Digital Productivity — Course Summary

A quick reference of what is covered and what you will learn in each session.

QUICK NAVIGATION

Session 01 — Google Drive Organisation

Session 02 — Gmail Management

Session 03 — Google Docs Sheets

Session 04 — Task Management

Session 05 — Workflow Automation

Session 06 — Capstone Productivity System

SESSION 01

Google Drive Organisation

Week 1 â€" Module: Cloud Storage and Email

WHAT YOU WILL LEARN

- ✓ **Explain in their own words** — what cloud storage is, using an analogy, and give at least two reasons why it is safer and more convenient than keeping files only on one computer.
- ✓ **Name and locate** — the main parts of the Google Drive interface â€" *My Drive*, *Shared with me*, *Recent*, *Starred*, *Trash* and the **+ New** button â€" without help.
- ✓ **Build a logical folder structure** — of at least five folders with nested subfolders for a fictional business, following the rule of shallow, predictable, numbered folders.
- ✓ **Apply a consistent file naming convention** — using the `YYYY-MM-DD - Project - Description - v1` format, and explain why `final_final_v3` and `Document1` are bad names.
- ✓ **Upload files and a folder** — to Google Drive using the **+ New** button and by dragging and dropping, then **move** each file into the correct folder.
- ✓ **Share a file and a folder** — and set the correct permission level (Viewer, Commenter or Editor), explaining the security danger of "Anyone with the link".
- ✓ **Find any file within 30 seconds** — using Drive search, search operators (`type:`, `owner:`, `is:starred`) and filters.
- ✓ **Use starring and folder colours** — to mark and visually organise important items.
- ✓ **Recover a file** — from the Trash and explain the 30-day deletion rule.

SESSION 02

Gmail Management

Week 1 â€" Module: Cloud Storage and Email

WHAT YOU WILL LEARN

- ✓ **Explain in their own words** — why an organised inbox matters, and describe the cost of an inbox left in chaos.
- ✓ **Navigate the Gmail interface** — â€" Inbox, Starred, Snoozed, Sent, Drafts, Spam, Trash, the Compose button, the category tabs (Primary, Social, Promotions, Updates, Forums) and the search bar.
- ✓ **Create labels** — , including **nested labels** (e.g. `Clients/Invoices`), and apply them to messages.
- ✓ **Create a filter** — that automatically labels, archives, stars or marks incoming mail, and explain what each filter action does.
- ✓ **Apply the inbox-zero strategy** — â€" process each email using archive, delete, reply, label or snooze â€" and clear a practice inbox to near zero.
- ✓ **Search Gmail effectively** — using operators such as `from:`, `subject:`, `has:attachment` and `is:unread`.
- ✓ **Distinguish** — between archiving, deleting and trashing an email, and explain when each is appropriate.
- ✓ **Create a professional signature** — and **save an email template** (Templates feature).
- ✓ **Schedule an email** — to send later, and **snooze** an email to return at a chosen time.
- ✓ **Explain the difference between Gmail labels and folders** — , and why labels are more flexible.

SESSION 03

Google Docs Sheets

Week 1 â€" Module: Cloud Storage and Email

WHAT YOU WILL LEARN

- ✓ **Create a document** — in Google Docs and give it a clear title, and explain that Docs **auto-saves** to Drive.
- ✓ **Format a document** — using the toolbar â€" font, size, bold/italic/underline, alignment, lists â€" and apply **heading styles** (Heading 1, 2, 3) to create structure.
- ✓ **Insert** — a table, an image and a hyperlink, and explain when each is useful.
- ✓ **Set up page settings** — and **export/download** a document as a **PDF** and as a **.docx** Word file.
- ✓ **Share a document** — with the correct role (Viewer, Commenter, Editor), and use **commenting** and **suggesting mode** for collaboration.
- ✓ **Use version history** — to view and restore an earlier version of a document, and explain what auto-save means for safety.
- ✓ **Create a spreadsheet** — in Google Sheets and identify **cells, rows, columns and ranges** using cell references like `B2`.
- ✓ **Enter and format data** — , including formatting numbers as **Naira (â‚¦)** currency.
- ✓ **Write basic formulas** — â€" `SUM`, `AVERAGE`, `MIN`, `MAX`, `COUNT` â€" and explain what each does.
- ✓ **Create a simple chart** — , **freeze a header row**, and **sort and filter** data.
- ✓ **Explain the difference** — between Docs and Sheets and choose the right tool for a task.

