Course Roadmap

Session 01 — Online Teaching Foundations

Session 02 — Designing a Course and Planning a Lesson

Session 03 — Creating Learning Content

Session 04 — Running Live Classes and Engagement

Session 05 — Assessment Feedback and Learner Support

Session 06 — Capstone Design and Deliver a Mini Lesson

OVERVIEW

Course Roadmap

What we cover in every session

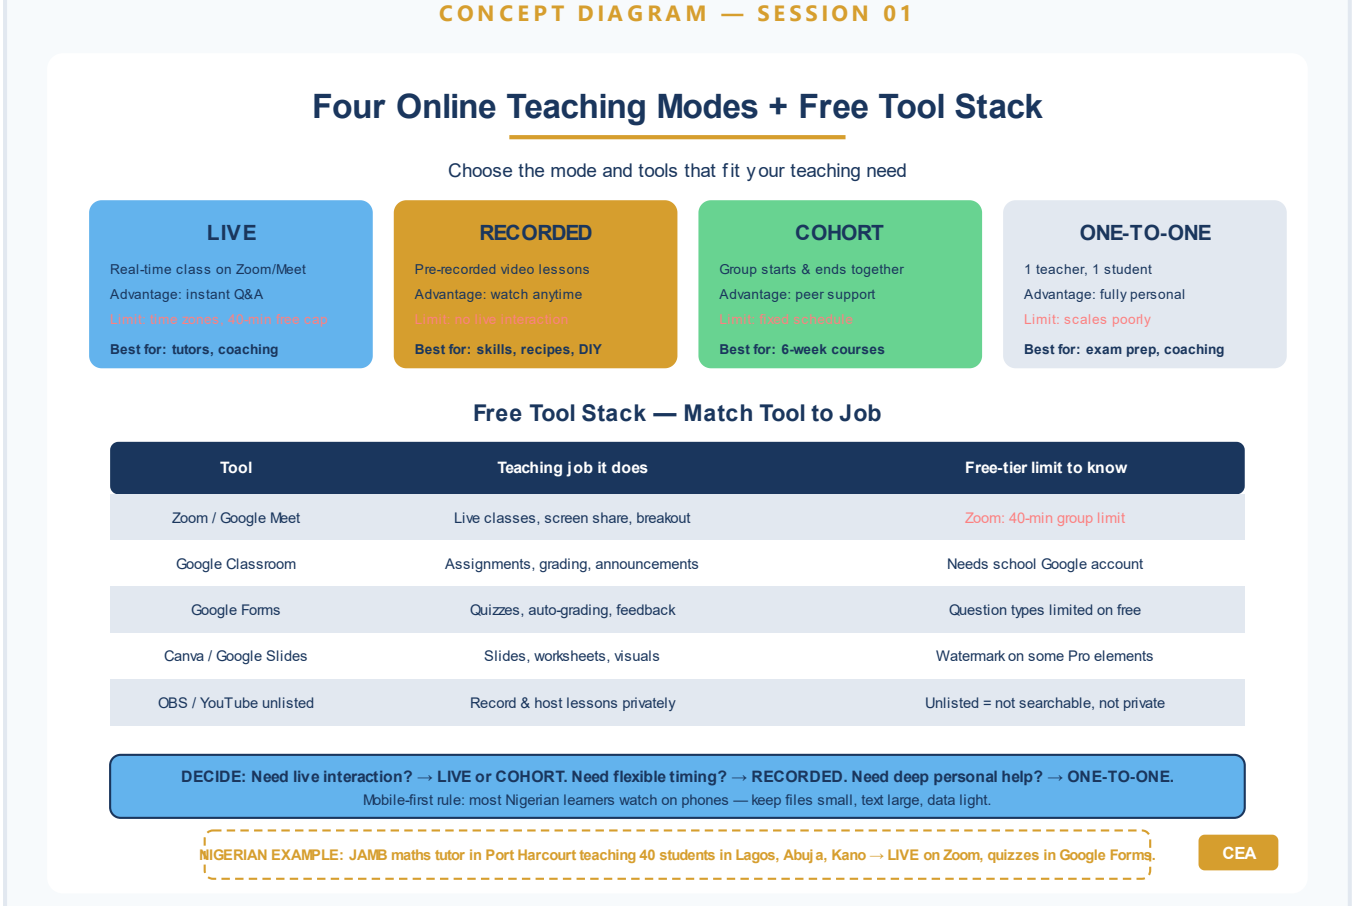

#	SESSION TOPIC	WEEK / MODULE	DURATION
01	Online Teaching Foundations	Week 1 â€" Module 1: Design and Set Up	105 minutes
02	Designing a Course and Planning a Lesson	Week 1 â€" Module 1: Design and Set Up	105 minutes
03	Creating Learning Content	Week 1 â€" Module 1: Design and Set Up	105 minutes
04	Running Live Classes and Engagement	Week 2 â€" Module 2: Deliver and Grow	105 minutes
05	Assessment Feedback and Learner Support	Week 2 â€" Module 2: Deliver and Grow	105 minutes
06	Capstone Design and Deliver a Mini Lesson	Week 2 â€" Module 2: Deliver and Grow	105 minutes

How to use this book: Each session below is a complete, ready-to-teach lesson note. Section A tells you what to prepare, B lists the outcomes, D–F are the teaching content, G–H are your demos and practicals, and the knowledge check with answer key is at the end. The concept diagram for each session is embedded as a visual aid.

SESSION 01 OF 6

Online Teaching Foundations

CONCEPT DIAGRAM — SESSION 01

CYBER ELIAS ACADEMY â€" ONLINE TEACHING

SESSION 1 â€" ONLINE TEACHING FOUNDATIONS

A. SESSION IDENTIFICATION

Item	Detail
Session number	1 of 6
Session title	Online Teaching Foundations
Week / Module	Week 1 â€" Module 1: Design and Set Up
Recommended duration	105 minutes
Difficulty level	Beginner (first contact with online teaching design)
Prerequisite knowledge	A smartphone or laptop and basic ability to use it (open an app, type, take a photo, browse). A free email account (Gmail preferred). Working microphone and speakers/earphones (the

Item	Detail
	bundled pair is fine). Something to teach â€" a real or fictional subject the learner genuinely knows. No prior teaching qualification, no prior Zoom/Classroom/Canva/OBS experience required.
Connection to previous work	This is the first session of the course. There is no previous session. It connects directly to everyday Nigerian life: nearly every learner has joined a WhatsApp tuition group, watched a church class online, or been asked to "take the class online" at short notice.
Preparation before class	Print the four mode cards (Section F.2) and the scenario cards (Section D) â€" one set per learner or projected. Prepare a projector with the mode comparison table ready. Have a sample completed decision card (Ngozi's, Section I) printed or projected. Confirm the academy Wi-Fi works and that learners can create free Gmail/Zoom accounts in class if needed. Prepare a short "what makes online teaching different" slide. Read the Course Design Document Section 15 (Ethics) before class.

Instructor note on tone: This session must feel *possible*, not overwhelming. Many learners arrive believing online teaching is "for tech people" or "needs expensive equipment." Your job in the first 105 minutes is to prove, with ordinary Nigerian examples, that if they can teach in a room, they can learn to teach online â€" with a phone and free tools. Keep the mood practical, warm and confident.

B. LEARNING OUTCOMES

By the end of this session, the learner will be able to:

1. **Explain** the four online teaching modes â€" **live**, **recorded**, **cohort** and **one-to-one** â€" in their own words, and give one advantage and one limitation of each.
2. **Name at least four free tools** (Zoom, Google Meet, Google Classroom, Google Docs/Slides, Google Forms, Canva, OBS, YouTube unlisted) and match each to the teaching job it does, including stating at least one free-tier limit (for example, Zoom's 40-minute group call ceiling).
3. **Select an appropriate mode and platform stack** for a stated Nigerian teaching need, giving clear reasons for the choice.
4. **Explain what makes online teaching different** from face-to-face teaching â€" shorter attention, distraction at home, mobile-first learners, screen fatigue, and participation that must be *designed* rather than assumed.
5. **Complete a mode + platform decision card** for their own course idea, recording the mode, the tools, the reasons, and the known limits.

C. REQUIRED MATERIALS

Hardware

- One smartphone per learner (with a notes app) or an academy laptop. Either is enough; both is ideal.
- Earphones with a microphone (the bundled pair is the baseline and is genuinely good enough for a first course).
- Instructor device connected to a projector or large screen.
- A quiet corner of the room for any short recording practice later in the course.

Software (all free or built-in)

- A web browser (Chrome preferred) for creating free accounts.
- Free **Gmail** account (opens Classroom, Docs, Forms, Meet).
- Free **Zoom** account *or* Google Meet (free with a Google account).
- Free **Canva** account (free elements only).
- **OBS Studio** or the device's built-in recorder (set up in S3).
- Free video hosting (YouTube **unlisted**) â€" set up in S3.

Sample files

- **Four mode cards** (Section F.2) â€" one per mode, printed or projected.

- **Four scenario cards** (Section D) â€" short teaching situations for the opening activity.
- **Mode comparison table** (Section F.2) â€" projected and printed.
- **Decision card template** (Section I) â€" one per learner, printed.
- **Ngozi's completed decision card** (Section I answer key) â€" instructor only.

Worksheets

- Worksheet 1.1 â€" "Four Modes Comparison Table" (a blank table: mode / what it is / advantage / limitation / best for).
- Worksheet 1.2 â€" "My Mode + Platform Decision Card" (the template in Section I).

Accounts

- None required to *start*. Learners create free Gmail/Zoom/Canva accounts during this session and S3 if they do not already have them. Nothing costs money.

Internet

- Academy Wi-Fi in class. The lesson works fully offline with printed mode cards and scenarios if the connection fails â€" the concepts are taught by discussion and movement, not by browsing.

Alternative for learners who lack a facility

- Any phone with a notes app works. A learner with only a phone and no laptop can complete every activity in this session. A learner who cannot type quickly may write by hand or dictate to a classmate; the skill is the *thinking*, not the typing.

Safety note for the instructor (read aloud at the start): Everything we discuss today uses free tools and fictional examples. We will not pay for any subscription, and no paid tool is ever a requirement in this course. We follow the academy's Ethics rules: we collect less, protect more, ask permission, credit the owner, and tell the truth.

D. OPENING ACTIVITY (6 minutes)

Instructor setup: Before class, place four large signs on four walls (or four corners of the room): **LIVE**, **RECORDED**, **COHORT**, **ONE-TO-ONE**. Do not explain them yet.

What the instructor says:

> *"Good morning, and welcome to Online Teaching at Cyber Elias Academy. Before we open any app or talk about any tool, we are going to do something physical. On the four walls of this room are four words. They are four different ways to teach online. I will read out four short teaching situations. For each one, I want you to* ***stand up and walk to the wall*** *that you think is the best fit. There are no wrong answers yet â€" we are learning. Ready?"*

Read the four scenarios one at a time. After each, give learners 20 seconds to move, then ask one or two people why they chose that wall.

1. *"A JAMB tutor in Port Harcourt wants to teach maths to 40 students in Lagos, Abuja and Kano â€" all at the same time, with him talking and them asking questions."* (Best fit: **LIVE**.)
2. *"A tailor wants to show learners how to take body measurements. She wants them to watch it whenever they are free, pause it, and rewatch it at midnight."* (Best fit: **RECORDED**.)
3. *"A church wants to run a six-week study class. Everyone starts together, everyone finishes together, and the group supports each other week by week."* (Best fit: **COHORT**.)
4. *"A coding mentor wants to help one student build a website, watching her code and giving personal feedback every week."* (Best fit: **ONE-TO-ONE**.)

Then reveal the hook: Say:

> *"You just sorted four real teaching situations into the four modes of online teaching. That is the whole idea of today:* ***there is no single 'online teaching' â€" there are four modes, and most good courses mix two of them.*** *By the end of this session, you will be able to look at any teaching situation and say: 'This is the mode I need, these are the tools I will use, and here is why.'"*

Expected learner response: Learners will move, laugh, and debate ("but a recorded video can also be watched by 40 people!"). Accept all answers warmly and use the debate: "Yes â€" and that is exactly why we compare modes properly today. A recorded video *can* reach 40 people, but they cannot ask you questions live. The mode you pick depends on what you need the learners to *do*."

Why this opener works: It gets learners moving, it uses familiar Nigerian contexts (JAMB, tailoring, church, coding), it introduces the four modes physically before any definition, and it frames the session as decision-making rather than software training.

E. PREREQUISITE REVIEW (7 minutes)

Run this as a fast oral round-robin. Put the questions on the projector.

Question 1: "What apps do you use every day on your phone? Name three."

- Expected answer: WhatsApp, Facebook, Instagram, YouTube, Gmail, Google Maps, a banking app.
- Common gap: some learners say "the internet" or "Google." Clarify: "Google is a search engine â€" a place you visit. WhatsApp is an app â€" a tool you open. Both are tools."

Question 2: "Have you ever joined a video call on WhatsApp, Zoom or Google Meet? What was it for?"

- Expected answer: family call, church service, a class, a work meeting.
- Common gap: some learners have only been participants, never hosts. Clarify: "Today we learn to be the **host** â€" the person running the class â€" not just a participant."

Question 3: "What is an email address for? Why do tools ask you to sign up with one?"

- Expected answer: it is your identity online; it lets the tool know who you are and save your work.
- Common gap: some learners think email is only for formal letters. Clarify: "A Gmail account is a **key** â€" it opens Classroom, Docs, Forms, Meet and more. One free account, many tools."

Question 4: "What does 'online' mean? Say it in your own words."

- Expected answer: on the internet; using the internet to do something.
- Common gap: none serious; accept all reasonable answers.

Bridge to today (say this):

> *"You already use the tools â€" WhatsApp, YouTube, a browser, maybe email. Today we do not add new tools. We add a new **way of thinking** about teaching with the tools you already have. We ask four questions: What are the four modes? What free tools do they need? What makes online teaching different from a classroom? And â€" most importantly â€" **which mode fits your teaching?**"*

If more than a third of the class cannot name three apps they use, spend 5 extra minutes letting learners open their phones and show each other their home screens before continuing.

F. FULL LECTURE NOTES

F.1 Why online teaching, why now â€" the Nigerian reality

The idea. Online teaching means teaching learners who are not in the same room as you, using the internet. It is not new, but in Nigeria it has moved from "something fancy schools do" to "something almost every teacher and trainer is expected to do" â€" often with no training.

Why it exists. Three gaps make online teaching necessary in Nigeria right now:

1. **Geography still limits teachers.** A good instructor in Port Harcourt can only reach people who can physically get to their shop, church or classroom. Online teaching removes that boundary â€" the same instructor can reach learners in Lagos, Abuja, Kano and the diaspora without paying rent for a second venue or buying a bus ticket.

2. **Skills training is still mostly in-person.** Tailoring, hairdressing, makeup, gele tying, cooking, phone repair and exam prep are taught face-to-face in tiny numbers â€" often one master and six apprentices. Online, an instructor can reach more learners at once, and the learners keep the material and can replay it at midnight.
3. **Free tools have quietly become good enough.** Zoom, Google Meet, Google Classroom, Docs, Forms, Canva and OBS are free and run on an ordinary Android phone or an old laptop. What is missing is not equipment â€" it is the **habit of designing for them**.

The honest promise. This course does not promise six figures a month. It promises a real, demonstrable skill: by the end, you will have built a small online course and taught part of it live or on recording. If you can teach it in a room, you can learn to teach it online â€" and you do not need to pay for a single subscription to do it.

Real-life comparison. Think of a **market woman in Port Harcourt**. She has two ways to sell: sit in her stall and wait for people to walk past, or take her goods to where the people are â€" a church, an office, a WhatsApp group. Online teaching is taking your teaching to where the people are. The learners are already online â€" on WhatsApp, on YouTube, on Instagram. The question is whether your teaching is there too.

Important limitation / misconception. "Online teaching does not work" is something people say after a bad experience â€" usually a 20-minute video of a bored voice, or a live class where everyone muted and vanished. Online teaching *does* work; it simply has to be **designed**. A classroom has walls, a blackboard and body language to help you. Online, you must design the attention, the interaction and the structure on purpose. That is what this course teaches.

F.2 The four modes of online teaching

The idea. There are four basic ways to teach online. Every online course you have ever taken is built from one or a mix of these four.

Plain-English definitions, with a table:

Mode	What it is	One advantage	One limitation	Best for
LIVE	Everyone is online at the same time, and you teach in real time â€" like a classroom, but through a screen.	Learners can ask questions and get answers immediately; it feels personal.	Everyone must be free at the same time; a bad connection ruins the moment.	Q&A sessions, discussions, demonstrations with feedback, exam-prep revision.
RECORDED	You record a lesson once, and learners watch it whenever they want â€" pause, rewind, rewatch.	Learners control the pace; you record once and it serves hundreds.	No live questions; you cannot see if they are confused.	Step-by-step skills (sewing, cooking, software), theory lessons, introductions.
COHORT	A group starts together and finishes together over a set period â€" weekly lessons, deadlines, group support.	Learners feel part of a group; deadlines keep them moving; you can build community.	You must run it on a schedule; if learners drop behind, they may drop out.	A six-week certificate class, a JAMB prep term, a church study series.
ONE-TO-ONE	You teach a single learner privately â€" personal feedback, personal pace.	Completely personalised; the learner's needs come first.	It does not scale â€" your time is the limit; it is the most expensive per learner.	Private tutoring, coaching, fixing a specific weakness, exam rescue.

Most courses mix two modes. This is the key insight. A pure live course is hard to schedule across time zones and busy lives. A pure recorded course can feel lonely and learners quit. So most good courses mix: for example, **recorded lessons + a weekly live Q&A** (this is what Ngozi chooses), or **a cohort with recorded lessons + live group sessions**. The mix is called a **blended** approach.

Real-life comparison. Think of a **restaurant**. A live class is like eating in the restaurant â€" fresh, interactive, but you must be there at opening time. A recorded class is like a packaged meal you heat at home â€" convenient, but no waiter to ask. A cohort class is like a supper club â€" a group that meets weekly for a month. A one-to-one class is like a personal chef â€" exactly what you want, but expensive per person. A good restaurant offers more than one of these. So should you.

Ngozi's mix (the running example). Ngozi Okpara runs *Style with Ngozi*, a tailoring business in Port Harcourt. She teaches six apprentices in her shop and wants to build a small online course â€" **"Sewing Basics: Cut and Sew Your First A-Line Skirt"** â€" with five short lessons, to reach learners in Lagos, Abuja and a cousin in Toronto. She owns a smartphone and an older laptop, her home data is slow, and she has never taught on Zoom. She plans to charge â‚¦4,500 per learner. Her mix: **five recorded lessons** (learners watch anytime, rewatch the hard parts) **+ one live Q&A session** (learners ask questions, she demonstrates answers). This is a **cohort-flavoured blend** â€" recorded for flexibility, live for connection.

Common misconception. "I must pick ONE mode." No â€" pick the **primary** mode and add a second for support. A recorded course with no live element loses learners; a live course with no recording excludes people who cannot attend. Design the mix around your learners' lives.

F.3 The free platform stack â€" what each tool does

The idea. You do not need expensive software. A small set of free tools covers everything: live classes, recorded lessons, slides, worksheets, quizzes and hosting. Here is the stack, what each tool does, and its honest free-tier limit.

Tool	Teaching job	Free-tier limit to know
Zoom	Live classes, screen share, polls, chat, breakout rooms, recording	Group calls limited to **40 minutes** on the free plan â€" design around it (one lesson per call, or restart).
Google Meet	Live and hybrid sessions	Free with a Google account; generous limits for ordinary class sizes.
Google Classroom	Assignments, submissions, class organisation	Free; the hub where learners find work and hand it in.
Google Docs / Slides	Worksheets, lesson plans, simple slides	Free; works on any device with a browser.
Google Forms	Quizzes with auto-grading	Free; instant marking, instant results.
Canva (free tier)	Slides, worksheets, certificates, graphics	Free; use **free elements only** â€" never pay.
OBS Studio	Screen and camera recording	Free and open source; the standard for recording lessons.
Built-in recorder	Phone screen/voice recording	Free, already on the device; the simplest option.
YouTube (unlisted)	Hosting recorded lessons	Free; **unlisted** means only people with the link can watch â€" not public.
WhatsApp / Telegram	Reminders and learner community	Free; used carefully under the Ethics rules.

The "no paid subscription" rule. A central promise of this course is that **no learner has to pay for a subscription to complete it.** Where a tool has a paid tier, we teach the free tier and are honest about its limits. A learner may later choose to pay for advanced tools, but it is **never a requirement and never a condition of passing.**

Real-life comparison. Think of building a **house**. You do not need to buy the whole hardware store on day one. You need a hammer, a saw, a tape measure and a level â€" the right tool for each job. The free stack above is that toolbox. Zoom is the hammer for live classes; Canva is the level for slides; OBS is the saw for recording; Google Forms is the tape measure for quizzes. You do not need a â‚¦500,000 professional studio. You need the right free tool for each job.

Common misconception. "Free tools are not professional." False. Schools, churches, NGOs and businesses across Nigeria run real classes on these exact tools every day. Professionalism comes from **how you design and deliver**, not from what you paid.

F.4 What makes online teaching different

The idea. Online teaching is not "face-to-face teaching through a screen." It is a different environment with different rules. If you copy your classroom habits exactly, the class will fail. Here is what is different â€" and what to do about it.

What is different	What it means	What to do
Shorter attention	In a room, you can read the class. Online, attention drops faster â€" studies and experience suggest 5â€"10 minute blocks, not 45-minute lectures.	Break lessons into short blocks with a change of activity between them.
Distraction at home	Learners are at home â€" children, generators, WhatsApp, doorbells. Their attention is divided.	Keep lessons short, visual and active; assume they will multitask and design for it.
Mobile-first learners	Many learners will join on a phone, not a laptop. Small screen, small text, expensive data.	Design for the phone first: large text, small files, low-data options.
Screen fatigue	Staring at a screen is tiring. After 30â€"45 minutes, everyone is tired.	Keep sessions short; build in pauses; do not schedule three-hour online marathons.
Participation must be designed	In a room, you can see a raised hand. Online, silence is easy and invisible. Nobody "just joins in."	Plan every interaction: a poll, a chat question, a show of hands, a breakout task. If you do not design it, it will not happen.
Bandwidth and data	Nigerian data is expensive and connections are uneven. A 500MB video is a barrier.	Compress files, offer downloadable alternatives, host unlisted, keep videos short.

Real-life comparison. Teaching online is like **radio**, not like a classroom. On radio, you cannot see your listeners. You must *imagine* them, *speak to* them, and *ask them to do things* â€" "call in now," "text this number." If you just talk for 30 minutes, your listeners switch stations. Online teaching is the same: you must design the moments where the learner *does* something, or they will switch off â€" and switching off online is silent and invisible.

The most important sentence of this session: Silence online is usually a design failure, not a learner failure. If nobody is answering, the problem is rarely "the learners are lazy." The problem is almost always "I did not design a moment for them to respond." You will learn to design those moments in Sessions 2 and 4.

F.5 Opportunities for Nigerian teachers and trainers

The idea. Online teaching is not just a way to survive â€" it is a way to grow. Here are the real opportunities open to Nigerian teachers and trainers, with the honest limits.

1. **Reach beyond your city.** A JAMB tutor in Port Harcourt can teach a student in Kano. A hairdresser in Benin can sell a recorded class to a learner in London. The internet removes the wall around your classroom.
2. **Paid exam-prep and skill classes.** JAMB, WAEC, NECO, IELTS and entrance candidates pay for good preparation. A well-run online class â€" recorded lessons + live revision â€" can earn real money. Charge honestly, deliver well, and your reputation grows.
3. **Serve a church, mosque or NGO across locations.** A church with branches in three states can train all its teachers from one place. An NGO can train community workers without flying them to Lagos.
4. **Build a diaspora audience.** Nigerians abroad want their children to learn languages, culture and skills. A recorded class serves them in their time zone â€" they watch at 6pm Canadian time, you sleep.
5. **Create once, serve many.** A recorded lesson you make once can serve 10 learners or 10,000. Your time is the only limit â€" and even that is reduced by good design.

The honest limit. Online teaching does not guarantee income. It gives you a **skill** and a **reach**. What you build with them â€" your quality, your honesty, your marketing â€" determines the income. This course teaches the skill. It does not promise earnings, and anyone who says a two-week course guarantees money is not being told the truth.