SESSION 04

Task Management

Week 2 â€" Module 3: Task Management and Workflow

WHAT YOU WILL LEARN

- ✓ **Explain in their own words** — why human memory and paper notebooks lose commitments, and why a digital task list prevents this.
- ✓ **Distinguish a task from a project** — , and give three examples of each, using a Nigerian small-business context.
- ✓ **Open Google Tasks** — in two ways â€" as a full page (`tasks.google.com`) and as the Gmail side panel â€" and describe the main parts of the screen.
- ✓ **Create a task** — with a clear title, written details (notes), a due date and a due time.
- ✓ **Break a large task into subtasks** — so that a big job becomes a short, doable checklist.
- ✓ **Prioritise** — using the star, the "Most Important Tasks" (MIT) method, and the Eisenhower matrix.
- ✓ **Organise tasks into lists** — that represent projects or contexts (for example `Shop`, `School`, `Personal`).
- ✓ **Perform a daily review** — and explain what the weekly review (the "weekly review ritual") adds.
- ✓ **Explain how Google Tasks keeps tasks in sync** — across a phone, a laptop and the academy desktop.
- ✓ **Convert a messy scenario** — (a list of scattered promises) into a clean, organised task system with dates and priorities.

SESSION 05

Workflow Automation

Week 2 â€" Module 3: Task Management and Workflow

WHAT YOU WILL LEARN

- ✓ **Define what a workflow is** — and give three examples of recurring workflows from a Nigerian small-business, school or church setting.
- ✓ **Document the current "as-is" workflow** — of a real recurring task using numbered steps.
- ✓ **Identify at least three repetitive, time-wasting activities** — in that workflow.
- ✓ **Design an improved "to-be" workflow** — that removes or shortens the wasted steps.
- ✓ **Create a Gmail filter** — that automatically labels and archives incoming mail, and apply it to existing messages.
- ✓ **Use a Google Drive template** — ("Make a copy") so the same document is never retyped from zero.
- ✓ **Set up a recurring Google Calendar event** — for a repeated routine.
- ✓ **Use a curated set of keyboard shortcuts** — in Chrome, Gmail, Docs and Sheets to work without the mouse.
- ✓ **Build and write a daily productivity routine** — that ties Drive, Gmail, Docs/Sheets and Tasks together.
- ✓ **Explain** — why automation should come *after* organisation, and describe the limits of what free tools can automate.

SESSION 06

Capstone Productivity System

Week 2 â€" Module 3: Task Management and Workflow

WHAT YOU WILL LEARN

- ✓ **Assemble a complete productivity system** — in one Google account, integrating Drive, Gmail, Docs, Sheets and Tasks.
- ✓ **Demonstrate an organised Google Drive** — with a logical folder structure, at least fifteen correctly named files, and at least one folder shared with the correct permission.
- ✓ **Demonstrate a managed Gmail** — with at least five labels, at least two filters, a professional signature, at least one saved email template, and an inbox below ten conversations.
- ✓ **Demonstrate Docs and Sheets competence** — â€" a formatted one-page business profile document and a spreadsheet with working formulas and naira formatting.
- ✓ **Demonstrate a task management system** — with three or more lists, at least ten dated tasks, three starred MITs and at least one task with subtasks.
- ✓ **Present a five-minute walkthrough** — of the complete system that clearly explains the decisions made.
- ✓ **Answer viva questions** — about the system accurately and honestly.
- ✓ **Self-assess** — against the capstone rubric and reflect on growth since Session 1.
- ✓ **Explain honestly** — what the CEA Certificate of Digital Productivity means â€" and what it does **not** mean.