Say this to the class:

> *"The scammer is not smarter than you. The scammer is patient. In teaching, the same is true: the instructor who succeeds is*

> *not always the most talented â€" it is the one who **designs** the best. Today you start learning to design."*

F.6 Summary of the lecture

- **Online teaching** means teaching learners who are not in the same room, using the internet â€" and it is now a normal skill for Nigerian teachers and trainers.
- There are **four modes**: live, recorded, cohort, one-to-one â€" each with an advantage and a limitation.
- **Most good courses mix two modes** â€" for example, recorded lessons + a live Q&A.
- A small set of **free tools** covers everything: Zoom/Meet for live, Classroom for organisation, Docs/Slides for content, Forms for quizzes, Canva for design, OBS for recording, YouTube unlisted for hosting.
- **No paid subscription is ever required** in this course.
- Online teaching is **different**: shorter attention, home distraction, mobile-first learners, screen fatigue, and participation that must be designed.
- The opportunities are real â€" reach beyond your city, paid exam-prep, church/NGO training, the diaspora â€" but income is not guaranteed; the skill is what you earn today.

    B[Recorded] --> D
    C[Cohort] --> D
    D --> E[Reach more learners]
```

G. INSTRUCTOR DEMONSTRATION (15 minutes)

Goal: Walk the class through building a **mode + platform decision card** for Ngozi's sewing course, thinking aloud so learners see *how* a trained mind makes the decision. The finished card is the model for their own work.

Setup: Project the blank decision card template (Section I). Have the four mode cards visible. Have Ngozi's situation on screen:

> *Ngozi Okpara runs Style with Ngozi, a tailoring business in Port Harcourt. She teaches six apprentices in her shop. She wants to build a small online course â€" "Sewing Basics: Cut and Sew Your First A-Line Skirt" â€" with five short lessons, to reach learners in Lagos, Abuja and a cousin in Toronto. She owns a smartphone and an older laptop, her home data is slow, and she has never taught on Zoom. She plans to charge â‚¦4,500 per learner.*

G.1 Step 1 â€" Define the need (3 minutes)

Say: "Before we pick a mode or a tool, we define the need. What must the learners be able to *do* at the end?"

Write on the board:

- **Who:** Adult beginners who want to sew their first skirt â€" in Lagos, Abuja, Toronto.
- **What they must do:** Cut and sew a basic A-line skirt using their own body measurements.
- **Constraints:** Ngozi has a phone and an old laptop; slow home data; never taught online; learners are busy adults.

Say: "The need drives everything. A mode that needs fast internet is wrong for slow data. A mode that needs everyone online at once is wrong for busy adults in different time zones."

G.2 Step 2 â€" Compare the modes against the need (4 minutes)

Say: "Now we test each mode against the need. Live? Learners are in three time zones and busy â€" a fixed live time is hard. Recorded? Yes â€" they can watch anytime, pause, rewatch the measuring part. Cohort? Yes â€" a group starting together keeps them moving. One-to-one? No â€" Ngozi wants to reach many learners, not one."

Fill the comparison on the board:

Mode	Fits?	Why
Live	Partly	Good for Q&A, but hard to schedule across time zones.
Recorded	Yes	Learners watch anytime; rewatch hard parts; suits busy adults.
Cohort	Yes	A group finishing together keeps motivation.
One-to-one	No	Does not scale; Ngozi wants many learners.

G.3 Step 3 â€" Choose the mix (3 minutes)

Say: "So Ngozi's mix is: **five recorded lessons + one live Q&A session**, run as a small cohort over two weeks. The recorded lessons do the teaching; the live Q&A does the connection. This is a blended cohort model."

Write the decision:

- **Primary mode:** Recorded (five short lessons).
- **Secondary mode:** Live (one Q&A session, optional but encouraged).
- **Cohort flavour:** The group starts and finishes together over two weeks.

G.4 Step 4 â€" Pick the free tools (3 minutes)

Say: "Now the tools â€" one job at a time, all free."

Job	Free tool	Why
Host live Q&A	**Zoom** (free)	Screen share, chat, polls; 40-minute limit is fine for a Q&A.
Record lessons	**OBS** or phone's built-in recorder	Free; records screen + voice.
Host recordings	**YouTube (unlisted)**	Free; only people with the link can watch; low-data friendly.
Slides for lessons	**Canva** (free) or **Google Slides**	Free; phone-readable slides.
Worksheets	**Google Docs**	Free; learners fill in and submit.
Reminders & community	**WhatsApp group**	Free; where the learners already are.

Say: "Notice: every tool is free. Ngozi pays â‚¦0 for software. Her only costs are her time and her data."

G.5 Step 5 â€" Note the limits and the plan (2 minutes)

Say: "Finally, we write down the honest limits and the plan to handle them."

- **Zoom 40-minute limit:** The Q&A is 30 minutes â€" inside the limit. If it runs long, restart the call.
- **Slow data:** Keep recordings short (5â€"8 minutes), compress them, host unlisted so they buffer less.
- **Never taught online:** Ngozi will practise with one learner first (Session 4).

The finished decision card (project it):

> ***NGOZI'S MODE + PLATFORM DECISION CARD***
>
> - ***Course:*** *Sewing Basics: Cut and Sew Your First A-Line Skirt*
> - ***Learners:*** *Adult beginners in Lagos, Abuja, Toronto*
> - ***Primary mode:*** *Recorded â€" five short lessons (learners watch anytime, rewatch)*
> - ***Secondary mode:*** *Live â€" one 30-minute Q&A on Zoom*
> - ***Cohort flavour:*** *Group starts and finishes together over two weeks*
> - ***Tools:*** *Zoom (live), OBS/built-in recorder (recording), YouTube unlisted (hosting), Canva/Slides (slides), Google Docs (worksheets), WhatsApp (community)*
> - ***Limits & plan:*** *Zoom 40-min limit â†' keep Q&A to 30 min; slow data â†' short compressed videos; first time teaching â†' practise with one learner first*
> - ***Cost of software:*** *â‚¦0*

Questions to ask during the demo:

- "Why not one-to-one?" (It does not scale â€" Ngozi wants many learners.)
- "Why recorded first, not live?" (Learners are busy and in different time zones; recorded fits their lives.)
- "What happens if the Zoom Q&A hits 40 minutes?" (Restart the call â€" it takes 10 seconds.)
- "What does Ngozi pay for software?" (Nothing â€" â‚¦0.)

Expected result: Learners see that a decision card is not a guess â€" it is a **reasoned argument** from need â†' modes â†' mix â†' tools â†' limits. They now have a model to copy for their own course.

H. GUIDED PRACTICAL EXERCISE (18 minutes)

Objective: With the instructor guiding, each learner fills in the **Four Modes Comparison Table** (Worksheet 1.1) for their own course idea, then begins their own decision card.

Starting materials: Worksheet 1.1 (printed), a pen, and the learner's own course idea (from the opening activity or their own life). The instructor projects the blank table.

Procedure (instructor calls out each step; learners follow; instructor walks the room):

1. Write your name and your **course idea** at the top of the worksheet â€" one sentence: "I want to teach _____ to _____."
2. Fill in the **"What it is"** column for all four modes, in your own words. (If you get stuck, look at the mode cards on the wall.)
3. Fill in **one advantage** and **one limitation** for each mode. Be honest â€" there are no perfect modes.
4. Now ask: **"Which mode fits my learners' lives?"** Write one sentence: "My learners are _____, so _____ mode fits because _____."
5. Choose your **primary mode** and (if you want) a **secondary mode**. Circle them.
6. **Pause and predict:** Cover your paper and ask yourself: "If I taught this mode for real, what would go wrong?" Write one risk.
7. Share your primary mode with the person beside you. If you chose different modes, explain why.

Expected result: A completed comparison table and a first draft of a mode choice for their own course.

Points to pause on and predict:

- After step 4: "Who chose recorded? Who chose live? Why?" (Hear at least three different reasons.)
- After step 6: "What is the risk you wrote down?" (Common answers: "learners won't show up," "my internet will fail," "I don't know how to record." Say: "Good â€" naming the risk is the first step to fixing it. We fix these in Sessions 3, 4 and 5.")

Troubleshooting while walking the room:

- Learner leaves the advantage/limitation columns blank â†' Point to the mode cards on the wall and ask: "What is one good thing about live? What is one bad thing?"
- Learner chooses a mode they cannot explain â†' Ask: "Why that mode and not the others?" If they cannot answer, they are guessing â€" send them back to step 4.
- Learner says "all of them" â†' Clarify: "You can *mix* two, but you must pick one **primary** â€" the one that does most of the teaching."

Completion checklist (learner ticks each):

- ☐ Course idea written in one sentence
- ☐ All four modes described in my own words
- ☐ One advantage and one limitation for each mode
- ☐ Primary mode chosen with a reason
- ☐ One risk named
- ☐ Shared my choice with a partner

I. INDEPENDENT CLASS EXERCISE (15 minutes)

Task (new task, done alone): Complete your own **Mode + Platform Decision Card** (Worksheet 1.2) for your course idea, using the structure of Ngozi's card in Section G.

Scenario. You are the instructor. Your course idea is your own â€" it can be real (a JAMB class you actually run, a skill you actually teach) or fictional (a course you would love to build). You have a smartphone or laptop, free tools only, and learners who are busy adults with phones and uneven internet.

Requirements:

1. Write your **course title** and **target learners** (who exactly, and where they are).
2. Choose a **primary mode** and a **secondary mode** (if any), with a one-sentence reason for each.
3. Choose your **free tools** â€" one for each job (live, recording, hosting, slides, worksheets, community).
4. Write down **two limits** of your chosen tools and **one plan** for each limit.
5. State your **software cost** in naira (it should be â‚¦0).

Time allowance: 15 minutes.

Success criteria:

- Card is complete: title, learners, modes, tools, limits, plan, cost.
- Every choice has a reason.
- All tools are free.
- The limits are honest and the plans are practical.

Hints if stuck:

- Hint 1: Start with the learners' lives â€" where are they, when are they free, what device do they use?
- Hint 2: Copy Ngozi's card structure, but change every answer to fit *your* course.
- Hint 3: If you cannot decide between two modes, pick the one that fits the learners' *schedule* â€" that is usually the right answer.

INSTRUCTOR ANSWER KEY (model solution â€" do not show learners):

> ***MODEL DECISION CARD â€" NGOZI OKPARA (for reference)***
>
> - ***Course:*** *Sewing Basics: Cut and Sew Your First A-Line Skirt*
> - ***Target learners:*** *Adult beginners in Lagos, Abuja and Toronto; busy; mostly on phones*
> - ***Primary mode:*** *Recorded â€" five short lessons (5â€"8 minutes each), learners watch anytime and rewatch*
> - ***Secondary mode:*** *Live â€" one 30-minute Q&A on Zoom, optional but encouraged*
> - ***Cohort flavour:*** *Group starts and finishes together over two weeks*
> - ***Tools:*** *Zoom (live Q&A), OBS/phone recorder (recording), YouTube unlisted (hosting), Canva free (slides), Google Docs (worksheets), WhatsApp group (community)*
> - ***Limits & plans:*** *(1) Zoom free limits group calls to 40 minutes â†' keep Q&A to 30 minutes, restart if needed. (2) Slow home data â†' keep videos short, compress them, host unlisted.*
> - ***Software cost:*** *â‚¦0*

Learner marking (out of 10):

- Clear course title and target learners (2)
- Primary + secondary mode chosen with reasons (3)
- Free tools matched to jobs (2)
- Two honest limits with practical plans (2)
- Software cost stated as â‚¦0 (1)

J. REAL-WORLD CASE STUDY

Situation. *Emeka* is a JAMB mathematics tutor in Port Harcourt. He teaches 12 students in a rented classroom twice a week and charges â‚¦15,000 per student per term. His classroom is full, and he has a waiting list â€" but he cannot fit more students into the room. A former student now in Abuja messages him: "Sir, I wish I could still attend your class." Emeka thinks: *what if I could teach the Abuja students too?*

Relevant facts.

- Emeka is a strong teacher â€" his students' JAMB scores are good, and parents trust him.
- He has a laptop and a smartphone, and he uses WhatsApp daily.
- His students are secondary school leavers, 16â€"19 years old, most of them on mobile data.
- He has never recorded a lesson or hosted a live online class.
- He worries: "Will online students take me seriously? Will they pay the same â‚¦15,000?"

Decision point. Emeka wants to grow beyond his 12-seat classroom. What mode and tools should he choose?

Possible approaches.

1. **Record his classroom lessons and sell the videos.** He films his existing classes and sells access to the recordings.
2. **Add a live online class.** He runs a second, live class on Zoom for students in Abuja and beyond, at the same time as his physical class.
3. **Do nothing different â€" just tell the Abuja students to come to Port Harcourt.**
4. **Build a blended cohort:** recorded lessons for the teaching + a weekly live revision class on Zoom.

Recommended solution. Approach 4 â€" a blended cohort. Here is the reasoning:

- **Why not 1 (recorded only)?** Recorded lessons alone are hard to sell at â‚¦15,000 â€" learners expect interaction at that price, and without it they drop out. Also, recording a live classroom is noisy and hard to hear.
- **Why not 2 (live only)?** A live class at a fixed time excludes students in other time zones and those with bad internet at that moment. It also doubles Emeka's teaching hours without doubling his reach efficiently.
- **Why not 3?** It is the safe option, but it caps Emeka at 12 students and ignores the waiting list and the Abuja demand.
- **Why 4?** Recorded lessons let Emeka teach once and serve many â€" the Abuja students, the waiting list, and future terms. A weekly live revision class on Zoom gives the interaction that justifies the fee and keeps learners accountable. The cohort structure (a term with a start and end date) creates deadlines and community.

Emeka's decision card (the fix):

- **Primary mode:** Recorded â€" one lesson per week, 10â€"15 minutes, uploaded to YouTube unlisted.
- **Secondary mode:** Live â€" one 45-minute revision class on Zoom every Saturday.
- **Cohort:** A 10-week JAMB term; students start and finish together.
- **Tools:** OBS/phone recorder, YouTube unlisted, Zoom, WhatsApp group for reminders.
- **Price:** â‚¦15,000 for the term â€" same fee, more students, no bigger room.

Trade-offs.

- Approach 4 requires Emeka to learn two new skills: recording and hosting. That is exactly what this course teaches â€" and he can learn them in six sessions.
- The first term will be imperfect. That is normal. The goal is a *teachable* first version, not a perfect one.
- Recording once and serving many means his income can grow without his hours growing â€" the core advantage of online teaching.

Professional connection. This is the pattern behind most successful small online courses in Nigeria: **a recorded core + a live connection + a cohort for accountability.** Master this pattern and you can teach almost any subject online â€" tailoring, JAMB, phone repair, cooking, Excel, anything you genuinely know.

K. COMMON MISTAKES AND TROUBLESHOOTING

Use this table as the live guide. Point learners to the row rather than giving the answer.

K.1 Thinking "online teaching" means only live video calls

Symptoms: Learner plans a course that is only live classes, then struggles to schedule them. **Likely cause:** They have only ever seen live classes (church streams, Zoom meetings) and assume that is the whole of online teaching. **How to investigate:** Ask: "What are the four modes?" If they can only name "live," they have missed the point. **Corrective steps:** Re-teach the four modes with the mode cards. Show that recorded, cohort and one-to-one are equally valid. **How to confirm resolved:** Learner can name all four modes and give one advantage of each. **Prevention:** Always start with the four modes before any tool.

K.2 Choosing tools before choosing a mode

Symptoms: Learner says "I will use Zoom" before saying what they are teaching or to whom. **Likely cause:** Tools are exciting; modes are abstract. It feels easier to pick an app than to think about learners. **How to investigate:** Ask: "What mode is your course?" If they cannot answer, the tool choice is a guess. **Corrective steps:** Send them back to the decision card: need â†' modes â†' mix â†' tools. Tools come last. **How to confirm resolved:** Learner can explain why they chose each tool for a specific job. **Prevention:** Never let a learner name a tool before they have named their learners and their primary mode.

K.3 Ignoring free-tier limits

Symptoms: Learner plans a 90-minute live class on free Zoom, or a public YouTube channel for private lessons. **Likely cause:** They have not read the free-tier limits. **How to investigate:** Ask: "How long is a free Zoom group call?" If they do not know, they have not checked. **Corrective steps:** Teach the limits: Zoom free = 40 minutes for group calls; YouTube unlisted â‰ public. Design around them. **How to confirm resolved:** Learner states the limit of each tool they chose and a plan for it. **Prevention:** Put the limits table (Section F.3) on the wall and refer to it every session.

K.4 Assuming learners have laptops and fast internet

Symptoms: Learner designs a course that needs a laptop, a big screen and unlimited data. **Likely cause:** They designed for themselves, not for their learners. **How to investigate:** Ask: "What device and data do your learners actually have?" If they do not know, they have not asked. **Corrective steps:** Teach mobile-first design: phones, expensive data, uneven connections. Design for the weakest learner. **How to confirm resolved:** Learner can state their learners' devices and data reality and has designed for it. **Prevention:** Ask "who are your learners?" before any design decision.

K.5 Copying classroom habits exactly

Symptoms: Learner plans a 45-minute online lecture with no interaction. **Likely cause:** They are teaching the way they were taught, not the way online works. **How to investigate:** Ask: "What will the learners *do* in minute 20?" If the answer is "listen," the design is wrong. **Corrective steps:** Teach the differences (Section F.4): shorter blocks, designed participation, mobile-first. **How to confirm resolved:** Learner's plan has a change of activity at least every 8â€"10 minutes. **Prevention:** Repeat: "Silence online is a design failure."

K.6 Believing online teaching guarantees income

Symptoms: Learner expects to get rich quickly and is discouraged when the first class is small. **Likely cause:** They have heard "make money online" promises and not the honest limits. **How to investigate:** Ask: "What does this course promise?" If they say "money," correct them. **Corrective steps:** Restate the honest promise: this course teaches a skill; income depends on quality, honesty and effort over time. **How to confirm resolved:** Learner can state what the certificate does and does not mean. **Prevention:** Repeat the honest statement in every session.

Distinguish likely vs confirmed: A "likely cause" becomes "confirmed" only after you check it â€" for example, the learner can actually name the four modes, or actually state their learners' devices. Teach learners to confirm before concluding.

L. SESSION ASSIGNMENT

Assignment title: "My Course Idea and Mode + Platform Decision Card"

Purpose: To practise choosing a mode and a free-tool stack for a real teaching need â€" the first building block of the capstone's delivery plan.

Realistic scenario. You are an instructor with something to teach. It can be real (a class you run now, a skill you have) or fictional (a course you would love to build). You have a smartphone or laptop, free tools only, and learners who are busy adults with phones and uneven internet. Your job is to decide *how* this course will run before you build anything.

Detailed instructions:

1. Write a **one-page course idea**: the title, what learners will be able to do at the end, who the learners are (age, location, device), and what you will charge (in naira â€" be realistic).
2. Complete a **Mode + Platform Decision Card** with: primary mode, secondary mode (if any), one reason for each, the free tools you will use (one per job), two limits of those tools, one plan for each limit, and your software cost in naira.
3. Write **one paragraph** (5â€"7 sentences) explaining: "Why is this the right mode and these the right tools for *my* learners?"

4. Write **one sentence** on the biggest risk you face and how you will handle it.

Required deliverables:

- A one-page course idea.
- A completed Mode + Platform Decision Card.
- One paragraph of reasoning.
- One risk sentence.

Submission format: Save as `A1_YourName.docx` (or `.pdf` or handwritten and photographed clearly) and upload to `/Online-Teaching/Week1/A1/`. You may also paste the text into your workbook.

Deadline: Before Session 2.

Marking rubric (10 marks):

Criterion	Marks	Description of a strong answer
Course idea is clear	2	Title, learners, outcome and price all stated and realistic
Mode choice with reasons	3	Primary + secondary mode chosen; reasons fit the learners' lives
Free tools matched to jobs	2	One free tool per job; no paid tools
Limits and plans	2	Two honest limits, each with a practical plan
Reasoning paragraph	1	Clear, specific, in the learner's own words

Common mistakes to avoid: choosing tools before modes; ignoring free-tier limits; designing for yourself instead of your learners; vague reasons ("because it is good"); expecting the assignment to make you rich.

INSTRUCTOR REFERENCE SOLUTION (do not show learners):

> ***Course idea:*** *"JAMB Mathematics Crash Class" â€" a 6-week online class for 30 secondary school leavers in Port Harcourt, Lagos and Abuja. Learners will be able to solve 20 JAMB-style maths problems in 60 minutes. Fee: â‚¦12,000 per learner.*
>
> ***Decision card:***
>
> - *Primary mode: Recorded â€" one 15-minute lesson per week, uploaded to YouTube unlisted, learners watch anytime.*
> - *Secondary mode: Live â€" one 45-minute revision class on Zoom every Saturday.*
> - *Cohort: 6-week term with a start and end date.*
> - *Tools: OBS/phone recorder (recording), YouTube unlisted (hosting), Zoom (live), Google Docs (practice problems), WhatsApp group (reminders).*
> - *Limits & plans: (1) Zoom 40-minute limit â†' keep live class to 40 minutes, use the last 5 for a WhatsApp voice note. (2) Learners on mobile data â†' keep videos under 15 minutes, compress them.*
> - *Software cost: â‚¦0.*
>
> ***Reasoning:*** *My learners are 16â€"19, busy, and on mobile data in three cities. A fixed live time would exclude some of them, so the teaching must be recorded â€" they can watch on the bus, at night, twice if they need to. But recorded alone feels lonely and they will not pay â‚¦12,000 for videos they never watch, so a weekly live revision class keeps them accountable and gives them a teacher to ask. The cohort structure â€" a 6-week term â€" creates a deadline, and deadlines are what make learners finish.*
>
> ***Risk:*** *The biggest risk is that learners sign up and never watch. I will handle it by sending a WhatsApp reminder every Monday and by making the first live class free and friendly, so they fall into the habit.*

M. KNOWLEDGE CHECK

(Learner version â€" answers only in the Instructor Key below.)

Q1. Short answer. Name the four modes of online teaching.

Q2. Multiple choice. Which mode is best for a learner who wants to watch a lesson at midnight, pause it, and rewatch it? a) Live b) Recorded c) Cohort d) One-to-one

Q3. Explain in your own words. What is one advantage and one limitation of live teaching?

Q4. Practical. A church wants to run a six-week study class where everyone starts and finishes together. Which mode fits best, and why?

Q5. Matching. Match each tool to its job: **Zoom, Google Forms, Canva, OBS, YouTube (unlisted).** a) Recording a lesson b) Hosting a live class c) Designing slides d) Auto-grading a quiz e) Hosting a recorded video privately

Q6. Scenario. Your cousin wants to teach one student to build a website, with personal feedback every week. Which mode should she use, and what is one free tool she could use for the live sessions?

INSTRUCTOR ANSWER KEY (Q1â€“Q6)

A1. Live, recorded, cohort, one-to-one.

A2. (b) Recorded. (The learner controls the time and can pause and rewatch.)

A3. Advantage: learners can ask questions and get answers immediately; it feels personal and interactive. Limitation: everyone must be free at the same time, and a bad connection ruins the moment. (Accept any correct advantage + limitation pair.)

A4. Cohort. Because a cohort is a group that starts and finishes together over a set period â€” exactly what a six-week church study class needs. The group support and shared deadlines keep learners moving.

A5. Zoom = (b) hosting a live class; Google Forms = (d) auto-grading a quiz; Canva = (c) designing slides; OBS = (a) recording a lesson; YouTube unlisted = (e) hosting a recorded video privately.

A6. One-to-one. Because it is a single learner who needs personal feedback and a personal pace. Free tool for the live sessions: Zoom (free tier) or Google Meet. (Accept either.)

N. REFLECTION AND RECAP

Plain-English summary. Today you learned that online teaching is not one thing â€” it is **four modes**: live, recorded, cohort and one-to-one. Each mode has an advantage and a limitation, and most good courses **mix two** â€” like Ngozi's recorded lessons plus a live Q&A. You learned the **free tool stack** â€” Zoom, Meet, Classroom, Docs, Forms, Canva, OBS, YouTube unlisted â€” and the honest rule that **no paid subscription is ever required**. You learned what makes online teaching **different**: shorter attention, home distraction, mobile-first learners, screen fatigue, and participation that must be designed. And you learned the opportunities â€” reach beyond your city, paid exam-prep, church and NGO training, the diaspora â€” with the honest limit that income is not guaranteed. You finished by completing your own **mode + platform decision card**.

Five important takeaways:

1. **Four modes:** live, recorded, cohort, one-to-one â€” know them, compare them, mix them.
2. **Most courses blend two modes** â€” recorded for flexibility, live for connection.
3. **Free tools are enough** â€” the stack covers everything, and â‚¦0 is a valid software budget.
4. **Online is different** â€” design for short attention, phones and distraction; silence is a design failure.
5. **The decision comes first** â€” need â†’ modes â†’ mix â†’ tools â†’ limits. Never tools first.

Questions to help you recognise what you can now do:

- Can I name the four modes and give one advantage of each?
- Can I explain why most courses mix two modes?
- Can I name four free tools and the job each does?
- Can I state one free-tier limit and a plan for it?
- Can I explain what makes online teaching different from a classroom?
- Can I complete a decision card for my own course idea?

Connection to the next session. You now know *how* your course will run. But what exactly will you teach, and how will you structure it? Next session â€” **Designing a Course and Planning a Lesson** â€” you will learn to write **measurable learning outcomes** (the difference between "understand sewing" and "cut and sew a basic A-line skirt using three measurements you

took yourself"), build a **curriculum map** that proves every outcome is taught, and plan a **timed lesson** that works online. Bring your decision card â€" you will build on it.

O. INSTRUCTOR EVALUATION NOTES

Observable signs of genuine competence:

- Learner names all four modes correctly and gives a reason for each choice, not just a label.
- Learner chooses a mode that fits the learners' *lives* (schedule, device, data), not the instructor's preference.
- Learner names at least four free tools and matches each to a job.
- Learner states a free-tier limit (e.g., Zoom 40 minutes) and a practical plan for it.
- Learner completes the decision card with reasons for every choice.
- Learner explains what makes online teaching different in their own words.

Common misconceptions to watch for and correct:

- "Online teaching = live video calls." â†' There are four modes; live is only one.
- "I must pick one mode." â†' Most courses mix two; pick a primary and a secondary.
- "Free tools are not professional." â†' Professionalism comes from design, not price.
- "I should choose the tool I know best." â†' Choose the mode first, then the tool that fits the job.
- "My learners have laptops and fast internet." â†' Design for the weakest learner: a phone and expensive data.
- "Online teaching will make me rich." â†' It teaches a skill; income depends on quality and effort over time.

Suggested remedial exercises for learners who struggle:

1. **Mode sorting drill:** give five short scenarios on cards; the learner sorts them into the four modes and explains one reason each.
2. **Tool matching drill:** give six tools and six jobs; the learner matches them and says why.
3. **Limit check:** give three tools; the learner states the free-tier limit of each and one plan.

Differentiation:

- **Level 1 (supported):** provide a partially completed decision card (modes and tools already listed); the learner chooses and gives reasons. Allow the learner to work with a partner.
- **Level 2 (standard):** the session as written â€" full decision card with reasons, limits and plans.
- **Level 3 (challenge):** ask the learner to design **two different mode/tool options** for the same course and compare them in a short paragraph, recommending one with reasons. (This builds real decision-making skill.)

Capstone links. The decision card completed today becomes the **"delivery mode and tools" section** of the capstone mini-course outline in Session 6. A learner who completes it well already owns one piece of the final submission. Remind learners to keep every artefact in their working folder (`CEA-OT-FirstnameLastname`).

Timing guidance. The priority is **learners understanding the four modes and completing a decision card** (Sections F.2 and I). If the room is slow, shorten the opportunities discussion (F.5) and the case study (J) to a 5-minute mention. Protect the decision card â€" a learner who leaves without one has no foundation for Session 2.

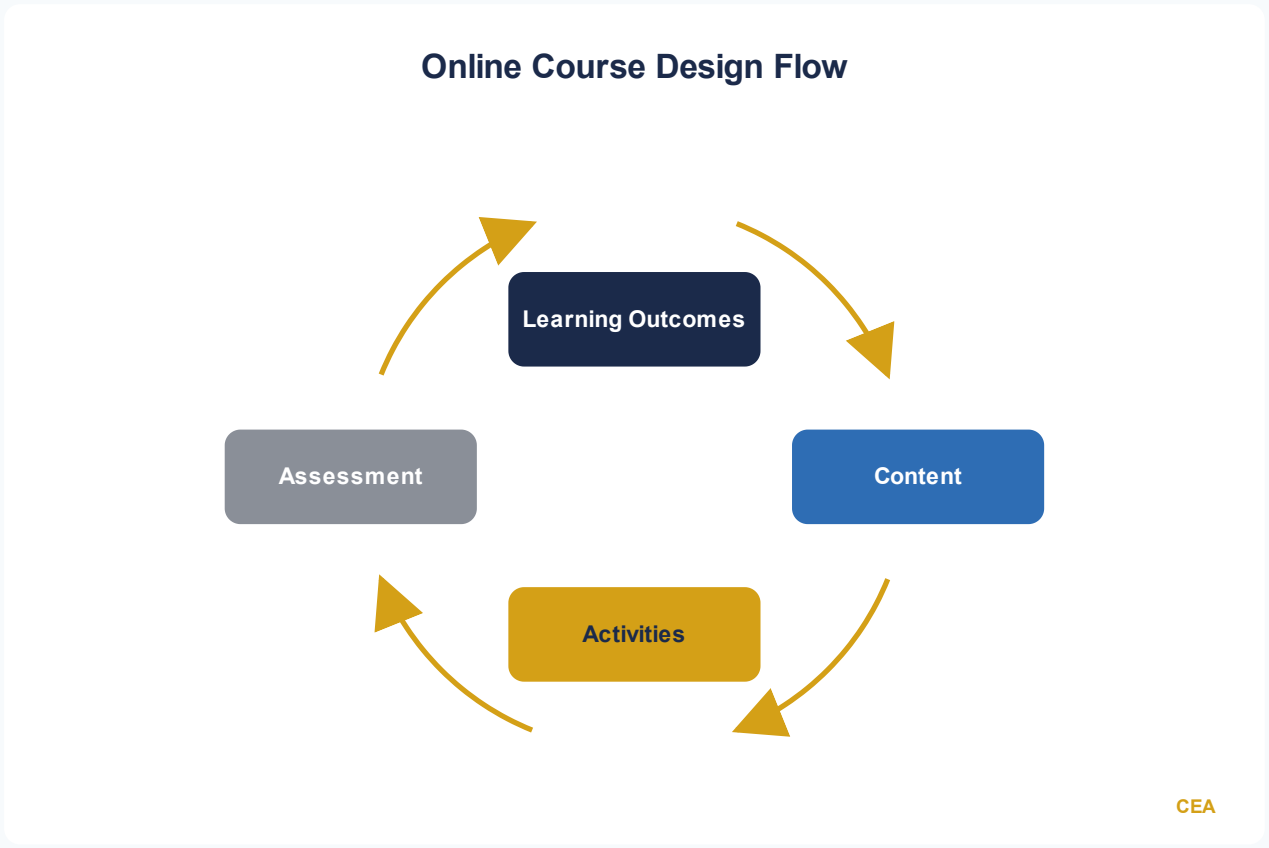

END OF SESSION 1

Next: Session 2 â€" Designing a Course and Planning a Lesson.

SESSION 02 OF 6

Designing a Course and Planning a Lesson

CONCEPT DIAGRAM — SESSION 02

CYBER ELIAS ACADEMY â€" ONLINE TEACHING

SESSION 2 â€" DESIGNING A COURSE AND PLANNING A LESSON

A. SESSION IDENTIFICATION

Item	Detail
Session number	2 of 6
Session title	Designing a Course and Planning a Lesson
Week / Module	Week 1 â€" Module 1: Design and Set Up
Recommended duration	105 minutes
Difficulty level	Beginner (writing, structure and planning â€" no software required for the core skills)
Prerequisite knowledge	Session 1 completed (or the ability to name the four online teaching modes). A course idea â€" real or fictional â€" that the learner genuinely knows how to teach. Basic writing ability. No

Item	Detail
	prior lesson-planning experience required.
Connection to previous work	In Session 1 you decided **how** your course will run â€" your mode and your free tools, on a decision card. Today you decide **what** you will teach and **how each lesson will run**: measurable outcomes, a curriculum map and a timed lesson plan.
Preparation before class	Print the verb bank cards (Section F.2), the curriculum map template (Section F.5) and the timed lesson plan template (Section F.6) â€" one per learner. Prepare a projector slide with the "spot the fake outcome" examples (Section D). Have Ngozi's five outcomes and curriculum map (Sections G and I) ready as the model. Read the Course Design Document Sections 5 (LO2, LO3) and 11 before class.

Instructor note on tone: This session is the "design backbone" of the course. It is thinking work, not software work, and some learners will find it abstract at first. Keep it concrete by anchoring everything to Ngozi's skirt course and to the learners' own course ideas. Celebrate the moment a learner turns "understand sewing" into a real outcome â€" that is the skill that separates a course from a folder of videos.

B. LEARNING OUTCOMES

By the end of this session, the learner will be able to:

1. **Explain** what a learning outcome is and is not, and why vague outcomes like "understand sewing" fail.
2. **Write at least five measurable learning outcomes** for their own course, each starting with an observable action verb (list, identify, demonstrate, build, produce) and containing no "understand," "know about" or "appreciate."
3. **Organise** their outcomes into modules and lessons and **produce a curriculum map** â€" a table proving that every outcome is taught by at least one lesson and every lesson has a purpose.
4. **Plan one complete timed lesson** with an opener, input, practice, a check for understanding and an exit task, with timings that suit online reality.
5. **Justify their timings** and explain **two techniques** for keeping an online session on schedule (a visible agenda, a parking lot for side questions, a technical buffer, or short blocks).

C. REQUIRED MATERIALS

Hardware

- One smartphone per learner (with a notes app) or an academy laptop with Google Docs. Either is enough.
- Instructor device connected to a projector or large screen.
- Pen and paper (or a notes app) for every learner.

Software

- A notes app (phone Notes, Google Docs or Microsoft Word). No special software needed â€" this session is about thinking and writing.
- Optional: Google Docs for typing the curriculum map and lesson plan.

Sample files

- **Verb bank cards** (Section F.2) â€" the action verbs, printed or projected.
- **"Spot the fake outcome" slide** (Section D) â€" five outcomes, some good, some bad.
- **Curriculum map template** (Section F.5) â€" a blank table: lessons down the side, outcomes across the top.
- **Timed lesson plan template** (Section F.6) â€" a blank table: time / activity / what the learner does / what the instructor does.
- **Ngozi's five outcomes, curriculum map and lesson plan** (Sections G and I) â€" the instructor's model.

Worksheets

- Worksheet 2.1 â€" "From Vague to Verbal" (a table: vague outcome â†' rewritten with an action verb).

- Worksheet 2.2 â€" "My Curriculum Map" (the blank map template).
- Worksheet 2.3 â€" "My Timed Lesson Plan" (the blank lesson plan template).

Accounts

- None required this session. (Google accounts were created in Session 1; learners can type in a notes app if preferred.)

Internet

- Not required. This session works fully offline with printed templates and the projector.

Alternative for learners who lack a facility

- Any phone with a notes app or a sheet of paper works. A learner who cannot type quickly may write by hand or dictate to a classmate; the skill is the *thinking*, not the typing.

Safety note: All course ideas and examples are the learner's own or fictional. No real learner data, no copyrighted material. Follow the academy's Ethics rules: collect less, protect more, ask permission, credit the owner, tell the truth.

D. OPENING ACTIVITY (6 minutes)

Instructor setup: Project five "outcomes" on the screen. Do not label them yet.

> 1. *"Understand sewing."*
> 2. *"Know about skirts."*
> 3. *"Cut and sew a basic A-line skirt using three measurements you took yourself."*
> 4. *"Appreciate the art of tailoring."*
> 5. *"Take three body measurements and record them accurately on a measurement chart."*

What the instructor says:

> *"Good morning. On the screen are five sentences. They all claim to be 'learning outcomes' â€" the things a learner will be able to do at the end of a course. But only some of them are real. Your job:* ***vote for the ones that are real outcomes.*** *Hold up one finger for outcome one, two for outcome twoâ€¦ which ones are real?"*

Let the class vote with their fingers. Then reveal:

> *"Outcomes 3 and 5 are real. Outcomes 1, 2 and 4 are fakes. The difference? A real outcome starts with an* ***action verb*** *â€" something you can see or do. 'Cut,' 'sew,' 'take,' 'record.' A fake outcome uses a* ***vague verb*** *â€" 'understand,' 'know about,' 'appreciate' â€" something that happens inside the learner's head and cannot be seen. If I cannot see it, I cannot test it. If I cannot test it, I do not know if my teaching worked."*

Expected learner response: Learners will vote, some hesitating on outcome 4 ("appreciate" sounds fancy). Accept all votes and use the reveal to draw out the rule: **action verb = real; vague verb = fake.**

Then reveal the hook: Say:

> *"This is the single most important skill in course design. A course built on 'understand' and 'know about' is a course that cannot be tested â€" and a course that cannot be tested is a course where neither the teacher nor the learner knows if anything was learned. Today you learn to write outcomes that are* ***so clear you could test them with a camera****. By the end of this session, you will have written five real outcomes for your own course, built a curriculum map, and planned one complete timed lesson."*

Why this opener works: It creates instant debate, it uses the familiar Ngozi example, and it teaches the core rule (action verbs) *before* any definition â€" learners discover it by voting, which makes it memorable.

E. PREREQUISITE REVIEW (7 minutes)

Run this as a fast oral round-robin. Put the questions on the projector.

Question 1: "What are the four modes of online teaching?"

- Expected answer: Live, recorded, cohort, one-to-one.
- Common gap: learners mix up cohort and recorded. Clarify: "Recorded is *when* they watch (anytime). Cohort is *how long* the group runs (a start and end date together)."

Question 2: "What did you put on your decision card in Session 1? What is your primary mode?"

- Expected answer: Each learner names their primary mode and one reason.
- Common gap: some learners completed the card in a rush and cannot recall it. Clarify: "If you cannot remember your mode, look at your card now â€" you will build on it today."

Question 3: "What is a free-tier limit? Give one example."

- Expected answer: Zoom free limits group calls to 40 minutes; YouTube unlisted is not public.
- Common gap: learners forgot. Clarify: "Limits are design constraints, not problems. We design around them."

Question 4: "What makes online teaching different from a classroom? Name two things."

- Expected answer: Shorter attention; distraction at home; mobile-first learners; screen fatigue; participation must be designed; data costs.
- Common gap: none serious; accept any two.

Bridge to today (say this):

> *"In Session 1 you decided how your course runs. Today you decide what it teaches and how each lesson runs. A course is not a pile of videos â€" it is a **structure**: outcomes, modules, lessons and activities, all mapped together. A lesson is not a talk â€" it is a **timed plan** with a beginning, a middle and an end. By the end of today, you will have the design backbone of your course."*

If more than a third of the class cannot name the four modes, spend 5 extra minutes re-sorting the four mode cards on the wall before continuing.

F. FULL LECTURE NOTES

F.1 What a learning outcome is â€" and is not

The idea. A **learning outcome** is a single sentence that says exactly what the learner will be able to **do** at the end of a lesson or course â€" something you can observe, test or see.

Plain-English definition. A learning outcome is a promise you can keep and check: "By the end of this lesson, you will be able to **do this specific thing**."

Why it exists. Without outcomes, a course is just a collection of videos and slides with no direction. With outcomes, every lesson has a purpose and every activity has a reason. Outcomes are the **rudder** of the course â€" they decide what you teach, what you practise and what you test.

The two kinds of outcome verb:

Vague verbs (do NOT use)	Action verbs (USE these)
Understand	List, name, identify
Know about	Describe, explain, compare
Be aware of	Demonstrate, show, teach
Appreciate	Build, make, create, produce

Vague verbs (do NOT use)	Action verbs (USE these)
Learn	Measure, cut, sew, write, calculate
Familiarise	Choose, decide, design

Why vague verbs fail. "Understand sewing" happens inside the learner's head. You cannot see it, film it or test it directly. "Cut and sew a basic A-line skirt" is something you can **watch** â€" you can see if the learner did it. A vague outcome cannot be assessed; an action outcome can.

Real-life comparison. Think of a **job description**. "The candidate will understand customer service" is vague â€" it tells nobody what the person will actually do. "The candidate will answer customer calls and resolve complaints within 24 hours" is an outcome â€" it says exactly what the person will do, and you can check if they did it. A learning outcome is a job description for the learner.

The rule to write on the board: If you cannot see it, film it or test it, it is not an outcome.

Worked example â€" turning vague into verbal:

Vague (fake) outcome	Real outcome (action verb)
"Understand sewing."	"Cut and sew a basic A-line skirt using three measurements you took yourself."
"Know about body measurements."	"Take three body measurements (bust, waist, hip) and record them accurately on a measurement chart."
"Appreciate fabric types."	"Identify three common fabrics (cotton, ankara, polyester) by sight and touch, and state one use for each."
"Learn about zips."	"Insert a basic zip into a skirt opening and sew it securely."

Common misconception. "More outcomes = a better course." No. A short course needs **five to seven** outcomes â€" enough to cover the skill, few enough to actually teach and test. Twenty outcomes in a six-lesson course is a course nobody can finish.

F.2 The verb bank â€" your toolkit for writing outcomes

The idea. You do not need to invent action verbs. Here is a bank of proven outcome verbs, grouped by the kind of skill they describe. Mix them to match your subject.

The CEA Verb Bank (beginner level):

Remembering	Understanding	Applying	Creating
List, name, identify, recall, recognise	Describe, explain, compare, summarise	Demonstrate, use, perform, carry out	Build, make, create, produce, design
Doing (skills)	**Calculating**	**Communicating**	**Deciding**
Measure, cut, sew, cook, type, install, repair	Calculate, compute, solve, convert	Write, present, record, explain	Choose, decide, select, recommend

How to use it: Pick the column that matches what the learner must *do*. If they must remember, use "list" or "name." If they must do a skill, use "demonstrate" or "measure." If they must make something, use "build" or "produce." Then add the **specific thing** they will do it with: "demonstrate **how to insert a zip**," "build **a basic A-line skirt**."

Nigerian examples across subjects:

- **Tailoring:** "Cut and sew a basic A-line skirt using three measurements you took yourself."
- **JAMB maths:** "Solve five quadratic equations correctly using the factorisation method."
- **Cooking:** "Prepare a pot of jollof rice using a recipe with six ingredients."
- **Phone repair:** "Replace a cracked phone screen and test that the touch works."
- **Excel:** "Create a budget spreadsheet that totals monthly expenses automatically."
- **Church teaching:** "Retell the story of David and Goliath in your own words and list three lessons from it."

Say this to the class:

> *"The verb bank is your friend. When you are stuck on an outcome, do not stare at a blank page â€" open the bank, pick the column that matches your skill, and start with one of those verbs. Then add the specific thing. 'Demonstrateâ€¦' â€" demonstrate what? 'Demonstrate how to take three body measurements.' Done."*

F.3 Course structure â€" course, modules, lessons, activities

The idea. A course is not a flat pile of lessons. It has a **structure** â€" four levels, each one smaller and more specific than the last.

The four levels:

Level	What it is	Example (Ngozi's skirt course)
Course	The whole learning journey â€" the big promise.	"Sewing Basics: Cut and Sew Your First A-Line Skirt."
Module	A chapter of the course â€" a group of related lessons.	Module 1: "Getting Started" (measurements, tools, fabric).
Lesson	One session â€" one focused piece of learning with its own outcome.	Lesson 1.2: "Taking Your Body Measurements."
Activity	One thing the learner *does* inside a lesson â€" a task, a practise, a check.	"Measure your bust, waist and hip, and write them on the measurement chart."

Why structure matters. Structure is what makes a course feel organised instead of overwhelming. A learner who sees "Module 1, Lesson 1.2" knows where they are, what comes next, and how far they have come. Structure also helps *you* â€" the instructor â€" because it stops you from teaching randomly.

Real-life comparison. Think of a **building**. The course is the whole building. A module is a floor. A lesson is a room. An activity is the furniture in the room. You would not build a building by piling furniture in a field â€" you build floor by floor, room by room. A course is the same.

How many lessons? For a short online course like Ngozi's, aim for **five to seven lessons**, each with one clear outcome. More than ten lessons in a short course is usually a sign that the course is trying to do too much.

Common misconception. "A lesson and a video are the same thing." No. A lesson is a **learning experience** â€" it may contain a video, but it also contains an activity, a practice and a check. A video is just one piece of content inside a lesson. (You will build the video in Session 3.)

F.4 The curriculum map â€" proving every outcome is taught

The idea. A **curriculum map** is a table that proves two things: (1) every outcome is taught by at least one lesson, and (2) every lesson teaches at least one outcome. It is the quality guarantee of your course.

Plain-English definition. A curriculum map is a grid: lessons down the side, outcomes across the top. You put a mark (a tick, a lesson number) where a lesson teaches an outcome. If an outcome has no tick, it is not taught â€" you must add a lesson. If a lesson has no tick, it has no purpose â€" you must remove it or give it an outcome.

Worked example â€" Ngozi's five-lesson skirt course:

	Outcome 1: Take 3 measurements	Outcome 2: Identify fabrics	Outcome 3: Cut pattern	Outcome 4: Sew skirt	Outcome 5: Insert zip
Lesson 1: Measurements	âœ"				
Lesson 2: Fabric & tools		âœ"			
Lesson 3: Cutting the pattern			âœ"		
Lesson 4: Sewing the skirt				âœ"	
Lesson 5: The zip & finishing					âœ"

How to read it: Every outcome has at least one tick (it is taught). Every lesson has at least one tick (it has a purpose). The map is **complete and consistent** â€" no orphans, no freeloaders.

Why this matters. Without a map, learners build courses with gaps ("I never taught the zip, but I tested it on the zip") and waste ("I made a whole lesson on something I never test"). The map catches both before they become problems. It is also the document that proves your course is well-designed â€" you will submit it in the capstone.

Common misconception. "A curriculum map is extra paperwork." It is not â€" it is the **proof** that your course works. A builder does not skip the blueprint to save time; they draw it so the house does not fall down.

F.5 Planning a timed lesson â€" the five parts

The idea. A lesson is not a talk â€" it is a **timed plan** with five parts, each with a job. Here is the structure, with the job of each part and a timing guide for a 30-minute online lesson.

Part	What it is	What the learner does	Time (30-min lesson)
1. Opener	A hook that grabs attention and states the outcome.	Watches, listens, reads the outcome.	3 min
2. Input	The teaching â€" the new knowledge or skill, demonstrated.	Watches a demo, reads, listens.	8 min
3. Practice	The learner tries it â€" with support.	Does a task, answers questions, tries the skill.	10 min
4. Check for understanding	You find out if they got it â€" a quick quiz, a show of hands, a "show me."	Answers, demonstrates, explains.	5 min
5. Exit task	A final task that proves they can do it alone â€" and points to the next lesson.	Completes a task, submits something, previews next time.	4 min

Why five parts? The opener earns attention. The input delivers the new learning. The practice makes them do it. The check tells you if it worked. The exit task proves they can do it alone and closes the loop. Remove any one and the lesson leaks: no opener, they are not paying attention; no practice, they watch but never do; no check, you do not know if they learned; no exit task, the lesson just stops.

Real-life comparison. Think of a **good sermon or talk**. It opens with a story that grabs you (opener), teaches the message (input), asks you to discuss or pray (practice), asks "do you understand?" (check), and sends you out with one thing to do this week (exit task). A lesson is the same shape â€" a beginning, a middle and an end, with the learner *doing* something in the middle.

Worked example â€" Ngozi's Lesson 1.2 "Taking Your Body Measurements" (30 minutes):

Time	Part	What happens
0â€"3 min	Opener	"By the end of this lesson, you will be able to take three body measurements and record them accurately. Watch this 30-second clip of me measuring a learner â€" then you will do it yourself."
3â€"11 min	Input	Ngozi demonstrates on camera: bust, waist, hip â€" how to stand, where to place the tape, how to read it. Three short clips, one per measurement.
11â€"21 min	Practice	Learners measure themselves at home and write the three numbers on the measurement chart (a Google Doc). Ngozi stays in the chat to answer questions.
21â€"26 min	Check	Quick poll: "Type your waist measurement in the chat." Ngozi reads them and confirms they are in the right range.
26â€"30 min	Exit task	"Photograph your completed measurement chart and submit it in Google Classroom. Next lesson: choosing your fabric â€" bring your measurements with you."

Common misconception. "The input is the lesson." No â€" the input is only the teaching. The *learning* happens in the practice and the check. A lesson that is 25 minutes of input and 5 minutes of practice is a lecture, not a lesson.

F.6 Online time management â€” keeping the session on schedule

The idea. Online time slips away faster than classroom time. A side question, a technical problem, a slow connection â€” and you have lost 10 minutes. You need techniques to protect the schedule.

Why it is harder online: In a classroom, you can see the clock, read the room and steer back. Online, side questions arrive in the chat and derail you; technical problems eat time; learners arrive late and you repeat yourself. Without a plan, a 30-minute lesson becomes 45 minutes of talking.

The four techniques:

1. **Short blocks online.** Attention online is shorter than in a room. Plan **5â€“10 minute blocks**, not 30-minute stretches. Change the activity every block: watch, then do, then answer, then discuss. (You learned this in Session 1 â€” now you apply it to the lesson plan.)
2. **A visible agenda.** Put the agenda on the screen at the start: "Today: 3 min opener, 8 min demo, 10 min practice, 5 min check, 4 min exit task." When a side question comes, you can point to the agenda: "Great question â€” that is for the practice block, write it in the parking lot and we will come back." The agenda is your shield against derailment.
3. **A parking lot.** A "parking lot" is a visible list (on a slide or in the chat) where you park side questions that are good but off-topic. "That is a great question about fabric cost â€” I have parked it. We will answer it in the live Q&A." This honours the question without losing the lesson.
4. **A technical buffer.** Plan your lesson for **25 minutes inside a 30-minute slot**. The extra 5 minutes is your buffer for latecomers, a frozen screen, a learner who cannot find the link. If everything runs perfectly, you end early â€” a happy problem. If something breaks, the buffer saves you.

Worked example â€” how the buffer saves a lesson:

> *A learner joins 4 minutes late because the link did not work. Without a buffer, you either repeat the opener (boring for the others) or skip it (confusing for the latecomer). With a 5-minute buffer, you let them in, they watch the 30-second opener recording you prepared, and you start the input on time. The buffer absorbed the problem.*

Say this to the class:

> *"Online, time is like data â€” it runs out faster than you think. The agenda, the parking lot and the buffer are not bureaucracy. They are the difference between a lesson that ends on time and one that ends in chaos. Plan for 25, deliver in 30."*

F.7 Summary of the lecture

- A **learning outcome** is a sentence saying what the learner will be able to **do** â€” observable, testable.
- Use **action verbs** (list, demonstrate, build, produce) â€” never "understand," "know about" or "appreciate."
- A course has a **structure**: course â†’ modules â†’ lessons â†’ activities.
- A **curriculum map** proves every outcome is taught and every lesson has a purpose.
- A lesson has **five parts**: opener, input, practice, check for understanding, exit task.
- Online time management: **short blocks, a visible agenda, a parking lot, a technical buffer**.
- Plan for 25 minutes, deliver in 30.

    A[Learning outcomes] --> B[Content] --> C[Activities] --> D[Assessment] --> E[Course complete]
```

G. INSTRUCTOR DEMONSTRATION (15 minutes)

Goal: Walk the class through writing five outcomes, building a curriculum map and planning one timed lesson for Ngozi's skirt course â€" thinking aloud so learners see the *reasoning*, not just the result.

Setup: Project the blank curriculum map template and the blank lesson plan template. Have the verb bank visible.

G.1 Step 1 â€" Write five outcomes (4 minutes)

Say: "Ngozi's course promise is: 'Cut and sew your first A-line skirt.' But that is too big for one lesson. I need to break it into five outcomes â€" the five things a learner must be able to do to keep that promise."

Write them on the board, narrating each choice:

> 1. *"Take three body measurements (bust, waist, hip) and record them accurately on a measurement chart."*
> 2. *"Identify three common fabrics (cotton, ankara, polyester) by sight and touch, and state one use for each."*
> 3. *"Cut a basic A-line skirt pattern from the learner's own measurements."*
> 4. *"Sew the skirt panels together and finish the seams."*
> 5. *"Insert a basic zip into the skirt opening and sew it securely."*

Say: "Check every one: does it start with an action verb? Take, identify, cut, sew, insert. Yes. Could I film the learner doing it? Yes. Could I test it? Yes. These are real outcomes."

G.2 Step 2 â€" Build the curriculum map (4 minutes)

Say: "Now I prove every outcome is taught. I make a grid â€" lessons down the side, outcomes across the top."

Draw the map (as in Section F.4) and place the ticks one by one:

> *"Lesson 1 teaches outcome 1 â€" measurements. Lesson 2 teaches outcome 2 â€" fabric. Lesson 3 teaches outcome 3 â€" cutting. Lesson 4 teaches outcome 4 â€" sewing. Lesson 5 teaches outcome 5 â€" the zip."*

Say: "Now I check for orphans. Does every outcome have a tick? Yes. Does every lesson have a tick? Yes. The map is complete. If I had a lesson with no tick â€" say, a lesson on 'the history of fashion' â€" I would either remove it or give it an outcome. No freeloaders."

G.3 Step 3 â€" Plan one timed lesson (5 minutes)

Say: "Now I plan Lesson 1 in detail â€" the measurements lesson. Thirty minutes online. Five parts."

Fill the lesson plan template on the board (as in Section F.5), narrating the timings:

> *"Opener 3 minutes â€" I will not start teaching cold. I show a 30-second clip of me measuring a learner and state the outcome. Input 8 minutes â€" three short demos, one per measurement. Practice 10 minutes â€" they measure themselves, I stay in the chat. Check 5 minutes â€" a poll: 'type your waist measurement.' Exit task 4 minutes â€" photograph the chart, submit it, preview next lesson. Total: 30 minutes. I planned for 25, so I have a 5-minute buffer."*

Say: "Notice the rhythm: they do something in every block. Watch, then do, then answer, then submit. That is the design. A lesson where they only watch for 30 minutes is not a lesson â€" it is a film."

G.4 The finished artefacts (project them)

Say: "Here is what you should have after today: five outcomes, one curriculum map, one timed lesson plan. These are not homework â€" they are the **design backbone** of your course, and they become part of your capstone in Session 6."

Questions to ask during the demo:

- "Why five outcomes and not fifteen?" (Fifteen is too many to teach and test in a short course. Five is focused.)
- "Why is the practice block the longest?" (Because that is where the learning happens â€" they do it, not just watch.)
- "What is the parking lot for?" (Side questions that are good but off-topic â€" park them, do not lose them.)
- "Why plan for 25 minutes in a 30-minute slot?" (The 5-minute buffer absorbs latecomers and technical problems.)

Expected result: Learners see that outcomes, a map and a lesson plan are not paperwork â€" they are the **argument** that a course works. They now have a complete model to copy.

H. GUIDED PRACTICAL EXERCISE (18 minutes)

Objective: With the instructor guiding, each learner writes five measurable outcomes for their own course and starts a curriculum map.

Starting materials: The verb bank (projected), Worksheet 2.1 (From Vague to Verbal), Worksheet 2.2 (curriculum map template), a pen or notes app.

Procedure (instructor calls out each step; learners follow; instructor walks the room):

1. Write your **course promise** in one sentence: "By the end of this course, my learner will be able to _____."
2. Look at the verb bank. Pick the **column** that matches your skill (remembering, doing, creatingâ€¦).
3. Write **five outcomes** for your course. Each must start with an action verb from the bank and name the specific thing the learner will do.
4. **Pause and predict:** For each outcome, ask: "Could I film a learner doing this?" If no, rewrite it with a clearer verb.
5. Now open your curriculum map. Write your five lessons down the side and your five outcomes across the top.
6. Place a tick where each lesson teaches an outcome.
7. **Check for orphans:** Does every outcome have a tick? Does every lesson have a tick? If not, fix it.
8. Share your five outcomes with the person beside you. Ask them: "Which is your favourite, and why?"

Expected result: Five outcomes and a draft curriculum map for their own course.

Points to pause on and predict:

- After step 3: "Who used a vague verb by accident? Which word?" (Common: "understand," "learn about." Catch them now.)
- After step 7: "Who found an orphan â€" an outcome with no tick?" (This is the map doing its job.)

Troubleshooting while walking the room:

- Learner writes "understand" â†' Point to the verb bank: "Pick a verb from the 'doing' or 'applying' column instead."
- Learner writes too many outcomes â†' "Choose your five most important. What must they be able to *do* to keep your course promise?"
- Learner's map has a lesson with no tick â†' "What outcome does this lesson teach? If none, should this lesson be here?"
- Learner is stuck on the course promise â†' "What is the one thing a learner cannot do now, but will be able to do after your course? That is your promise."

Completion checklist (learner ticks each):

- ☐ Course promise written in one sentence
- ☐ Five outcomes, each starting with an action verb
- ☐ Each outcome could be filmed or tested
- ☐ Curriculum map with lessons and outcomes
- ☐ Every outcome has a tick; every lesson has a tick
- ☐ Shared outcomes with a partner

I. INDEPENDENT CLASS EXERCISE (15 minutes)

Task (new task, done alone): Complete your **curriculum map** and **plan one timed lesson** for your own course, using the templates.

Scenario. You are the instructor of your own course (the idea you brought to Session 1). You have your five outcomes from the guided exercise. Now you must prove the course is structured and plan one lesson in full.

Requirements:

1. Complete your **curriculum map**: five lessons, five outcomes, ticks placed, no orphans.

2. Choose **one lesson** and plan it with the five parts (opener, input, practice, check, exit task), with timings that add up to **30 minutes**.
3. For each part, write **what the learner does** â€" not just what you do.
4. Mark your **technical buffer** â€" show that you planned for 25 minutes of content inside 30.

Time allowance: 15 minutes.

Success criteria:

- Curriculum map is complete: every outcome taught, every lesson has a purpose.
- Lesson plan has all five parts with timings that add to 30 minutes.
- Every part includes what the *learner* does.
- The buffer is visible (25 minutes of content in a 30-minute slot).

Hints if stuck:

- Hint 1: Start with the practice block â€" what will the learner *do*? Then build the input that prepares them for it.
- Hint 2: If your timings do not add to 30, adjust the practice block â€" it is the most flexible.
- Hint 3: Look at Ngozi's lesson plan (Section F.5) as a model â€" copy the shape, change the content.

INSTRUCTOR ANSWER KEY (model solution â€" do not show learners):

NGOZI'S CURRICULUM MAP *(complete â€" as in Section F.4): Every outcome taught by one lesson; every lesson teaches one outcome. No orphans.*

NGOZI'S TIMED LESSON PLAN â€" Lesson 1.2 "Taking Your Body Measurements" (30 minutes):

Time	*Part*	*What the learner does*	*What Ngozi does*
0â€"3	*Opener*	*Watches a 30-second clip of a measurement being taken; reads the outcome*	*States the outcome; shows the clip*
3â€"11	*Input*	*Watches three short demos (bust, waist, hip) and copies each on their own body*	*Demonstrates each measurement on camera*
11â€"21	*Practice*	*Measures themselves and records the three numbers on the measurement chart*	*Stays in the chat, answers questions, demos again if asked*
21â€"26	*Check*	*Types their waist measurement in the chat*	*Reads them, confirms they are in the right range, corrects common mistakes*
26â€"30	*Exit task*	*Photographs the chart and submits it; reads the preview of Lesson 2*	*Confirms submission; previews next lesson*

Buffer: *Content planned for 25 minutes (3+8+10+5+4 = 30, but the input demos are 8 minutes of a 10-minute block â€" 2 minutes of flexibility); the exit task can shrink to 2 minutes if the practice runs long.*

(A strong learner solution ticks every box: five parts, learner actions, 30 minutes, a visible buffer.)

Learner marking (out of 10):

- Curriculum map complete (no orphans) (3)
- Five parts present with timings adding to 30 (3)
- Every part states what the learner does (2)
- Technical buffer visible (2)

J. REAL-WORLD CASE STUDY

Situation. *Pastor Bello* runs a Sunday school class of 25 teenagers in a church in Port Harcourt. When the church decided to "move classes online," he simply started teaching the same way on Zoom â€" 45 minutes of talking, a Bible verse on the screen, and a "any questions?" at the end that nobody answered. After three weeks, only 8 of the 25 teenagers were still attending. He concluded: "Online teaching does not work for teenagers."

Relevant facts.

- Pastor Bello is a good teacher in person â€" his teenagers love his class.
- His "outcomes" were vague: "The learners will know the Bible" and "understand the story of David."
- His lessons were 45 minutes of input with no practice, no check and no exit task.
- The teenagers were on phones, on mobile data, at home with distractions.
- He had never heard of a curriculum map, a check for understanding or a parking lot.

Decision point. Pastor Bello wants his Sunday school class back. What should he change?

Possible approaches.

1. **Give up and return to in-person only** â€" accept that online does not work.
2. **Keep teaching exactly as before, but longer** â€" maybe 60 minutes will hold their attention.
3. **Redesign the class** â€" write real outcomes, structure the lessons, and design participation.

Recommended solution. Approach 3. Here is the reasoning:

- **Why not 1?** The problem is not online teaching â€" it is the *design*. Abandoning online gives up the reach and flexibility the church wanted.
- **Why not 2?** Longer input is the opposite of what online needs. A 60-minute talk will lose the remaining 8 teenagers too.
- **Why 3?** The class needs the design backbone from this session: real outcomes, a structured lesson and designed participation.

The redesign (what Pastor Bello changed):

- **Vague outcome:** "The learners will know the Bible." â†' **Real outcome:** "Retell the story of David and Goliath in your own words and list three lessons from it."
- **Structure:** A six-week cohort â€" the group starts and finishes together, with a live class every Sunday and a short recorded story during the week.
- **Lesson plan (30 minutes):** 3-min opener (a dramatic question: "Have you ever faced a giant?"), 8-min input (the story, told well), 10-min practice (in breakout pairs, each pair retells one part of the story), 5-min check (each pair shares one sentence in the main room), 4-min exit task (write one lesson from the story in the chat).
- **Engagement:** A poll in the first minute, a chat question in the input, a breakout task in the practice, a share in the check. Something every 8 minutes.
- **Time management:** A visible agenda on screen, a parking lot for side questions, a 5-minute buffer.

The result (after four weeks): Attendance rose back to 22 of 25. The teenagers started arriving early to talk in the chat. One parent messaged: "My daughter now retells us Bible stories at dinner." Pastor Bello had not changed his teaching â€" he had changed its **design**.

Trade-offs.

- The redesign took Pastor Bello one evening of work â€" writing outcomes, building the map, planning the lesson. That is the investment this session asks of every learner.
- The first redesigned lesson was imperfect. That is normal. The second was better. By the fourth, it was good.
- The skills are transferable: the same design works for a JAMB class, a tailoring course, a phone-repair workshop.

Professional connection. This is the pattern behind every well-run online class in Nigeria and beyond: **a real outcome, a structured lesson, designed participation and honest time management.** Master this and you can teach almost anything online. Forget it and you will conclude â€" wrongly â€" that "online teaching does not work."

K. COMMON MISTAKES AND TROUBLESHOOTING

Use this table as the live guide. Point learners to the row rather than giving the answer.

K.1 Using vague verbs ("understand," "know about," "appreciate")

Symptoms: Outcomes cannot be tested; the learner does not know if they achieved them. **Likely cause:** The learner wrote what they want the learner to *think*, not what they will *do*. **How to investigate:** Read the outcome and ask: "Could I film a learner doing this?" If no, it is vague. **Corrective steps:** Replace the verb with an action verb from the bank; add the specific thing. **How**

to confirm resolved: The outcome starts with an action verb and names something observable. **Prevention:** Always run outcomes through the verb bank before accepting them.

K.2 Writing too many outcomes

Symptoms: A 12-outcome course that cannot be taught in six lessons. **Likely cause:** The learner tried to include everything they know. **How to investigate:** Ask: "How many lessons do you have? Can you teach and test 12 outcomes in that time?" **Corrective steps:** Cut to the five to seven outcomes that matter most. Save the rest for a future course. **How to confirm resolved:** The number of outcomes matches the number of lessons (roughly one per lesson). **Prevention:** Rule of thumb â€" one outcome per lesson.

K.3 Lessons with no outcome (orphans on the map)

Symptoms: A lesson that teaches something nobody tests â€" a "fun" lesson with no purpose. **Likely cause:** The learner added content because it seemed interesting, not because it served an outcome. **How to investigate:** Look at the map â€" is there a lesson row with no tick? **Corrective steps:** Either give the lesson an outcome (and test it) or remove the lesson. **How to confirm resolved:** Every lesson has a tick. **Prevention:** Build the map *after* the outcomes, not before.

K.4 Outcomes with no lesson (gaps on the map)

Symptoms: An outcome that is tested but never taught â€" the learner is set up to fail. **Likely cause:** The learner wrote outcomes from the course promise but planned lessons from habit. **How to investigate:** Look at the map â€" is there an outcome column with no tick? **Corrective steps:** Add a lesson that teaches that outcome, or remove the outcome. **How to confirm resolved:** Every outcome has a tick. **Prevention:** The map exists to catch this â€" always complete it.

K.5 A lesson that is all input, no practice

Symptoms: A 30-minute lesson where the learner watches for 25 minutes and does nothing. **Likely cause:** The learner planned what they will *teach*, not what the learner will *do*. **How to investigate:** Look at the lesson plan â€" how many minutes have the learner doing something? **Corrective steps:** Add a practice block (10 minutes) and a check (5 minutes); shorten the input. **How to confirm resolved:** The learner does something in every block. **Prevention:** Plan the practice first, then the input that prepares for it.

K.6 Timings copied from face-to-face

Symptoms: A 45-minute input block "because that is how long it takes in the classroom." **Likely cause:** The learner did not adjust for online attention spans. **How to investigate:** Ask: "What will the learners be doing in minute 30?" If the answer is "listening," it is too long. **Corrective steps:** Break the input into 5â€"10 minute chunks with a change of activity between them. **How to confirm resolved:** No single block exceeds 10â€"12 minutes without the learner doing something. **Prevention:** Remember: online attention is shorter. Plan for 25, deliver in 30.

K.7 No exit task

Symptoms: The lesson justâ€¦ stops. No check, no task, no pointer to next time. **Likely cause:** The learner ran out of planning time. **How to investigate:** Ask: "How does the learner know they succeeded? How do they know what is next?" **Corrective steps:** Add a 4-minute exit task â€" a submission, a chat answer, a preview. **How to confirm resolved:** The lesson ends with a task and a preview. **Prevention:** The exit task is the proof of learning â€" never skip it.

Distinguish likely vs confirmed: A "likely cause" becomes "confirmed" only after you check it â€" for example, the learner can actually point to the vague verb in their outcome, or actually show a lesson row with no tick. Teach learners to confirm before concluding.

L. SESSION ASSIGNMENT

Assignment title: "Five Outcomes, a Curriculum Map and a Timed Lesson Plan"

Purpose: To practise the design backbone of a course â€" measurable outcomes, a proven structure and a lesson that works online â€" and to build the capstone's outcomes and five-lesson structure.

Realistic scenario. You are the instructor of your own course. You have your decision card from Session 1 (your mode and tools). Now you must design the course itself: what learners will be able to do, how the lessons are structured, and how one

lesson runs in detail. This is the core of your capstone outline in Session 6.

Detailed instructions:

1. Write **five measurable outcomes** for your course. Each must start with an action verb (no "understand" or "know about") and name something specific the learner will do.
2. Build a **curriculum map**: five lessons down the side, five outcomes across the top, ticks placed, no orphans (every outcome taught, every lesson has a purpose).
3. Plan **one lesson** in full: the five parts (opener, input, practice, check, exit task) with timings that add to 30 minutes, what the learner does in each part, and a visible technical buffer.
4. Write **one paragraph** (5â€"7 sentences) justifying your timings: "Why did you give the practice block the most time? What would go wrong if you removed the check for understanding?"

Required deliverables:

- Five measurable outcomes.
- A completed curriculum map.
- One timed lesson plan (five parts, 30 minutes, learner actions, buffer).
- One paragraph justifying the timings.

Submission format: Save as `A2_YourName.docx` (or `.pdf` or handwritten and photographed clearly) and upload to `/Online-Teaching/Week1/A2/`. You may also paste the text into your workbook.

Deadline: Before Session 3.

Marking rubric (10 marks):

Criterion	Marks	Description of a strong answer
Five real outcomes	3	Action verbs, specific, testable â€" no vague verbs
Curriculum map complete	2	Every outcome taught, every lesson has a purpose, no orphans
Five parts with timings	2	Opener, input, practice, check, exit task â€" adding to 30 min
Learner actions stated	2	Every part says what the learner does
Timings justified	1	A clear paragraph explaining the choices

Common mistakes to avoid: vague verbs; too many outcomes; lessons with no outcome; outcomes with no lesson; all-input lessons; timings copied from the classroom; no exit task.

INSTRUCTOR REFERENCE SOLUTION (do not show learners):

> ***Five outcomes â€" Ngozi's skirt course:***
>
> 1. *Take three body measurements (bust, waist, hip) and record them accurately on a measurement chart.*
> 2. *Identify three common fabrics (cotton, ankara, polyester) by sight and touch, and state one use for each.*
> 3. *Cut a basic A-line skirt pattern from the learner's own measurements.*
> 4. *Sew the skirt panels together and finish the seams.*
> 5. *Insert a basic zip into the skirt opening and sew it securely.*
>
> ***Curriculum map:*** *Five lessons (Measurements, Fabric & tools, Cutting, Sewing, Zip & finishing), each teaching one outcome â€" as in Section F.4. No orphans.*
>
> ***Timed lesson plan:*** *Lesson 1 "Measurements," 30 minutes â€" as in Section F.5 and the Section I answer key. Opener 3, input 8, practice 10, check 5, exit task 4. Learner actions in every part. Buffer: content planned for 25 minutes.*
>
> ***Justification paragraph (model):*** *"I gave the practice block the most time (10 minutes) because measuring your own body is a physical skill â€" you cannot learn it by watching, you must do it. If I removed the check for understanding, I would not know if learners are measuring correctly, and a wrong waist measurement ruins the whole skirt. The exit task proves they can do it alone and gives me evidence for the next lesson. I planned for 25 minutes of content in a 30-minute slot so that latecomers and technical problems do not break the lesson."*

M. KNOWLEDGE CHECK

(Learner version â€" answers only in the Instructor Key below.)

Q1. Short answer. What is a learning outcome, in your own words?

Q2. Multiple choice. Which of these is a real, measurable learning outcome? a) "Understand sewing." b) "Know about skirts." c) "Cut and sew a basic A-line skirt using three measurements you took yourself." d) "Appreciate the art of tailoring."

Q3. Explain. Why is "understand sewing" not a usable outcome? Give two reasons.

Q4. Practical. Rewrite this vague outcome with an action verb: "The learner will know about body measurements."

Q5. Matching. Match each structural level to its example: **course, module, lesson, activity.** a) "Measure your bust, waist and hip and record them on a chart." b) "Sewing Basics: Cut and Sew Your First A-Line Skirt." c) "Lesson 1.2: Taking Your Body Measurements." d) "Module 1: Getting Started."

Q6. Scenario. A learner's curriculum map has a lesson on "the history of fashion" but no outcome tests it. What is the problem, and what are two ways to fix it?

INSTRUCTOR ANSWER KEY (Q1â€"Q6)

A1. A learning outcome is a single sentence that says exactly what the learner will be able to *do* at the end of a lesson or course â€" something observable and testable. (Accept any answer covering "what the learner will be able to do" and "observable/testable.")

A2. (c) "Cut and sew a basic A-line skirt using three measurements you took yourself." (It starts with action verbs â€" cut, sew, took â€" and names something specific and observable.)

A3. Two reasons: (1) "Understand" is a vague verb â€" it happens inside the learner's head and cannot be seen, filmed or tested directly. (2) It does not say *what* the learner will be able to do â€" there is nothing specific to practise or assess. (Accept any two correct reasons.)

A4. Any action-verb version, e.g.: "Take three body measurements (bust, waist, hip) and record them accurately on a measurement chart." or "Demonstrate how to measure the bust, waist and hip using a tape measure."

A5. course = (b); module = (d); lesson = (c); activity = (a).

A6. The problem: the lesson is an "orphan" â€" it has no outcome, so it has no purpose in the course. Two fixes: (1) Remove the lesson, since nothing tests it. (2) Give it a real outcome (e.g., "Identify three common fabrics and state one use for each") and test that outcome â€" then the lesson earns its place. (Accept either fix, or both.)

N. REFLECTION AND RECAP

Plain-English summary. Today you learned the design backbone of a course. You learned that a **learning outcome** is a sentence saying what the learner will be able to *do* â€" and that vague verbs like "understand" and "know about" are not outcomes because they cannot be seen or tested. You learned the **verb bank** â€" action verbs like list, demonstrate, build, produce â€" and how to use them. You learned the four-level **structure** of a course: course â†' modules â†' lessons â†' activities. You learned the **curriculum map** â€" the table that proves every outcome is taught and every lesson has a purpose. You learned the **five parts of a lesson**: opener, input, practice, check for understanding, exit task â€" with timings that add to 30 minutes. And you learned the four **online time-management** techniques: short blocks, a visible agenda, a parking lot and a technical buffer.

Five important takeaways:

1. **Outcomes are promises you can test** â€" action verbs, specific, observable.
2. **Structure is course â†' modules â†' lessons â†' activities** â€" each level smaller and more specific.
3. **The curriculum map proves the course works** â€" no orphan outcomes, no purposeless lessons.
4. **A lesson has five parts** â€" opener, input, practice, check, exit task â€" and the learner must *do* something in every part.
5. **Online time needs design** â€" short blocks, a visible agenda, a parking lot and a buffer.

Questions to help you recognise what you can now do:

- Can I explain why "understand sewing" is not a real outcome?

- Can I write five outcomes using action verbs from the bank?
- Can I build a curriculum map and check it for orphans?
- Can I plan a lesson with five parts and timings that add to 30 minutes?
- Can I name two techniques for keeping an online session on schedule?
- Can I justify why the practice block is the longest?

Connection to the next session. You now have the design backbone: outcomes, a map and a lesson plan. But a course is not a plan â€" it is **material**: slides a learner can read on a phone, a short video with clear audio, a worksheet that makes them do something. Next session â€" **Creating Learning Content** â€" you will build that material in free tools: a 3-slide deck, a 60â€"90 second recorded introduction, a worksheet in Google Docs, and a copyright checklist that keeps you honest. Bring your lesson plan â€" you will build the content for your Lesson 1.

O. INSTRUCTOR EVALUATION NOTES

Observable signs of genuine competence:

- Learner writes outcomes with action verbs without being prompted to check the verb bank.
- Learner's curriculum map has no orphans â€" they check it themselves.
- Learner's lesson plan has all five parts and the learner does something in every block.
- Learner's timings add to 30 minutes and include a visible buffer.
- Learner can justify *why* the practice block is the longest, not just *that* it is.
- Learner catches vague verbs in a partner's work during the guided exercise.

Common misconceptions to watch for and correct:

- "Understand is fine as a verb â€" it means learning." â†' It is vague; you cannot test it. Use an action verb.
- "More outcomes = a more serious course." â†' Five to seven is right; more is a course nobody finishes.
- "A lesson is a video." â†' A video is one piece of content; a lesson is a five-part learning experience.
- "The curriculum map is bureaucracy." â†' It is the proof the course works â€" it catches gaps before they become failures.
- "I will talk for 45 minutes because that is how I teach." â†' Online attention is shorter; plan for 25, deliver in 30.
- "The exit task is optional." â†' It is the proof of learning; never skip it.

Suggested remedial exercises for learners who struggle:

1. **Verb swap drill:** give five vague outcomes ("understand cooking," "know about phones"); the learner rewrites each with an action verb and a specific thing.
2. **Map check drill:** give a small curriculum map with one orphan lesson and one orphan outcome; the learner finds both and fixes them.
3. **Lesson plan fill-in:** give a lesson plan with the practice and exit task blocks missing; the learner writes them.

Differentiation:

- **Level 1 (supported):** provide outcomes already written for the learner's course; the learner checks them against the verb bank and completes the map.
- **Level 2 (standard):** the session as written â€" five outcomes, a map and a timed lesson plan.
- **Level 3 (challenge):** ask the learner to plan a **second** version of their lesson for a different mode (e.g., if their course is recorded, plan the same lesson as a live class) and explain in a short paragraph what changed and why.

Capstone links. The outcomes, curriculum map and lesson plan completed today become the **outcomes and five-lesson structure** of the capstone mini-course outline in Session 6. A learner who completes them well already owns the core of the final submission. Remind learners to keep every artefact in their working folder (`CEA-OT-FirstnameLastname`).

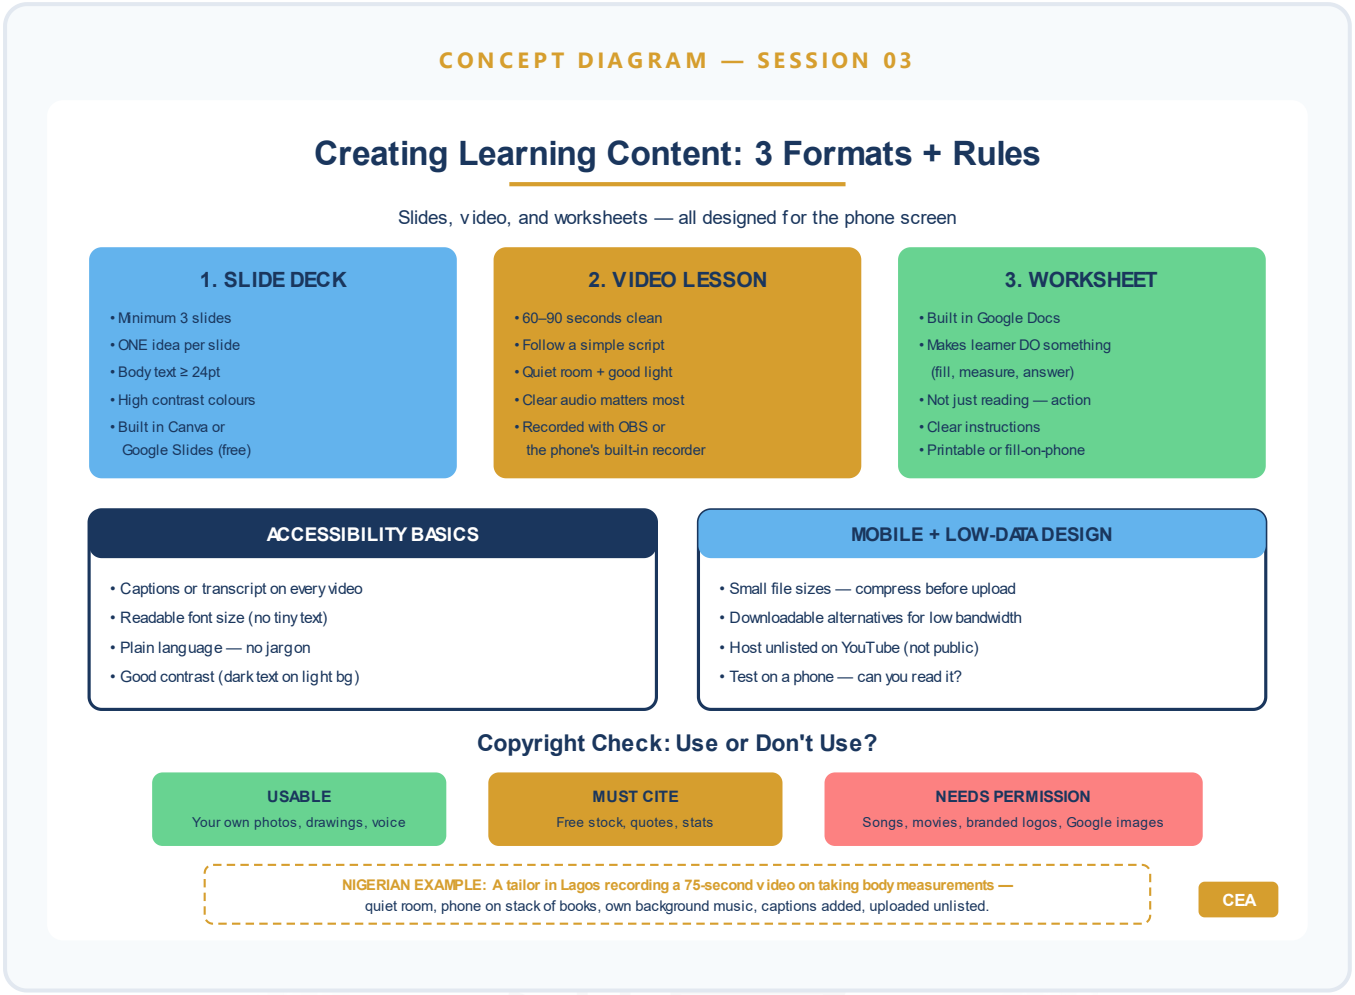

Timing guidance. The priority is **learners writing five real outcomes and completing a curriculum map** (Sections F.1â€"F.4 and H). If the room is slow, shorten the time-management lecture (F.6) to a 5-minute summary and protect the guided practical. A learner who leaves without five testable outcomes has no foundation for Session 3's content build.

END OF SESSION 2

Next: Session 3 â€" Creating Learning Content.

SESSION 03 OF 6

Creating Learning Content

CYBER ELIAS ACADEMY â€" ONLINE TEACHING

SESSION 3 â€" CREATING LEARNING CONTENT

A. SESSION IDENTIFICATION

Item	Detail
Session number	3 of 6
Session title	Creating Learning Content
Week / Module	Week 1 â€" Module 1: Design and Set Up
Recommended duration	105 minutes
Difficulty level	Beginner (hands-on building in free tools â€" no prior design or recording experience required)

Item	Detail
Prerequisite knowledge	Session 2 completed (or the ability to write a learning outcome and a lesson plan). A course idea with at least one lesson planned. A smartphone or laptop with a free Canva account and a free Google account. No prior Canva, OBS or recording experience required.
Connection to previous work	In Session 2 you designed the backbone: outcomes, a curriculum map and a timed lesson plan. Today you build the **material** for that lesson â€" slides, a short recorded video, a worksheet â€" and you learn the rules that keep your content honest, accessible and phone-friendly.
Preparation before class	Install OBS Studio on academy laptops (or confirm the built-in screen recorder works on phones). Confirm every learner can sign up for free Canva and Google accounts. Prepare a projector with a sample "bad" slide deck and a "good" slide deck (Section D). Print the copyright checklist (Section F.6) and the content pack checklist (Section H). Set up a quiet corner with natural light for recording practice. Have a sample 60â€"90 second recording ready to play. Read the Course Design Document Sections 6 and 15 before class.

Instructor note on tone: This is the "making" session â€" the most hands-on of Week 1. Learners will produce real artefacts today: a slide deck, a recording, a worksheet. Some will be nervous about recording themselves; normalise it ("your first recording will be imperfect â€" that is normal and expected"). Keep the focus on *clear and honest*, not *polished*. A learner who leaves with three usable artefacts has succeeded.

B. LEARNING OUTCOMES

By the end of this session, the learner will be able to:

1. **Design a short slide deck** (at least three slides) that works on a phone screen â€" one idea per slide, large readable type, high contrast â€" using Canva (free) or Google Slides.
2. **Record a 60â€"90 second clean video lesson** with clear audio, using OBS or the device's built-in recorder, following a simple script and a quiet, well-lit setup.
3. **Build a worksheet in Google Docs** that makes the learner *do* something â€" fill in, measure, answer or produce â€" not just read.
4. **Apply accessibility basics** to their content: captions or a transcript, readable font size, plain language and good contrast.
5. **Apply mobile-friendly, low-data design**: small file sizes, downloadable alternatives and unlisted hosting.
6. **Classify five copyright scenarios** correctly (usable / unusable without permission / must be cited) and use only their own, free-to-use or permitted material, with attribution.

C. REQUIRED MATERIALS

Hardware

- One smartphone per learner (with a camera and a notes app) or an academy laptop. Either is enough; both is ideal.
- Earphones with a microphone (the bundled pair is the baseline).
- Instructor device connected to a projector or large screen.
- A quiet corner with natural light (near a window) for recording practice â€" free and the cheapest production improvement there is.

Software (all free or built-in)

- **Canva** (free tier) or **Google Slides** â€" for slides.
- **Google Docs** â€" for worksheets.
- **OBS Studio** (free, open source) or the device's **built-in screen/voice recorder** â€" for recording.
- **YouTube** (unlisted) â€" for hosting recordings (set up in class or at home).
- A **notes app** â€" for scripts.

Sample files

- **"Bad" slide deck** (Section D) â€" tiny text, five ideas per slide, low contrast.
- **"Good" slide deck** (Section D) â€" one idea per slide, large type, high contrast.
- **Sample 60â€"90 second recording** â€" a clear, well-lit intro (the instructor's own, or Ngozi's model).
- **Copyright checklist** (Section F.6) â€" one per learner, printed.
- **Content pack checklist** (Section H) â€" one per learner, printed.

Worksheets

- Worksheet 3.1 â€" "Slide by Slide" (a planning table: slide number / one idea / what the learner does).
- Worksheet 3.2 â€" "My Recording Script" (a simple template: hook / value / CTA, with timings).
- Worksheet 3.3 â€" "Copyright Scenario Sort" (five scenarios to classify).

Accounts

- Free **Canva** account and free **Google** account (created in Session 1; create in class if needed). Free **YouTube** channel for unlisted hosting. Nothing costs money.

Internet

- Academy Wi-Fi in class for Canva, Google Docs and account creation. The lesson works offline for planning and scripting; recording needs no internet.

Alternative for learners who lack a facility

- Any phone with a camera and a notes app works. A learner with only a phone can complete every activity: Canva and Google Docs work in a phone browser, and the phone's built-in recorder is enough for the recording. A learner who cannot type quickly may dictate a script to a classmate.

Safety note: All content created today is the learner's own or free-to-use. No copyrighted music, images or video. No learner's personal data, and no images of minors, without written consent. Follow the academy's Ethics rules: collect less, protect more, ask permission, credit the owner, tell the truth.

D. OPENING ACTIVITY (6 minutes)

Instructor setup: Project two versions of the same slide â€" a "bad" slide and a "good" slide. Do not label them yet.

> ***Bad slide:*** *A slide titled "Sewing" with six bullet points in small font, a busy background, low contrast, and a paragraph of text at the bottom.*
>
> ***Good slide:*** *A slide with one big idea â€" "Take three measurements" â€" in large, high-contrast type, with one simple image and nothing else.*

What the instructor says:

> *"Good morning. Look at these two slides. They are about the same topic. I want you to imagine you are a learner, sitting on a bus in Port Harcourt, holding your phone, trying to read this slide on a small screen with one hand. Which slide can you actually read? â€¦ The second one, obviously. Now â€" why? What is different?"*

Let the class call out differences. Then reveal:

> *"The bad slide has too many ideas, tiny text, low contrast and a busy background. The good slide has **one idea, large type, high contrast and one image**. That is the whole rule of online slides: **one idea per slide, big enough to read on a phone, clear enough to see in bad light.** A slide is not a document â€" it is a signpost. If a learner cannot read it in two seconds on a phone, it is not a slide â€" it is a wall."*

Then play two short audio clips (or describe them):

> *"Now listen. Clip one: a person recording in a noisy room, far from the phone, with traffic in the background. Clip two: the same person, near a window, phone close, quiet room. Which audio is clearer? â€¦ The second.* ***Clear audio matters more than fancy video.*** *A learner will forgive a simple video; they will not forgive audio they cannot hear. Today you learn to make slides a phone can read and audio a learner can hear."*

Expected learner response: Learners will point at the good slide and say "it is simple," "big words," "one thing." Accept all answers and draw out the rules: one idea, large type, high contrast, one image. For audio, they will say "the second is clearer" â€" draw out: quiet room, near a window, phone close.

Why this opener works: It uses the phone â€" the device learners actually use â€" as the test. It teaches the two core rules (slide design and audio) through contrast before any definition, and it sets the standard: *if it does not work on a phone, it does not work.*

E. PREREQUISITE REVIEW (7 minutes)

Run this as a fast oral round-robin. Put the questions on the projector.

Question 1: "What is a learning outcome? Give one example from your own course."

- Expected answer: A sentence saying what the learner will be able to do â€" e.g., "Take three body measurements and record them accurately."
- Common gap: learners still write vague verbs. Clarify: "Check your outcome â€" does it start with an action verb? If it says 'understand,' rewrite it now."

Question 2: "What are the five parts of a lesson?"

- Expected answer: Opener, input, practice, check for understanding, exit task.
- Common gap: learners mix up the order. Clarify: "Opener first, exit task last. The practice is where the learning happens."

Question 3: "What is a curriculum map for?"

- Expected answer: To prove every outcome is taught and every lesson has a purpose.
- Common gap: some learners think it is optional paperwork. Clarify: "It is the proof your course works â€" it catches gaps before they become failures."

Question 4: "What mode did you choose in Session 1, and what free tools did you pick?"

- Expected answer: Each learner names their mode and tools.
- Common gap: some learners chose tools they have never used. Clarify: "Good â€" today you will actually use them. That is the point of this session."

Bridge to today (say this):

> *"You have the plan â€" outcomes, a map, a lesson. Now you build the material. A lesson is not a plan; it is* ***things a learner can use****: slides they can read on a phone, a video they can hear, a worksheet that makes them do something. Today you build all three â€" and you learn the rules that keep your content accessible, phone-friendly, low-data and honest."*

If more than a third of the class cannot name the five parts of a lesson, spend 5 extra minutes writing the five parts on the board with a one-line job for each before continuing.

F. FULL LECTURE NOTES

F.1 Slides that work on a phone

The idea. A slide is not a document. It is a **signpost** â€" one idea, big enough to read on a phone, clear enough to see in bad light. If a learner cannot read it in two seconds on a phone, it is not a slide â€" it is a wall.

The five rules of phone-friendly slides:

1. **One idea per slide.** One slide, one job. If you have five points, use five slides. A slide with five ideas is a document, and nobody reads a document on a phone.
2. **Large type.** Body text at least **24pt** (bigger is better); titles much bigger. If it fits comfortably on a phone screen without zooming, it is big enough. Test it: hold the phone at arm's length â€" can you read it?
3. **High contrast.** Dark text on a light background, or light text on a dark background. Never grey on grey, never yellow on white. Contrast is what makes text readable in sunlight on a bus.
4. **Few words.** Aim for **six words per slide** as a target, never more than a short sentence. If you need more words, say them â€" do not write them. Slides support your teaching; they are not your teaching.
5. **One clear image.** One image that supports the idea â€" not a decoration. If the image does not help the learner understand, remove it.

Canva vs Google Slides â€" which to use?

- **Canva (free):** Beautiful templates, drag-and-drop, free elements. Best for learners who want their slides to look professional fast. Use **free elements only** â€" never pay.
- **Google Slides:** Simple, free, works in any browser, easy to share. Best for learners who want speed and simplicity.
- Either is fine. The rules above matter more than the tool.

Worked example â€" Ngozi's three-slide deck for "Taking three body measurements":

Slide	One idea	What is on it
1	Title + outcome	"Taking Your Body Measurements" + "By the end, you will take three measurements and record them."
2	The three measurements	"Bust â€¢ Waist â€¢ Hip" â€" three words, one image of a tape measure.
3	How to do it	"Stand straight. Wrap the tape snug, not tight. Read the number. Write it down."

Say this to the class:

> *"Three slides. Three ideas. Could you read each one on a phone in two seconds? Yes. That is the test. Now imagine Ngozi put her whole script on the slides â€" every word she plans to say. That is the mistake. The slides are the signpost; Ngozi is the teacher. The learner watches the slides and listens to Ngozi â€" the two work together."*

Common misconception. "More slides = more content." No. More slides with more words = a course nobody reads. Ten slides with one idea each beat three slides with five ideas each.

F.2 Recording a short video lesson

The idea. A recorded lesson is you, teaching, captured on video. The goal is not a Hollywood film â€" it is **clear audio, clear picture, clear teaching**. A learner will forgive a simple video; they will not forgive audio they cannot hear or a lesson that rambles.

The five steps to a clean recording:

1. **Script first.** Write what you will say â€" a hook (grab attention), a value (the teaching), a CTA (what to do next). A script stops rambling. You do not have to read it word for word, but you must have it. (Use the template in Section H.)
2. **Set up the space.** Quiet room, near a window (natural light is free and flattering), phone close to you (arm's length), background tidy. Warn the household: "I am recording for 10 minutes â€" please do not disturb."
3. **Record in short takes.** Do not record 10 minutes in one go. Record the hook (30 seconds), then the first point (1 minute), then the second point. Short takes are easier to re-record when you make a mistake â€" and you will make mistakes.
4. **Keep the phone close.** The closer the phone, the clearer the audio. A phone on a table across the room sounds distant. A phone at arm's length sounds like a teacher.
5. **Cut the silences.** After recording, trim the long pauses, the "ums" and the false starts. Most phones and OBS let you trim simply. A tight 90 seconds beats a rambling 3 minutes.

OBS vs the built-in recorder:

- **OBS Studio** (free): Records your screen and/or camera. Best for lessons that show software, slides or a screen demo. Slightly more setup â€" but you only set it up once.
- **Built-in recorder** (free, already on the device): Records the camera and voice. Best for talking-head lessons â€" a skill demonstration, an introduction, a story. The simplest option.
- **Rule of thumb:** If the lesson is mostly *you talking and demonstrating*, use the built-in recorder. If the lesson is mostly *a screen*, use OBS.

Worked example â€" Ngozi's 60â€"90 second introduction:

> ***Hook (10 sec):*** *"Have you ever wanted to sew your own clothes but did not know where to start? I am Ngozi, and in this course you will cut and sew your first A-line skirt."*
>
> ***Value (50 sec):*** *"In five short lessons, I will show you how to take your measurements, choose your fabric, cut your pattern, sew your skirt and insert your zip. Each lesson is under 10 minutes, and you can watch them anytime, on your phone."*
>
> ***CTA (15 sec):*** *"Your first step: watch Lesson 1 and take your three measurements. I will see you there."*

Say this to the class:

> *"That is 75 seconds. Clear, warm, and it tells the learner exactly what will happen and what to do. You do not need a studio. You need a quiet corner, a window, a phone and a script. Your first recording will be imperfect â€" record it again. By the third take, you will be fine. That is normal."*

Common misconception. "I need a good camera." No. A 2018 smartphone camera is enough. Learners care about **clarity** â€" can they see and hear you â€" not about cinematic quality. Spend your effort on the script and the audio, not the camera.

F.3 Worksheets that make the learner do something

The idea. A worksheet is not a page of text â€" it is a **task**. The learner must *do* something: fill in, measure, answer, produce. A worksheet that only asks them to read is not a worksheet; it is a handout.

The four parts of a good worksheet:

1. **Title and outcome.** "Taking Your Body Measurements â€" by the end, you will have recorded three measurements." The learner knows why they are doing it.
2. **Clear instructions.** Short sentences, numbered steps, plain language. "1. Stand straight. 2. Wrap the tape around your bust. 3. Read the number. 4. Write it below."
3. **Space to do the task.** A table to fill in, a box to write in, a question to answer. The worksheet is where the learning happens.
4. **A submission instruction.** "Photograph your completed worksheet and submit it in Google Classroom." The learner knows what to do with it when they finish.

Worked example â€" Ngozi's measurement chart (Google Docs):

> ***My Body Measurements***
>
> *1. Stand straight, in front of a mirror.*
>
> *2. Measure your bust, waist and hip. Write each number below.*
>
> | *Measurement* | *My number (cm)* |
> |---|---|
> | *Bust* | |
> | *Waist* | |
> | *Hip* | |
>
> *3. Photograph this page and submit it in Google Classroom.*

Why Google Docs? It is free, works on any device, and the learner can type directly into the table. When they submit it, you can see their answers and give feedback. (You will set up the submission in Google Classroom in Session 5.)

Common misconception. "A worksheet is a PDF to print." No â€" a printable worksheet excludes learners without printers. A Google Doc worksheet works on a phone, needs no printer, and can be submitted digitally. Design for the phone and the printer becomes irrelevant.

F.4 Accessibility as standard

The idea. Accessibility means making content usable by *everyone* â€" including learners with poor eyesight, hearing difficulties, or who are watching in a noisy place. It is not an extra; it is **standard practice**, and it makes content better for everyone.

The four accessibility habits:

1. **Captions or a transcript.** Add captions to your video, or provide a transcript (a text version of what you said). Captions help learners who are deaf, learners watching in a noisy bus, and learners whose first language is not English. Many tools add captions automatically; you can also write a simple transcript in Google Docs.
2. **Readable font size.** At least 24pt for body text on slides; 14pt or larger in documents. If a learner needs to zoom, the font is too small.
3. **Plain language.** Short sentences, common words, no jargon without explanation. "Wrap the tape snug, not tight" beats "Ensure the measuring tape is applied with appropriate tension."
4. **Good contrast.** Dark text on light background (or the reverse). Never low-contrast combinations. Contrast helps learners with poor eyesight and everyone reading in sunlight.

Real-life comparison. Accessibility is like a **ramp at a building entrance**. It is built for wheelchair users, but it helps everyone â€" a parent with a pram, a delivery man with a trolley, a learner carrying books. Captions are built for deaf learners, but they help everyone watching in a noisy place. Design for the edges and you help the middle too.

Say this to the class:

> *"Accessibility is not 'extra work for special people.' It is the difference between content that works for everyone and content that works for some. A learner watching your video on a bus with noise around them â€" captions are not optional for that learner. They are the lesson."*

F.5 Mobile-friendly, low-data design

The idea. Nigerian data is expensive and connections are uneven. A 500MB video is not a lesson â€" it is a barrier. Design content that works on a phone, on slow data, in the real world.

The five low-data habits:

1. **Short videos.** 5â€"8 minutes per lesson, never 30. A short video downloads faster, buffers less, and fits a learner's attention span.
2. **Small files.** Compress images and videos before uploading. A 10MB video is kinder than a 100MB video. Free tools compress automatically; check the file size before uploading.
3. **Downloadable alternatives.** Offer a downloadable version (a PDF of the slides, an audio-only version) so learners can download once on Wi-Fi and watch offline later.
4. **Unlisted hosting.** Host recordings on YouTube as **unlisted** â€" only people with the link can watch. Unlisted videos buffer well and are not public.
5. **Test on a phone, on mobile data.** Before you publish, watch your own video on a phone, on mobile data, in a moving bus if you can. If it buffers or the audio drops, fix it before your learners find the problem.

Real-life comparison. Low-data design is like **packaging food for a journey**. You would not send a learner a whole goat to cook on the bus â€" you send a wrapped portion they can manage. A 500MB video is the whole goat. A 10MB video is the wrapped portion. Package for the journey.

Common misconception. "Learners can just use Wi-Fi." Many learners are on mobile data, at home, at night, on a bus. Design for the learner with the least â€" and you serve everyone.

F.6 Copyright â€" use what is yours, free or permitted

The idea. Copyright means the person who made something owns it. Using someone else's material without permission is theft â€" and it is also a fast way to lose trust, get reported, or face legal trouble. The rule is simple: **use what you made, what is free to use, or what you have permission for â€" and credit the owner.**

The three categories:

Category	What it means	Examples
Usable â€" your own	You made it; you own it.	Your photos, your slides, your script, your recordings.
Usable â€" free, with attribution	Free to use under a licence (like Creative Commons), but you must credit the owner.	Free images with a CC licence, free music with attribution, free Canva elements.
Unusable without permission	Someone else owns it; you need their permission.	Another teacher's slides, a paid course's material, copyrighted music, film clips, most images from Google.

The five copyright scenarios (for the sort exercise):

1. A photo you took of your own sewing machine. â†' **Usable â€" your own.**
2. A free Canva element (marked "free") used in your slide. â†' **Usable â€" free** (Canva's free elements are free to use; no attribution needed for free elements, but credit is good practice).
3. A background song from a popular Nigerian artist, added to your video. â†' **Unusable without permission** (copyrighted music).
4. A diagram from a textbook, scanned into your worksheet. â†' **Unusable without permission** (someone else's work).
5. A free image from a site that says "Creative Commons â€" attribution required." â†' **Usable â€" free, with attribution** (you must credit the owner).

Creative Commons (CC) in plain English: A Creative Commons licence is the owner saying, "You may use my work if you follow these rules." The rules vary â€" some require attribution, some forbid commercial use, some forbid changes. **Read the licence and follow it.** When in doubt, credit the owner.

Say this to the class:

> *"The rule is simple: **collect less, protect more, ask permission, credit the owner, tell the truth.** If you did not make it, and it is not free, and you do not have permission â€" do not use it. A course built on other people's material is a course built on sand. A course built on your own knowledge and free tools is a course that lasts."*

Common misconception. "If it is on the internet, it is free to use." No. The internet is a library, not a free-for-all. A photo on Google Images is usually someone's property. Use free sources (your own photos, free Canva elements, sites that explicitly offer free use) and credit them.

F.7 Summary of the lecture

- **Slides:** one idea per slide, large type (24pt+), high contrast, few words, one clear image.
- **Recording:** script first, quiet space, near a window, phone close, record in short takes, cut the silences. Clear audio beats fancy video.
- **Worksheets:** a task, not a page of text â€" title, instructions, space to do it, submission step. Google Docs, phone-friendly.
- **Accessibility:** captions or a transcript, readable font, plain language, good contrast â€" standard, not optional.
- **Low-data design:** short videos, small files, downloadable alternatives, unlisted hosting, test on a phone.
- **Copyright:** use what you made, what is free (with attribution), or what you have permission for. Never copy another teacher's material.

```

G. INSTRUCTOR DEMONSTRATION (15 minutes)

Goal: Walk the class through building Ngozi's content pack â€" a three-slide deck, a 60â€"90 second recording script, and a worksheet â€" thinking aloud so learners see the *decisions*, not just the result.

Setup: Project Canva (or Google Slides) with a blank presentation. Have the recording script template and the worksheet template ready. Play the sample 60â€"90 second recording.

G.1 Step 1 â€" Build the three-slide deck (5 minutes)

Say: "Ngozi's lesson is 'Taking three body measurements.' One idea per slide. Let me build it."

Build the deck live in Canva (free):

> ***Slide 1:*** *Title â€" "Taking Your Body Measurements" + the outcome: "By the end, you will take three measurements and record them."* ***Slide 2:*** *The three measurements â€" "Bust â€¢ Waist â€¢ Hip" with one image of a tape measure.* ***Slide 3:*** *How to do it â€" "Stand straight. Wrap the tape snug, not tight. Read the number. Write it down."*

Say: "Three slides. One idea each. Large type â€" I will set the body text to 28pt. High contrast â€" dark text on white. One image on slide 2. Could a learner read each slide on a phone in two seconds? Yes. That is the test."

Point out the Canva choices: "I used a free template and free elements only. I did not pay anything. If I wanted a premium element, I would find a free one instead â€" the free tier is enough."

G.2 Step 2 â€" Write the recording script (4 minutes)

Say: "Now the video. I do not record without a script â€" a script stops rambling. Here is the template."

Write the script on the board (as in Section F.2):

> ***Hook (10 sec):*** *"Have you ever wanted to sew your own clothes but did not know where to start? I am Ngozi, and in this course you will cut and sew your first A-line skirt."*
>
> ***Value (50 sec):*** *"In five short lessons, I will show you how to take your measurements, choose your fabric, cut your pattern, sew your skirt and insert your zip. Each lesson is under 10 minutes, and you can watch them anytime, on your phone."*
>
> ***CTA (15 sec):*** *"Your first step: watch Lesson 1 and take your three measurements. I will see you there."*

Say: "Seventy-five seconds. I will record it in three takes â€" hook, value, CTA â€" so if I stumble on the value, I only re-record the value. I will sit near the window, phone at arm's length, quiet room. I will cut the silences after. That is the whole process."

G.3 Step 3 â€" Build the worksheet (4 minutes)

Say: "Now the worksheet. A worksheet is a task, not a page of text. The learner must *do* something."

Build the worksheet live in Google Docs (as in Section F.3):

> ***My Body Measurements***
>
> *1. Stand straight, in front of a mirror.*
> *2. Measure your bust, waist and hip. Write each number below.*

Measurement	*My number (cm)*
Bust	
Waist	

Measurement	*My number (cm)*
Hip	

3. Photograph this page and submit it in Google Classroom.

Say: "Title, outcome, numbered instructions, a table to fill in, a submission step. The learner measures themselves â€" that is the learning. The table is where it happens. And it is a Google Doc, so it works on a phone and needs no printer."

G.4 Step 4 â€" The copyright check (2 minutes)

Say: "Finally, the copyright check. Every image, every piece of music, every element â€" where did it come from?"

Run through the checklist:

- Slide images: free Canva elements â†' **usable, free.**
- Recording audio: Ngozi's own voice â†' **usable, her own.**
- Background music: none (to keep it simple and copyright-safe) â†' **no risk.**
- Worksheet: Ngozi's own words â†' **usable, her own.**

Say: "Everything here is either Ngozi's own or free to use. She copied nothing, she paid nothing, and she credits nothing because there is nothing to credit. That is how it should be."

The finished content pack (project it):

> ***NGOZI'S CONTENT PACK â€" Lesson 1: Taking Your Body Measurements***
>
> - ***3-slide deck:*** *Title + outcome / Bust â€¢ Waist â€¢ Hip / How to do it.*
> - ***Recording script:*** *Hook (10s) + Value (50s) + CTA (15s) = 75 seconds.*
> - ***Worksheet:*** *My Body Measurements â€" a table to fill in and submit.*
> - ***Copyright check:*** *All own or free. No copied material. No paid material.*

Questions to ask during the demo:

- "Why one idea per slide?" (A slide is a signpost, not a document.)
- "Why record in three takes?" (If you stumble, you only re-record that part.)
- "Why is the worksheet a Google Doc and not a PDF?" (It works on a phone, needs no printer, and can be submitted digitally.)
- "What would make this content pack a copyright problem?" (Adding a popular song, or scanning a textbook diagram.)

Expected result: Learners see that a content pack is not a mystery â€" it is three simple artefacts, each following clear rules, all free. They now have a complete model to copy.

H. GUIDED PRACTICAL EXERCISE (18 minutes)

Objective: With the instructor guiding, each learner builds their own **three-slide deck** and starts their **worksheet** for their Lesson 1.

Starting materials: Canva (free) or Google Slides, Google Docs, the slide-by-slide planner (Worksheet 3.1), a pen or notes app.

Procedure (instructor calls out each step; learners follow; instructor walks the room):

1. Open your slide planner (Worksheet 3.1). Write your **lesson title** and **outcome** â€" this is slide 1.
2. Write **one idea** for slide 2 and **one idea** for slide 3. (If your lesson has more ideas, that is fine â€" but start with three slides.)
3. Open Canva or Google Slides. Create a new presentation.
4. Build **slide 1**: the title and the outcome. Use large type (24pt+), high contrast.
5. Build **slide 2**: one idea, one image (free only), few words.
6. **Pause and predict:** Hold your phone at arm's length. Can you read slide 2 without zooming? If not, make the type bigger.
7. Build **slide 3**: one idea, few words, high contrast.

8. Now open Google Docs. Start your **worksheet**: title, outcome, numbered instructions, and a space for the learner to do the task.
9. **Check for copyright:** every image and element â€" is it yours or free? If not, replace it.

Expected result: A three-slide deck and a draft worksheet for their own Lesson 1.

Points to pause on and predict:

- After step 2: "Who has more than one idea for slide 2? What is the one idea you will keep?" (Teach: one idea per slide.)
- After step 6: "Who could not read their slide at arm's length? Fix the type size now."

Troubleshooting while walking the room:

- Slide has too many words â†' "Cut to six words. Say the rest â€" do not write it."
- Type too small â†' "Increase to 28pt. Test at arm's length."
- Low contrast â†' "Dark text on white, or white on dark. No grey on grey."
- Image is from Google â†' "Is it free? If you do not know, use a free Canva element or your own photo."
- Worksheet is all text â†' "Add a task â€" a table, a box, a question. The learner must *do* something."

Completion checklist (learner ticks each):

- ☐ Slide 1: title + outcome, large type, high contrast
- ☐ Slide 2: one idea, one free image, few words
- ☐ Slide 3: one idea, few words, high contrast
- ☐ Every slide readable at arm's length on a phone
- ☐ Worksheet: title, outcome, instructions, task space, submission step
- ☐ Every image and element is mine or free

I. INDEPENDENT CLASS EXERCISE (15 minutes)

Task (new task, done alone): Record a **60â€"90 second introduction** to your course and complete your **copyright checklist**.

Scenario. You are the instructor of your own course. You have your three-slide deck from the guided exercise. Now you record a short introduction â€" the video a learner sees first â€" and you prove every piece of your content is yours or free.

Requirements:

1. Write a **script** for your 60â€"90 second introduction: a hook (grab attention), a value (what the course teaches), a CTA (what to do first).
2. **Record** it â€" 60 to 90 seconds â€" using your phone's built-in recorder or OBS. Find a quiet spot, near a window if you can, phone close. Record in short takes if it helps.
3. **Complete the copyright checklist** for your content pack: for every image, element, song and piece of text, state whether it is **yours**, **free (with attribution)**, or **needs permission** â€" and if it needs permission, replace it.
4. **Classify the five copyright scenarios** (Worksheet 3.3) as usable / unusable without permission / must be cited.

Time allowance: 15 minutes.

Success criteria:

- Recording is 60â€"90 seconds, with clear audio (quiet room, phone close).
- Script has a hook, a value and a CTA.
- Copyright checklist is complete â€" every item accounted for.
- Five scenarios classified correctly.

Hints if stuck:

- Hint 1: Keep the script short â€" 75 seconds is about 150 words. Write it, then cut it in half.
- Hint 2: If you stumble, record that take again. Short takes make this easy.
- Hint 3: For the copyright sort, ask: "Did I make it? Is it free? Do I have permission?" If none of the three, do not use it.

INSTRUCTOR ANSWER KEY (model solution â€" do not show learners):

MODEL RECORDING SCRIPT â€" NGOZI (75 seconds): *Hook (10s): "Have you ever wanted to sew your own clothes but did not know where to start? I am Ngozi, and in this course you will cut and sew your first A-line skirt." Value (50s): "In five short lessons, I will show you how to take your measurements, choose your fabric, cut your pattern, sew your skirt and insert your zip. Each lesson is under 10 minutes, and you can watch them anytime, on your phone." CTA (15s): "Your first step: watch Lesson 1 and take your three measurements. I will see you there."*

MODEL COPYRIGHT CHECKLIST:

- *Slide images: free Canva elements â†' usable, free.*
- *Recording audio: Ngozi's own voice â†' usable, her own.*
- *Background music: none â†' no risk.*
- *Worksheet: Ngozi's own words â†' usable, her own.*

MODEL COPYRIGHT SCENARIO SORT:

1. *Photo of own sewing machine â†' usable, own.*
2. *Free Canva element â†' usable, free.*
3. *Popular song â†' unusable without permission.*
4. *Scanned textbook diagram â†' unusable without permission.*
5. *Free image with CC attribution â†' usable, free, must be cited.*

Learner marking (out of 10):

- *Recording 60â€"90 seconds with clear audio (3)*
- *Script has hook, value, CTA (2)*
- *Copyright checklist complete (2)*
- *Five scenarios classified correctly (3)*

J. REAL-WORLD CASE STUDY

Situation. *Adaeze* runs a small hairdressing academy in Port Harcourt. She teaches braiding and weaving to eight apprentices in her salon. She decided to create an online course â€" "Braiding Basics: Three Styles for Beginners" â€" and she worked hard on it. She recorded a 12-minute video of herself braiding, added a popular Nigerian song as background music, used beautiful images she found on Google for her slides, and scanned a page from a hairdressing textbook into her worksheet. She uploaded the video to YouTube as **public** and shared the link in a WhatsApp group. Within a week, three learners told her they could not watch the video â€" it kept buffering on their phones. A fourth learner messaged: "Adaeze, this song is nice, but is it yours?"

Relevant facts.

- Adaeze's braiding demonstration is genuinely good â€" clear, skilled, well-lit.
- The video is 12 minutes long and 180MB â€" too big for mobile data.
- The background song is a copyrighted popular artist's track.
- The slide images are from Google Images â€" not confirmed free.
- The scanned textbook page is someone else's work.
- The video is public on YouTube â€" anyone can find it.

Decision point. Adaeze's course is failing. What should she change?

Possible approaches.

1. **Do nothing â€" the learners' phones are the problem.** Blame the learners and their data.
2. **Fix only the video length** â€" split the 12-minute video into three shorter ones, but keep everything else.
3. **Fix everything** â€" re-record shorter, remove the copyrighted music, replace the Google images, remove the scanned page, and make the video unlisted.

Recommended solution. Approach 3. Here is the reasoning:

- **Why not 1?** The learners' phones are not the problem â€" the design is. A 180MB video on mobile data is a barrier, not a lesson.

- **Why not 2?** Splitting the video helps, but the copyright problems remain. The song, the images and the scanned page are all someone else's work. Using them without permission is theft â€" and it risks Adaeze's reputation and legal trouble.
- **Why 3?** Every problem has a simple, free fix.

The fixes (what Adaeze did):

- **Video length:** Split the 12-minute video into three 4-minute lessons â€" one per style. Each under 20MB after compression.
- **Copyright â€" music:** Removed the popular song. Used no music (or a free, royalty-free track with attribution).
- **Copyright â€" images:** Replaced the Google Images with her own photos of her work and free Canva elements.
- **Copyright â€" textbook:** Removed the scanned page. Wrote her own instructions in her own words.
- **Hosting:** Changed the video from public to **unlisted** â€" only learners with the link can watch.
- **Accessibility:** Added a simple transcript in Google Docs for each lesson.
- **Low-data:** Compressed the videos and offered a downloadable PDF of the slides.

The result: The three learners who could not watch the video now completed all three lessons. The fourth learner said: "Now it feels like your course â€" your voice, your work, your rules." Adaeze's course was not more talented after the fix â€" it was more **honest, accessible and legal**. That is what made it work.

Trade-offs.

- The fixes took Adaeze one evening. That is the investment this session asks of every learner.
- Her course is simpler now â€" shorter videos, fewer images, no music. Simplicity is not a loss; it is the design.
- She could have paid for a music licence and a stock photo subscription. She did not need to â€" free alternatives were enough.

Professional connection. This is the pattern: **content that works is content that is clear, legal, accessible and kind to data.** A course that ignores any of these will fail â€" not because the teaching is bad, but because the design is. Master these rules and your content will outlast the competition.

K. COMMON MISTAKES AND TROUBLESHOOTING

Use this table as the live guide. Point learners to the row rather than giving the answer.

K.1 Slides with too many ideas and tiny text

Symptoms: Learners cannot read the slides on a phone; the slide looks like a document. **Likely cause:** The learner put their script on the slides instead of their teaching points. **How to investigate:** Hold the slide at arm's length on a phone. Can you read it in two seconds? If not, it fails. **Corrective steps:** One idea per slide; cut to six words; increase type to 28pt; add more slides if needed. **How to confirm resolved:** Each slide has one idea, readable at arm's length. **Prevention:** Plan slides with the slide-by-slide planner before opening Canva.

K.2 Recording in a noisy room, far from the phone

Symptoms: Audio is unclear; learners cannot hear the lesson. **Likely cause:** The learner recorded in a busy room with the phone on a table across the room. **How to investigate:** Listen to the recording with earphones. Can you hear every word? If not, the setup failed. **Corrective steps:** Quiet room, near a window, phone at arm's length, warn the household. Re-record. **How to confirm resolved:** Every word is clear on earphones. **Prevention:** Always do a 10-second test recording and listen before the full take.

K.3 Recording one long take and stumbling

Symptoms: A 10-minute recording with mistakes, "ums" and dead air. **Likely cause:** The learner tried to record the whole lesson in one go without a script. **How to investigate:** Listen â€" are there long pauses and false starts? **Corrective steps:** Use a script; record in short takes (hook, then each point); cut the silences after. **How to confirm resolved:** The final video is tight, with no dead air. **Prevention:** Script first, short takes always.

K.4 A worksheet that only asks the learner to read

Symptoms: A page of text with no task; the learner reads but does nothing. **Likely cause:** The learner designed a handout, not a worksheet. **How to investigate:** Ask: "What does the learner do?" If the answer is "read," it is not a worksheet. **Corrective steps:**

Add a task â€” a table to fill, a question to answer, a measurement to take. **How to confirm resolved:** The learner produces something (a filled table, an answer, a photo). **Prevention:** Every worksheet must have a task and a submission step.

K.5 Using copyrighted music, images or text

Symptoms: A popular song in the video; Google Images on slides; a scanned textbook page. **Likely cause:** The learner assumed "on the internet = free to use." **How to investigate:** For each item, ask: "Did I make it? Is it free? Do I have permission?" If none, it is a problem. **Corrective steps:** Replace with own work, free elements (with attribution), or get permission. **How to confirm resolved:** Every item is accounted for on the copyright checklist. **Prevention:** Run the copyright checklist before publishing anything.

K.6 Heavy files that buffer on mobile data

Symptoms: A 180MB video that learners cannot download. **Likely cause:** The learner uploaded an uncompressed video. **How to investigate:** Check the file size. Over 30MB for a short lesson is too big. **Corrective steps:** Compress the video; split long lessons into short ones; offer a downloadable alternative. **How to confirm resolved:** The video is under 20MB and plays on mobile data. **Prevention:** Compress before uploading; test on a phone on mobile data.

K.7 No captions or transcript

Symptoms: A video with no text support; learners in noisy places cannot follow. **Likely cause:** The learner did not think about accessibility. **How to investigate:** Watch the video in a noisy place. Can you follow without sound? If not, captions are needed. **Corrective steps:** Add captions (automatic or manual) or provide a transcript in Google Docs. **How to confirm resolved:** The lesson works with the sound off. **Prevention:** Treat captions as standard, not optional.

Distinguish likely vs confirmed: A "likely cause" becomes "confirmed" only after you check it â€” for example, the learner can actually show a slide that fails the arm's-length test, or actually point to the copyrighted item. Teach learners to confirm before concluding.

L. SESSION ASSIGNMENT

Assignment title: "My Content Pack â€” Slides, Recording, Worksheet and Copyright Checklist"

Purpose: To practise building real learning content in free tools â€” the material your course will actually use â€” and to build the capstone's content pack and copyright note.

Realistic scenario. You are the instructor of your own course. You have your lesson plan from Session 2. Now you build the content for your Lesson 1: slides a learner can read on a phone, a short recorded introduction with clear audio, a worksheet that makes the learner do something, and a copyright checklist that proves your content is honest. This content pack becomes part of your capstone in Session 6.

Detailed instructions:

1. Build a **three-slide deck** for your Lesson 1: one idea per slide, large type (24pt+), high contrast, one clear image per slide (free only).
2. Write a **script** for a 60â€“90 second introduction to your course: hook, value, CTA.
3. **Record** the introduction â€” 60 to 90 seconds â€” with clear audio (quiet room, phone close, near a window if you can).
4. Build a **worksheet** in Google Docs: title, outcome, numbered instructions, a task the learner does, and a submission step.
5. Complete a **copyright checklist**: for every image, element, song and piece of text, state whether it is yours, free (with attribution), or needs permission â€” and replace anything that needs permission.
6. Write **one paragraph** (5â€“7 sentences) explaining: "How is my content accessible, mobile-friendly and low-data?"

Required deliverables:

- A three-slide deck (link or screenshots).
- A 60â€–90 second recording (link or file).
- A worksheet in Google Docs (link).
- A completed copyright checklist.
- One paragraph on accessibility and low-data design.

Submission format: Save as `A3_YourName.docx` (or `.pdf` or a folder of files) and upload to `/Online-Teaching/Week1/A3/`. Include links to your Canva deck, your recording (unlisted) and your Google Doc worksheet.

Deadline: Before Session 4.

Marking rubric (10 marks):

Criterion	Marks	Description of a strong answer
Slides work on a phone	2	One idea per slide, large type, high contrast, readable at arm's length
Recording is clear	2	60â€“90 seconds, clear audio, hook/value/CTA
Worksheet makes the learner do something	2	Title, outcome, instructions, task, submission step
Copyright checklist complete	2	Every item accounted for; nothing needs permission
Accessibility & low-data paragraph	2	Clear, specific, covers captions, font, plain language, small files

Common mistakes to avoid: slides with too many words; recording in a noisy room; a worksheet that only asks the reader to read; copyrighted music or images; heavy files; no captions.

INSTRUCTOR REFERENCE SOLUTION (do not show learners):

> ***Content pack â€" Ngozi's Lesson 1 (model):***
>
> - ***Three-slide deck:*** *(1) Title + outcome; (2) Bust â€¢ Waist â€¢ Hip + one image; (3) How to do it â€" three short steps. All 28pt+, dark on white.*
> - ***Recording:*** *75 seconds â€" hook (10s), value (50s), CTA (15s). Quiet room, near a window, phone at arm's length. Clear audio.*
> - ***Worksheet:*** *"My Body Measurements" â€" a table to fill in and submit in Google Classroom.*
> - ***Copyright checklist:*** *All own or free Canva elements. No music. No copied material.*
> - ***Accessibility & low-data paragraph (model):*** *"My slides use 28pt type and dark-on-white contrast so they are readable on a phone in sunlight. My recording is 75 seconds and under 10MB, so it downloads quickly on mobile data. I have provided a transcript of the recording in Google Docs for learners who cannot play audio. My worksheet is a Google Doc, so it works on a phone and needs no printer. Every image is a free Canva element or my own photo, and I have credited nothing because there is nothing to credit â€" the content is mine."*

M. KNOWLEDGE CHECK

(Learner version â€" answers only in the Instructor Key below.)

Q1. Short answer. What are the five rules of a phone-friendly slide?

Q2. Multiple choice. Which of these is the best slide? a) A slide with six bullet points in 12pt font. b) A slide with one idea in 28pt font, dark text on white, one image. c) A slide with a paragraph of text and a busy background. d) A slide with five ideas and a decorative border.

Q3. Explain. Why is clear audio more important than fancy video?

Q4. Practical. A learner records a 10-minute video in one take, in a noisy room, with the phone on a table across the room. List three things they should do differently.

Q5. Matching. Match each copyright category to its example: **usable â€" own / usable â€" free with attribution / unusable without permission.** a) A photo you took of your own work. b) A popular Nigerian artist's song. c) A free image that says "Creative Commons â€" attribution required."

Q6. Scenario. Your video is 180MB and learners on mobile data cannot watch it. What are two things you can do?

INSTRUCTOR ANSWER KEY (Q1â€"Q6)

A1. The five rules: (1) one idea per slide; (2) large type (24pt+); (3) high contrast; (4) few words (six or fewer); (5) one clear image. (Accept all five.)

A2. (b) A slide with one idea in 28pt font, dark text on white, one image. (One idea, large type, high contrast, one image â€" it passes the arm's-length test.)

A3. Because a learner will forgive a simple video but will not forgive audio they cannot hear. If the audio is unclear, the learner cannot learn at all â€" no matter how good the video looks. Clear audio is the lesson; the video is the picture.

A4. Three things: (1) record in a quiet room (not a noisy one); (2) keep the phone close â€" at arm's length, not across the room; (3) use a script and record in short takes instead of one long take. (Accept any three correct improvements.)

A5. usable â€" own = (a); unusable without permission = (b); usable â€" free with attribution = (c).

A6. Two things: (1) compress the video to make the file smaller; (2) split the long video into shorter lessons (e.g., three 4-minute videos instead of one 12-minute video). (Also acceptable: offer a downloadable alternative so learners can download once on Wi-Fi.)

N. REFLECTION AND RECAP

Plain-English summary. Today you learned to build the material of a course. You learned that **slides are signposts, not documents** â€" one idea per slide, large type, high contrast, few words, one clear image. You learned to **record a short video** with clear audio: script first, quiet room, near a window, phone close, record in short takes, cut the silences. You learned that a **worksheet is a task** â€" it makes the learner *do* something, not just read. You learned that **accessibility is standard** â€" captions or a transcript, readable font, plain language, good contrast. You learned **low-data design** â€" short videos, small files, downloadable alternatives, unlisted hosting, test on a phone. And you learned **copyright** â€" use what you made, what is free (with attribution), or what you have permission for; never copy another teacher's material.

Five important takeaways:

1. **Slides:** one idea, large type, high contrast, few words, one image â€" readable on a phone in two seconds.
2. **Recording:** clear audio beats fancy video â€" script, quiet, close, short takes.
3. **Worksheets:** a task, not a page of text â€" the learner must *do* something.
4. **Accessibility and low-data are standard** â€" captions, readable font, small files, unlisted hosting.
5. **Copyright:** yours, free (with attribution), or permitted â€" nothing else.

Questions to help you recognise what you can now do:

- Can I design a slide that passes the arm's-length test?
- Can I record a 60â€"90 second introduction with clear audio?
- Can I build a worksheet that makes the learner do something?
- Can I explain why captions are not optional?
- Can I classify a copyright scenario correctly?
- Can I state two ways to make a video kinder to mobile data?

Connection to the next session. You now have a designed course (Session 2) and real content (Session 3). But content sitting in a folder is not teaching â€" **teaching happens live, with real people, in real time.** Next session â€" **Running Live Classes and Engagement** â€" you will learn to host a live class on Zoom or Google Meet: screen share, chat, polls, hand raise, breakout rooms, waiting room, recording. You will learn the **engagement rhythm** â€" something asked or done at least every eight minutes â€" and you will deliver a 10-minute micro-teach. Bring your content; you will teach with it.

O. INSTRUCTOR EVALUATION NOTES

Observable signs of genuine competence:

- Learner's slides pass the arm's-length test without being told to check.
- Learner's recording has clear audio â€" quiet room, phone close, no background noise.
- Learner's worksheet has a task and a submission step, not just text.
- Learner's copyright checklist is complete and honest.

- Learner can explain why captions and small files matter, not just that they "should" do them.
- Learner catches a copyrighted item in a partner's work during the practical.

Common misconceptions to watch for and correct:

- "Slides are documents." â†' They are signposts â€" one idea per slide.
- "I need a good camera." â†' You need clear audio and a script; the camera is secondary.
- "A worksheet is a handout." â†' It is a task â€" the learner must do something.
- "Captions are for deaf learners only." â†' They help everyone, especially learners in noisy places.
- "If it is on the internet, it is free." â†' Use only what is yours, free, or permitted.
- "A big video is more valuable." â†' A small video that plays is more valuable than a big video that buffers.

Suggested remedial exercises for learners who struggle:

1. **Slide fix drill:** give a "bad" slide (tiny text, five ideas); the learner rewrites it as three phone-friendly slides.
2. **Audio test:** the learner records 30 seconds in a noisy room, then 30 seconds in a quiet room near a window â€" and compares.
3. **Copyright sort drill:** give ten mixed items (own photos, free elements, popular songs, textbook pages); the learner sorts them into the three categories.

Differentiation:

- **Level 1 (supported):** provide a slide template with the type size and contrast already set; the learner adds one idea per slide. Provide a worksheet template with the task already designed; the learner writes the instructions.
- **Level 2 (standard):** the session as written â€" three slides, a recording, a worksheet, a copyright checklist.
- **Level 3 (challenge):** ask the learner to record a **second** version of their introduction with captions added, and to write a short paragraph comparing the two versions â€" which is more accessible, and why.

Capstone links. The content pack completed today (slides, recording, worksheet, copyright checklist) becomes the **mini-lesson's content pack and copyright note** in the capstone in Session 6. A learner who completes it well already owns a major piece of the final submission. Remind learners to keep every artefact in their working folder (`CEA-OT-FirstnameLastname`).

Timing guidance. The priority is **learners building real content** (Sections H and I). If the room is slow, shorten the low-data lecture (F.5) to a 5-minute summary and protect the guided practical. A learner who leaves without a three-slide deck and a recording has no content for Session 4's micro-teach.

END OF SESSION 3

Next: Session 4 â€" Running Live Classes and Engagement.

SESSION 04 OF 6

Running Live Classes and Engagement

CONCEPT DIAGRAM — SESSION 04

CYBER ELIAS ACADEMY â€" ONLINE TEACHING

SESSION 4 â€" RUNNING LIVE CLASSES AND ENGAGEMENT

A. SESSION IDENTIFICATION

Item	Detail
Session number	4 of 6
Session title	Running Live Classes and Engagement
Week / Module	Week 2 â€" Module 2: Deliver and Grow
Recommended duration	105 minutes
Difficulty level	Beginner (hosting and engagement â€" no prior hosting experience required)
Prerequisite knowledge	Session 3 completed (or the ability to share a screen and use chat). A course idea with at least one piece of content (slides or a worksheet). A free Zoom or Google Meet account. No prior

Item	Detail
	hosting experience required.
Connection to previous work	In Sessions 1â€“3 you designed and built your course. Today you **run it** â€” as the host of a live class. You will learn the host's toolkit, the engagement rhythm, classroom management and troubleshooting, and you will deliver a 10-minute micro-teach.
Preparation before class	Confirm every learner can host a free Zoom or Google Meet call (test the host controls). Prepare a projector with the host's toolkit diagram (Section F.1). Print the engagement plan template (Section G) and the troubleshooting checklist (Section F.4). Prepare three technical-failure scenario cards (Section I). Set up a sign-up sheet for the 10-minute micro-teaches. Read the Course Design Document Sections 5 (LO5) and 8 before class.

Instructor note on tone: This is the "performance" session â€” the most nervous-making of the course. Many learners have only ever been *participants* on calls; today they become *hosts*. Normalise the nerves ("every good host was once a first-time host"), model calm troubleshooting, and make the micro-teach a safe, supported experience. The goal is not a perfect lesson â€” it is a *hosted* lesson with at least two moments of real participation.

B. LEARNING OUTCOMES

By the end of this session, the learner will be able to:

1. **Host** a short live class on Zoom or Google Meet as the host â€” using screen share, chat, and at least two participation tools (poll, hand raise, whiteboard or breakout rooms).
2. **State three online classroom norms** and manage latecomers and disruption calmly and fairly.
3. **Design an engagement rhythm** with something asked or done at least every eight minutes â€” a poll, a chat prompt, a show of hands or a breakout pair task.
4. **Diagnose and respond correctly** to at least three common technical failures using a checklist (sound â†' camera â†' screen share â†' connection) and a written fallback plan.
5. **Deliver a 10-minute micro-teach** using at least two participation tools, with a clear opening, content, interaction and a closing check for understanding.

C. REQUIRED MATERIALS

Hardware

- One smartphone per learner (with the Zoom or Google Meet app installed) or an academy laptop. Either is enough.
- Earphones with a microphone (the bundled pair is fine).
- Instructor device connected to a projector or large screen.
- A stable internet connection â€” academy Wi-Fi, with a mobile-data fallback plan.

Software (all free)

- **Zoom** (free tier, host account) *or* **Google Meet** (free with a Google account) â€” the live class tool.
- **Canva** or **Google Slides** â€” for the slides the learner will share.
- **Google Docs** â€ for the engagement plan and the fallback plan.

Sample files

- **Host's toolkit diagram** (Section F.1) â€ projected and printed.
- **Engagement plan template** (Section G) â€ one per learner, printed.
- **Troubleshooting checklist** (Section F.4) â€ one per learner, printed.
- **Three technical-failure scenario cards** (Section I) â€ for the independent exercise.
- **Micro-teach sign-up sheet** â€ for the 10-minute deliveries.

Worksheets

- Worksheet 4.1 â€ "My Engagement Plan" (time / what happens / participation tool / what the learner does).

- Worksheet 4.2 â€" "My Fallback Plan" (if X fails, I will Y).

Accounts

- A free **Zoom** host account or a **Google** account for Meet. (Created in Session 1; create in class if needed.)

Internet

- Academy Wi-Fi in class. Have a **mobile-data fallback** ready (a hotspot or a second connection) in case the Wi-Fi fails â€" this is also the troubleshooting lesson.

Alternative for learners who lack a facility

- Any phone with the Zoom or Meet app works. A learner with only a phone can host, share the screen (slides work on a phone), use chat and run a poll. Breakout rooms are easier on a laptop but possible on a phone.

Safety note: Recording a live class requires telling everyone and offering an alternative to those who object. Never record secretly. No learner's personal data, and no images of minors, without written consent. Follow the academy's Ethics rules: collect less, protect more, ask permission, credit the owner, tell the truth.

D. OPENING ACTIVITY (6 minutes)

Instructor setup: Start a mock live class on Zoom or Meet. Admit the learners (or project the screen). Share your screen with a simple slide. Begin talking â€" and keep talking for three full minutes. Do not ask a single question. Do not use the chat. Do not use a poll. Just talk.

After three minutes, stop and ask:

> *"How many of you are still paying attention? Be honest. â€¦ How many of you checked your phone, thought about dinner, or started reading a message? â€¦ That is what I thought. Now â€" what could I have done in those three minutes to keep you with me?"*

Let the class call out ideas. Then reveal:

> *"You just lived the number one mistake in online teaching: **a host who talks and talks and never asks anyone to do something.** In a classroom, you can see the room â€" you notice when eyes glaze. Online, silence is invisible. A learner can be asleep, cooking, or on another app, and you would never know. So you must **design** the moments where they do something â€" a poll, a chat question, a show of hands, a breakout task. Today you learn to design those moments, and you learn to run them as the host."*

Expected learner response: Learners will say "ask us questions," "use a poll," "make it interesting," "shorter." Accept all answers and draw out the rule: **something asked or done at least every eight minutes.**

Why this opener works: It makes the learners *feel* the problem â€" their own attention drift â€" before any theory. They will remember the feeling, and they will remember the fix.

E. PREREQUISITE REVIEW (7 minutes)

Run this as a fast oral round-robin. Put the questions on the projector.

Question 1: "What makes online teaching different from a classroom? Name two things."

- Expected answer: Shorter attention; distraction at home; mobile-first learners; screen fatigue; participation must be designed; data costs.
- Common gap: learners recite the list but cannot apply it. Clarify: "Keep those in mind â€" today you design for them."

Question 2: "What are the five parts of a lesson?"

- Expected answer: Opener, input, practice, check for understanding, exit task.
- Common gap: none serious; accept all reasonable answers.

Question 3: "What did you build in Session 3? Name your artefacts."

- Expected answer: A three-slide deck, a 60â€“90 second recording, a worksheet, a copyright checklist.
- Common gap: some learners did not finish the recording. Clarify: "If your recording is not done, finish it before the micro-teach â€” you will teach with your content today."

Question 4: "What is your primary mode, and what free tools did you choose?"

- Expected answer: Each learner names their mode and tools.
- Common gap: learners who chose live mode but have never hosted. Clarify: "Today you become the host. That is the point."

Bridge to today (say this):

> *"You have the content. Now you run the class. Today you learn the host's toolkit â€” screen share, chat, polls, hand raise, breakout rooms, waiting room, recording. You learn the **engagement rhythm** â€” something every eight minutes. You learn **classroom management** â€” norms, latecomers, disruption. You learn **troubleshooting** â€” a calm checklist for when technology fails. And you deliver a **10-minute micro-teach** â€” your first real online lesson. By the end of today, you will have taught."*

If more than a third of the class cannot name the five parts of a lesson, spend 5 extra minutes writing them on the board with a one-line job for each before continuing.

F. FULL LECTURE NOTES

F.1 The host's toolkit â€” every control and when to use it

The idea. As the host, you are not just a teacher â€” you are the **driver** of the call. You control what everyone sees, hears and does. Here is the toolkit, what each control does, and the mistakes to avoid.

Control	What it does	When to use it	The classic mistake
Mute management	Mute and unmute all or individuals	Mute all at the start; unmute for questions	Forgetting to mute all â€” background noise ruins the class
Screen share	Shows your screen (or a window) to everyone	Share slides, a demo, a worksheet	**Sharing the wrong window** â€” showing your WhatsApp or email
Chat	A text box for questions and answers	Ask a question, let learners type answers	Ignoring the chat â€” learners feel invisible
Polls	A quick vote with instant results	Check understanding; break the ice	A poll with no follow-up â€” ask, then discuss the results
Hand raise	Learners signal they want to speak	Manage turn-taking in a big class	Calling on people who never raise their hand
Whiteboard	A shared blank screen to draw or write	Brainstorm, solve a problem together	Using it with no task â€” a blank board is not a activity
Breakout rooms	Split learners into small groups for a task	Pair or small-group practice	Breakout rooms with no task â€” learners just wait
Waiting room	A holding area before the class starts	Admit learners at the right time; keep latecomers out briefly	Leaving it off â€” latecomers barge in mid-lesson
Recording	Records the call	Catch-up for absent learners	Recording without telling anyone â€” an ethics breach

Screen share â€” the classic mistake: The most common hosting error is sharing the wrong window. You mean to share your slides, but you share your entire screen â€” and the learners see your WhatsApp messages, your email, your browser tabs. The

fix: **share the specific window or application, not the whole screen** â€" and check what is on your screen before you share. Close anything you do not want the class to see.

Breakout rooms â€" the task rule: A breakout room without a task is just a waiting room. Always give a clear task: "In pairs, discuss: what is the first step in taking your measurements? You have three minutes. Come back with one answer." No task, no breakout.

Say this to the class:

> *"The toolkit is not hard â€" but it is easy to use badly. The golden rules: mute all at the start, share the window not the screen, never ignore the chat, always give breakout rooms a task, and always tell people before you record. Master those and you are already a better host than most."*

F.2 Engagement â€" the eight-minute rhythm

The idea. Online attention is short and invisible. If you do not design participation, it will not happen â€" learners will mute, vanish and never come back. The rule: **something asked or done at least every eight minutes.**

Why eight minutes? In a classroom, a teacher can read the room. Online, you cannot. Eight minutes is roughly the attention ceiling for a passive online learner. After eight minutes of listening, the learner's mind is on their phone, their children, their dinner. A well-timed poll or chat question **resets** their attention.

The four types of participation moment:

1. **A poll.** "Quick check: which of these is a measurement â€" bust, fabric, or zip?" Instant, anonymous, everyone can answer.
2. **A chat prompt.** "Type one word in the chat: what is the hardest part of sewing for you?" Low-pressure, everyone can type.
3. **A show of hands.** "Hands up if you have ever sewn anything." Visual, quick, no typing needed.
4. **A breakout pair task.** "In pairs, in breakout rooms, discuss: what is the first step? Three minutes. Come back with one answer." Deeper, but takes longer â€" use sparingly.

Designing the rhythm â€" worked example (a 30-minute lesson):

Time	What happens	Participation moment
0â€"3	Opener: a hook and the outcome	**Poll:** "Have you ever sewn? Yes / No."
3â€"11	Input: a short demo	**Chat prompt:** "Type one word: what do you think of when I say 'measurements'?"
11â€"21	Practice: learners try it	**Show of hands:** "Hands up if you took your bust measurement."
21â€"26	Check: a quick quiz	**Poll:** "Which is the correct way to hold the tape? A, B or C."
26â€"30	Exit task	**Chat:** "Type your waist measurement."

Say: "Something every eight minutes. Five moments in 30 minutes. That is the rhythm. A lesson with one poll at the start and nothing else is not a lesson â€" it is a lecture with a pulse check."

Real-life comparison. Engagement is like **music**. A song with one long note is boring. A song with a rhythm â€" verse, chorus, verse, chorus â€" holds you. Your lesson needs a rhythm too: teach, ask, teach, ask. The "ask" is the chorus. Without it, you are just holding one long note.

Common misconception. "Engagement means being entertaining." No â€" it means being **participatory**. You do not need jokes and games. You need moments where the learner *does* something. A poll is not entertainment; it is a design tool that keeps the learner in the lesson.

F.3 Classroom management â€" norms, latecomers, disruption

The idea. Online classroom management is not about control â€" it is about **clarity and fairness**. When everyone knows the rules, the class runs itself. When nobody does, the host is constantly firefighting.

The three norms to state at the start:

1. **Mute when you are not speaking.** "Please mute yourself when you are not talking â€" it helps everyone hear. Unmute when you want to speak."
2. **How to ask questions.** "To ask a question, raise your hand (the hand icon) or type in the chat. I will check the chat every few minutes."
3. **Respect everyone's turn.** "We listen when others speak. We do not interrupt. Everyone gets a turn."

Why norms matter: In a classroom, norms are implicit â€" everyone grew up in classrooms. Online, nothing is implicit. A learner who does not know they should mute will sit in a noisy room for 30 minutes. A learner who does not know how to ask will stay confused. Norms are not bureaucracy â€" they are **freedom from confusion**.

Managing latecomers â€" the waiting room:

- Turn on the **waiting room** before the class starts.
- Admit everyone at the start time.
- A latecomer arrives in the waiting room. Admit them quietly â€" do not stop the class to explain what they missed.
- If they miss something important, catch them up privately in the chat: "Welcome â€" we are on slide 3, taking measurements."

Handling disruption â€" privately, never publicly:

- If a learner is disruptive (background noise, talking over you, inappropriate chat), handle it **privately**. Send a direct message: "Please mute yourself â€" I can hear background noise." Never call them out in front of everyone.
- If it continues, remove them from the call and follow up privately after. Public confrontation escalates; private correction resolves.
- The rule: **praise publicly, correct privately.** Everyone is learning, and everyone deserves dignity.

Say this to the class:

> *"Online, you cannot see the room â€" so you make the rules visible. Three norms at the start. Latecomers through the waiting room. Disruption handled privately. And everyone gets a turn. That is management. It is not strict â€" it is **kind and clear**."*

F.4 Troubleshooting â€" the calm checklist and the fallback plan

The idea. Technology will fail. A learner's audio will cut out. Your screen share will freeze. The connection will drop. The question is not *if* but *when* â€" and your job is to stay calm and follow a checklist, not panic.

The troubleshooting checklist â€" sound, camera, screen, connection:

Order	Check	What to do
1	**Sound**	Is the learner muted? Is your microphone selected correctly? Ask: "Can you hear me?" â€" if not, check mute and mic settings first.
2	**Camera**	Is the camera on? Is the right camera selected? If the video is black, check the camera toggle.
3	**Screen share**	Is the right window shared? Is the screen frozen? Stop sharing and start again.
4	**Connection**	Is the internet stable? If the call freezes, switch to mobile data, or ask learners to turn off video to save bandwidth.

The fallback plan â€" write it down:

- **If the video freezes:** Turn off your video and continue with audio only.
- **If the audio cuts:** Switch to a phone call (dial in) or move to a fresh link.
- **If the screen share fails:** Send the slides in the chat or by WhatsApp and teach from your phone.
- **If the connection drops:** Send a fresh link by WhatsApp. Restart the call. If it cannot be fixed, reschedule â€" and send a recording of the lesson afterwards.
- **If a learner cannot join:** Send them the slides and a summary by WhatsApp; record the session for them.

The mobile-data fallback: Nigerian Wi-Fi fails. Have a backup: a mobile hotspot, a second SIM, or a plan to switch to audio-only. Tell the class at the start: "If my video freezes, stay with me on audio â€" I will fix it."

Say this to the class:

> *"Troubleshooting is not about being a tech expert. It is about **staying calm and following a list.** Sound first, then camera, then screen, then connection. And always have a fallback â€" a fresh link by WhatsApp, a mobile hotspot, a recording for those who could not stay. The class that can survive a technical failure is the class that works."*

Real-life comparison. Troubleshooting is like **driving in Lagos traffic**. You do not panic when the traffic stops â€" you change route, you take a side street, you stay calm. The destination is the same. Technology failing is not a disaster â€" it is traffic. Have a route around it.

F.5 The 10-minute micro-teach â€" your first real lesson

The idea. Today, each learner delivers a **10-minute micro-teach** â€" a short, live lesson to their classmates, using at least two participation tools. This is not a test â€" it is your first real online lesson, in a safe room.

The structure (10 minutes):

Time	Part	What you do
0â€"1	Opening	Welcome, state the outcome, set one norm
1â€"4	Content	Teach one thing â€" share your screen, show your slides
4â€"7	Interaction	A participation moment â€" a poll, a chat prompt, a show of hands
7â€"9	Practice/check	A second moment â€" learners do something or answer
9â€"10	Closing	A quick check: "What did we learn?" + a preview of next time

What is assessed (by your peers and the instructor):

- You hosted the call (admitted people, managed the room).
- You used **at least two participation tools** (poll, chat, hand raise, breakout, whiteboard).
- You stated at least one norm.
- You handled the technology calmly.
- You kept it to 10 minutes.

Say this to the class:

> *"Ten minutes. Two participation tools. One norm. That is all. Your micro-teach is not about being perfect â€" it is about **being a host**. If you can run a 10-minute class with two moments where learners do something, you can run a course. The rest is practice."*

F.6 Summary of the lecture

- The **host's toolkit**: mute, screen share (the right window, not the screen), chat, polls, hand raise, whiteboard, breakout rooms (with a task), waiting room, recording (with consent).
- **Engagement**: something asked or done at least every eight minutes â€" poll, chat prompt, show of hands, breakout task.
- **Classroom management**: three norms at the start; latecomers through the waiting room; disruption handled privately; everyone gets a turn.
- **Troubleshooting**: sound â†' camera â†' screen â†' connection; a written fallback plan; mobile-data backup; stay calm.
- **The micro-teach**: 10 minutes, two participation tools, one norm, calm technology.

```

G. INSTRUCTOR DEMONSTRATION (15 minutes)

Goal: The instructor hosts a 10-minute mock live class for Ngozi's Q&A, using the full toolkit and the engagement rhythm, narrating each step so learners see *how* a host thinks.

Setup: Host a Zoom or Meet call with the class. Project the host controls. Have Ngozi's three-slide deck ready.

G.1 Step 1 â€” Before the class: the waiting room and the norms (2 minutes)

Say: "Before anyone joins, I turn on the waiting room. I admit everyone at the start time. As they join, I say good morning and ask them to mute."

Demonstrate: Turn on the waiting room. Admit a few learners. State the norms:

> *"Welcome, everyone. Three quick things: please mute yourself when you are not speaking. To ask a question, raise your hand or type in the chat. And we listen when others speak â€” everyone gets a turn."*

G.2 Step 2 â€” The opener and the first participation moment (2 minutes)

Say: "I start with a hook and a poll â€” the first participation moment, in the first two minutes."

Demonstrate: Share the screen with slide 1 (the title and outcome). State the outcome. Launch a poll:

> *"Quick poll: have you ever sewn anything? Yes or no. â€¦ Thank you â€” 8 yes, 4 no. If you answered no, this course is for you. If yes, you will still learn something new."*

G.3 Step 3 â€” The input and the second participation moment (4 minutes)

Say: "Now the teaching â€” a short demo. And I check the chat during it, so learners can ask questions without stopping me."

Demonstrate: Share slide 2 (Bust â€¢ Waist â€¢ Hip). Demonstrate a measurement on camera. Ask a chat prompt:

> *"While I talk, type one word in the chat: what do you find hardest about measuring yourself? â€¦ I can see 'tight,' 'where to stand,' 'reading the tape.' Great â€” those are exactly the things we will fix today."*

G.4 Step 4 â€” The practice and the breakout task (4 minutes)

Say: "Now the practice. I put them in breakout pairs with a clear task â€” no task, no breakout."

Demonstrate: Create breakout rooms (one per pair). Set the task:

> *"You are in pairs. In three minutes, discuss: what is the first step in taking your measurements? Come back with one answer. I will visit each room."*

Say: "I join each room for 30 seconds â€” just to listen and answer questions. Then I bring everyone back."

G.5 Step 5 â€” The check and the closing (3 minutes)

Say: "Back in the main room, I check understanding with a poll, then close."

Demonstrate: Launch a poll: "Which is the correct way to hold the tape? A â€” loose, B â€” snug not tight, C â€” as tight as possible." â†' Results: mostly B. Close:

> *"Well done â€” B is correct. Today you learned to take three measurements. Your exit task: take your three measurements*

tonight and submit the worksheet. Next time: choosing your fabric. Thank you â€" see you on Saturday."

The finished engagement plan (project it):

NGOZI'S ENGAGEMENT PLAN â€" Live Q&A (30 minutes)

Time	What happens	Participation tool	What the learner does
0â€"3	Opener + outcome	Poll	Answers "Have you ever sewn?"
3â€"11	Input: three measurements	Chat prompt	Types one word about the hardest part
11â€"21	Practice: breakout pairs	Breakout rooms	Discusses the first step in pairs
21â€"26	Check: how to hold the tape	Poll	Chooses A, B or C
26â€"30	Exit task	Chat	Types their waist measurement

Norms: *Mute when not speaking; raise hand or chat for questions; everyone gets a turn.* ***Fallback:*** *If video freezes, continue audio-only. If connection drops, send a fresh link by WhatsApp.*

Questions to ask during the demo:

- "Why the waiting room?" (To admit people calmly and keep latecomers from barging in.)
- "Why a poll in the first two minutes?" (To reset attention before it drifts.)
- "Why visit the breakout rooms?" (To answer questions and keep pairs on task.)
- "What would you do if your screen share froze?" (Stop sharing and start again â€" calmly.)

Expected result: Learners see that hosting is a **sequence of small, calm actions** â€" not a performance. They now have a complete model to copy for their micro-teach.

H. GUIDED PRACTICAL EXERCISE (18 minutes)

Objective: With the instructor guiding, each learner practices the host's toolkit in pairs â€" hosting, screen share, chat, a poll and hand raise.

Starting materials: A Zoom or Meet host account, a phone or laptop, a simple slide (or a photo) to share.

Procedure (instructor calls out each step; learners follow in pairs; instructor walks the room):

1. **Pair up.** One person is the host, one is the learner. You will swap.
2. The host starts a call and admits their partner. **Turn on the waiting room** first, then admit.
3. The host **shares the screen** â€" share a specific window (a slide or a photo), not the whole screen. The learner confirms they can see it.
4. The host asks a **chat question**: "Type one word â€" what is your favourite food?" The learner types it. The host reads it aloud.
5. The host launches a **poll** (yes/no or multiple choice). The learner answers. The host shares the results.
6. The learner **raises their hand** (the hand icon). The host calls on them.
7. **Swap roles.** Repeat steps 2â€"6.
8. **Pause and predict:** After swapping, ask your partner: "What felt smooth? What felt awkward?" Write one thing you will do differently in your micro-teach.

Expected result: Every learner has hosted, shared, polled, chatted and used hand raise â€" at least once as host and once as learner.

Points to pause on and predict:

- After step 3: "Who shared their whole screen instead of a window? What could the learners see that they should not?"
- After step 7: "What felt awkward? What will you practise more?"

Troubleshooting while walking the room:

- Host shares the whole screen â†' "Share the window, not the screen. Close your WhatsApp first."
- Host cannot find the poll button â†' "Look for 'Polls' in the meeting controls. If you cannot find it, use the chat instead â€" a chat question works too."
- Host forgets to mute all â†' "Mute all now. Then unmute to speak."
- Hand raise not visible â†' "Check the 'Participants' panel â€" the raised hand appears there."

Completion checklist (learner ticks each):

- ☐ I started a call and admitted my partner through the waiting room
- ☐ I shared a specific window (not the whole screen)
- ☐ I asked a chat question and read the answer
- ☐ I launched a poll and shared the results
- ☐ I used the hand raise and called on my partner
- ☐ I swapped roles and did all of the above as the learner too
- ☐ I noted one thing to improve for my micro-teach

I. INDEPENDENT CLASS EXERCISE (15 minutes)

Task (new task, done alone): Each learner delivers a **10-minute micro-teach** to the class â€" this is the **Simulation â€" S4 Live Delivery Drill** (15% of the final grade) â€" using at least two participation tools, then responding to one injected technical failure.

Scenario. You are the instructor of your own course. You have your content (slides, a worksheet, a recording). Now you teach a 10-minute live lesson to your classmates. They are your learners. You are the host.

Requirements:

1. Host the call (or take a turn in the instructor's call). Admit people, state one norm.
2. Teach one thing from your course â€" share your screen, show your slides.
3. Use **at least two participation tools** â€" a poll, a chat prompt, a show of hands, a breakout task or the whiteboard.
4. Include a closing check for understanding.
5. Keep it to **10 minutes**.
6. **Technical failure:** At some point, the instructor will inject a failure (e.g., "your screen share just froze" or "your audio cut out"). Respond calmly using the troubleshooting checklist.

Time allowance: 15 minutes (including setup and the failure response).

Success criteria:

- Hosted the call and stated a norm.
- Used at least two participation tools.
- Kept it to 10 minutes.
- Responded calmly and correctly to the injected failure.

The three failure cards (instructor chooses one per learner):

1. **"Your screen share just froze."** â†' Correct response: stop sharing, check the connection, restart sharing. Do not panic.
2. **"Your audio cut out â€" learners cannot hear you."** â†' Correct response: check mute, check the microphone, switch to audio-only or a phone call, send a fresh link by WhatsApp if needed.
3. **"Half the class just disappeared â€" the connection dropped."** â†' Correct response: wait, send a fresh link by WhatsApp, restart the call, record the session for those who could not return.

INSTRUCTOR ANSWER KEY (model micro-teach and failure responses â€" do not show learners):

> ***MODEL MICRO-TEACH â€" NGOZI (10 minutes):***
>
> - *0â€"1: Welcome, outcome ("Today you will take three measurements"), one norm ("Mute when not speaking").*
> - *1â€"4: Share slide 2 (Bust â€¢ Waist â€¢ Hip), demonstrate a measurement on camera.*
> - *4â€"7: **Chat prompt:** "Type the hardest part of measuring yourself." Reads answers.*

- *7â€“9: **Poll:** "Which is correct â€“ A loose, B snug not tight, C as tight as possible?" Shares results.*
- *9â€“10: Closing check: "Type your waist measurement in the chat." Previews next lesson.*

MODEL FAILURE RESPONSES:

- *Screen share froze â†' "I will stop sharing and start again â€" one moment." Stop sharing, wait three seconds, restart. Continue calmly.*
- *Audio cut out â†' "I think my audio dropped â€" can you hear me now?" Check mute and mic. If still down, "I will switch to audio only" (turn off video) or "I will send a fresh link" (WhatsApp).*
- *Connection dropped â†' Wait 30 seconds. Send a fresh link by WhatsApp. Restart the call. Record the session for those who could not return.*

Learner marking (out of 10):

- *Hosted and stated a norm (2)*
- *Used at least two participation tools (3)*
- *Kept to 10 minutes (2)*
- *Responded calmly and correctly to the failure (3)*

J. REAL-WORLD CASE STUDY

Situation. *Chinedu* is a coding mentor in Port Harcourt. He teaches Python to six students in a small computer shop. He decided to run his first online class â€" a live Python session on Zoom for 12 students, including some in Lagos. He prepared his slides, tested his internet, and felt ready. The class was a disaster. He talked for 20 minutes straight, then shared his screen â€" but he shared his entire screen, and the learners saw his WhatsApp messages and his email. Nobody answered his questions. Three students left after 30 minutes. At the 40-minute mark, Zoom ended the call â€" he had hit the free-tier limit. He concluded: "Online teaching is a scam."

Relevant facts.

- Chinedu is a good teacher in person â€" his students love his classes.
- He planned a 90-minute live class â€" far too long for online attention and far beyond the 40-minute free Zoom limit.
- He shared his whole screen, not a window â€" a privacy breach and a distraction.
- He used no participation tools â€" no poll, no chat question, no breakout.
- He had no norms, no agenda and no fallback plan.

Decision point. Chinedu wants to run online classes that work. What should he change?

Possible approaches.

1. **Give up â€" online teaching is not for him.** Return to in-person only.
2. **Keep the same format but buy a paid Zoom plan** â€" so the call does not end at 40 minutes.
3. **Redesign the class** â€" shorter sessions, the right screen share, participation tools, norms and a fallback.

Recommended solution. Approach 3. Here is the reasoning:

- **Why not 1?** The problem is not online teaching â€" it is the design. Giving up wastes the reach and flexibility he wanted.
- **Why not 2?** A paid plan solves the 40-minute limit but nothing else. He would still share the wrong screen, still talk for 20 minutes straight, still lose students. Paying cannot fix design.
- **Why 3?** Every problem has a free fix.

The redesign (what Chinedu changed):

- **Length:** Split the 90-minute class into two 30-minute sessions â€" inside the 40-minute Zoom limit.
- **Screen share:** Share the **window** (his code editor), not the screen. Close WhatsApp and email before sharing.
- **Engagement rhythm:** A poll in the first two minutes, a chat question during the input, a breakout pair task during practice, a poll for the check. Something every eight minutes.
- **Norms:** Stated at the start â€" mute when not speaking, raise hand or chat for questions, everyone gets a turn.
- **Fallback plan:** Written down â€" if video freezes, continue audio-only; if the connection drops, send a fresh link by WhatsApp; record each session for absent students.

- **Cohort:** A 6-week Python course â€" the group starts and finishes together, with a live class every Saturday and a short recorded lesson during the week.

The result (after four weeks): Attendance rose to 11 of 12. A student in Lagos said: "Your classes are the only ones where I actually do something." Chinedu had not changed his teaching â€" he had changed its **design**. And he paid â‚¦0 for software.

Trade-offs.

- The redesign took Chinedu one evening â€" writing the engagement plan, practising the screen share, setting up the fallback.
- The first redesigned class was imperfect. The second was better. By the fourth, it was good.
- He learned that hosting is a skill â€" and like all skills, it improves with practice.

Professional connection. This is the pattern behind every well-run online class: **short sessions, the right screen share, a participation rhythm, clear norms and a calm fallback.** Master this and you can teach almost anything online. Blame the technology and you will conclude â€" wrongly â€" that "online teaching is a scam."

K. COMMON MISTAKES AND TROUBLESHOOTING

Use this table as the live guide. Point learners to the row rather than giving the answer.

K.1 Sharing the wrong window (or the whole screen)

Symptoms: Learners see your WhatsApp, email or browser tabs; private information is exposed. **Likely cause:** You shared the entire screen instead of the specific window â€" or you did not close personal apps first. **How to investigate:** Before sharing, ask: "What is on my screen right now?" If the answer is anything private, stop. **Corrective steps:** Share the **window** (the application), not the screen. Close WhatsApp, email and personal tabs before sharing. Test with a colleague before the real class. **How to confirm resolved:** A learner confirms they see only the intended window. **Prevention:** Make "share the window, close WhatsApp" a habit before every class.

K.2 Talking for 20 minutes with no participation

Symptoms: Learners mute and vanish; nobody answers questions; attendance drops. **Likely cause:** You did not design participation moments â€" you lectured. **How to investigate:** Look at your engagement plan â€" how many participation moments are there? If fewer than three in 30 minutes, the design is too passive. **Corrective steps:** Add a poll in the first two minutes, a chat question during the input, a show of hands or breakout during practice, a poll for the check. **How to confirm resolved:** Something is asked or done at least every eight minutes. **Prevention:** Plan the rhythm before the class â€" never improvise engagement.

K.3 No norms at the start

Symptoms: Background noise, interruptions, learners unsure how to ask questions. **Likely cause:** You assumed everyone knew the rules. **How to investigate:** Ask: "What are the norms?" If you cannot state them, they were not set. **Corrective steps:** State three norms at the start of every class â€" mute when not speaking, how to ask questions, everyone gets a turn. **How to confirm resolved:** Learners follow the norms without being reminded. **Prevention:** Norms are non-negotiable â€" state them every time.

K.4 Latecomers barging in mid-lesson

Symptoms: The class stops to admit and brief latecomers; the flow is lost. **Likely cause:** The waiting room was off, or you stopped the class to explain what they missed. **How to investigate:** Is the waiting room on? Are you stopping the class for latecomers? **Corrective steps:** Turn on the waiting room. Admit latecomers quietly. Catch them up privately in the chat, not in front of everyone. **How to confirm resolved:** Latecomers are admitted without stopping the class. **Prevention:** Waiting room on, every class, every time.

K.5 Breakout rooms with no task

Symptoms: Learners enter breakout rooms and sit in silence, or chat about other things. **Likely cause:** You sent them to breakout rooms without a clear task. **How to investigate:** What was the task? If there was none, the breakout failed. **Corrective steps:** Always give a clear, timed task: "In pairs, discuss X. Three minutes. Come back with one answer." Visit the rooms to keep them on task. **How to confirm resolved:** Learners return with an answer. **Prevention:** No task, no breakout.

K.6 Panicking at a technical failure

Symptoms: The host freezes, apologises repeatedly, or abandons the class. **Likely cause:** No fallback plan â€” the host does not know what to do when technology fails. **How to investigate:** Ask: "What is your fallback if the video freezes?" If they cannot answer, they are unprepared. **Corrective steps:** Teach the checklist â€” sound, camera, screen, connection. Teach the fallback plan: continue audio-only, send a fresh link by WhatsApp, record for absent students. **How to confirm resolved:** The host responds calmly and follows the checklist. **Prevention:** Write the fallback plan down and rehearse it once.

K.7 Recording without telling anyone

Symptoms: Learners discover they were recorded and feel betrayed; trust is broken. **Likely cause:** The host recorded the class without warning or consent. **How to investigate:** Did you tell everyone the class would be recorded? Did you offer an alternative? **Corrective steps:** Always announce recording at the start: "I am recording this session for those who could not attend â€” please tell me if you prefer not to be on camera." Offer an alternative (audio only, or a summary). **How to confirm resolved:** Everyone knows and has consented or opted out. **Prevention:** Recording without consent is an ethics breach â€” never do it.

K.8 Ignoring the chat

Symptoms: Learners type questions and get no response; they feel invisible. **Likely cause:** The host is focused on teaching and forgets the chat. **How to investigate:** After the class, are there unanswered questions in the chat? **Corrective steps:** Check the chat every few minutes. Ask a chat partner to monitor it if the class is large. Answer questions aloud or in the chat. **How to confirm resolved:** Every chat question is acknowledged. **Prevention:** Build "check the chat" into your engagement plan.

Distinguish likely vs confirmed: A "likely cause" becomes "confirmed" only after you check it â€” for example, the learner can actually show an engagement plan with fewer than three participation moments, or actually describe their fallback plan. Teach learners to confirm before concluding.

L. SESSION ASSIGNMENT

Assignment title: "My Live + Engagement Plan and Micro-Teach"

Purpose: To practise hosting a live class with real participation â€” the delivery skill behind the capstone â€” and to build the capstone's engagement plan.

Realistic scenario. You are the instructor of your own course. You have your content from Session 3. Now you plan and deliver a live session: an engagement plan with a participation rhythm, a fallback plan, and a 10-minute micro-teach delivered live (or recorded) to your classmates. This becomes the engagement plan section of your capstone in Session 6.

Detailed instructions:

1. Write a **live + engagement plan** for a 30-minute session: what happens in each block, the participation tool used, and what the learner does. Include something every eight minutes.
2. Write **three classroom norms** and where you will state them.
3. Write a **fallback plan**: what you will do if (a) the video freezes, (b) the audio cuts, (c) the connection drops.
4. Deliver a **10-minute micro-teach** â€” live in class or recorded â€” using at least two participation tools, with a closing check for understanding.
5. Write **one paragraph** (5â€“7 sentences) reflecting: "What went well in your micro-teach? What will you do differently next time?"

Required deliverables:

- A live + engagement plan (30 minutes, participation rhythm).
- Three classroom norms.
- A fallback plan (three scenarios).
- A 10-minute micro-teach (live or recorded).
- One reflection paragraph.

Submission format: Save as `A4_YourName.docx` (or `.pdf` or a folder) and upload to `/Online-Teaching/Week2/A4/`. Include a link to your recorded micro-teach if you recorded it (unlisted).

Deadline: Before Session 6 (Assignment 4 is completed across Sessions 4 and 5 â€" the assessment and support pack is due before Session 6).

Marking rubric (10 marks):

Criterion	Marks	Description of a strong answer
Engagement plan with rhythm	3	Something every eight minutes; participation tools matched to moments
Three norms stated	2	Clear, practical, stated at the start
Fallback plan	2	Three scenarios with calm, correct responses
Micro-teach delivered	2	10 minutes, two participation tools, closing check
Reflection paragraph	1	Honest, specific, identifies one improvement

Common mistakes to avoid: no participation rhythm; no norms; no fallback plan; talking the whole time; sharing the wrong screen; recording without consent; ignoring the chat.

INSTRUCTOR REFERENCE SOLUTION (do not show learners):

> ***Engagement plan â€" Ngozi's live Q&A (30 minutes):*** *As in Section G. Poll at 0â€"3, chat prompt at 3â€"11, breakout pairs at 11â€"21, poll at 21â€"26, chat exit task at 26â€"30.*
>
> ***Three norms:*** *(1) Mute when not speaking. (2) Raise your hand or type in the chat to ask a question. (3) Everyone gets a turn â€" we listen when others speak.*
>
> ***Fallback plan:*** *(a) Video freezes â†' continue audio-only, turn off video to save bandwidth. (b) Audio cuts â†' check mute and mic; if still down, switch to a phone call or send a fresh link by WhatsApp. (c) Connection drops â†' wait 30 seconds, send a fresh link by WhatsApp, restart the call, record the session for those who could not return.*
>
> ***Micro-teach:*** *10 minutes â€" as in the Section I answer key. Two participation tools (chat prompt + poll), one norm, closing check.*
>
> ***Reflection paragraph (model):*** *"What went well: the chat prompt worked â€" learners typed real answers and I could respond to them. What I will do differently: I will state the norms more clearly at the start, and I will practise the screen share before the class so I do not fumble with it. Next time I will also add a breakout task â€" I ran out of time."*

M. KNOWLEDGE CHECK

(Learner version â€" answers only in the Instructor Key below.)

Q1. Short answer. What is the engagement rhythm rule, and why does it matter online?

Q2. Multiple choice. What is the classic screen-share mistake? a) Sharing a poll instead of a slide. b) Sharing the whole screen instead of the specific window â€" and exposing private apps. c) Sharing the chat instead of the screen. d) Sharing the whiteboard instead of the slides.

Q3. Explain. Why should disruption be handled privately, not publicly?

Q4. Practical. A learner joins your class 10 minutes late. What do you do â€" and what do you NOT do?

Q5. Matching. Match each participation tool to its best use: **poll, chat prompt, show of hands, breakout rooms.** a) A quick anonymous check of understanding. b) A small-group discussion with a task. c) A low-pressure way for everyone to share a thought. d) A fast visual check of who has done something.

Q6. Scenario. Your screen share freezes in the middle of your lesson. Describe, step by step, what you do.

INSTRUCTOR ANSWER KEY (Q1â€"Q6)

A1. The rule: something asked or done at least every eight minutes. It matters because online attention is short and invisible â€" learners can mute and vanish without you knowing. A participation moment resets their attention and keeps them in the lesson.

A2. (b) Sharing the whole screen instead of the specific window â€" and exposing private apps. (The fix: share the window, close personal apps first.)

A3. Because public confrontation embarrasses the learner and escalates the situation; private correction resolves it while preserving the learner's dignity. The rule: praise publicly, correct privately.

A4. You admit them quietly through the waiting room without stopping the class, and you catch them up privately in the chat. You do NOT stop the whole class to explain what they missed, and you do NOT scold them in front of everyone.

A5. poll = (a); breakout rooms = (b); chat prompt = (c); show of hands = (d).

A6. Step by step: (1) Stay calm â€" do not panic or apologise repeatedly. (2) Say "I will restart my screen share â€" one moment." (3) Stop sharing. (4) Wait a few seconds. (5) Start sharing again â€" the correct window this time. (6) Continue the lesson. If it freezes again, turn off video to save bandwidth and teach audio-only. (Accept any calm, correct sequence.)

N. REFLECTION AND RECAP

Plain-English summary. Today you learned to run a live class. You learned the **host's toolkit** â€" mute management, screen share (the right window, not the whole screen), chat, polls, hand raise, whiteboard, breakout rooms (with a task), waiting room and recording (with consent). You learned the **engagement rhythm** â€" something asked or done at least every eight minutes, because online attention is short and invisible. You learned **classroom management** â€" three norms at the start, latecomers through the waiting room, disruption handled privately, everyone gets a turn. You learned **troubleshooting** â€" the checklist (sound â†' camera â†' screen â†' connection) and a written fallback plan, because technology will fail and calm is a skill. And you delivered a **10-minute micro-teach** â€" your first real online lesson.

Five important takeaways:

1. **Host the room:** mute all, share the window, check the chat, state the norms.
2. **Engage every eight minutes:** a poll, a chat prompt, a show of hands or a breakout task â€" something every learner does.
3. **Manage with clarity:** three norms, waiting room for latecomers, private correction for disruption.
4. **Troubleshoot calmly:** sound â†' camera â†' screen â†' connection; a written fallback plan; mobile-data backup.
5. **Silence is a design failure:** if nobody is answering, the problem is almost always the design, not the learners.

Questions to help you recognise what you can now do:

- Can I host a call and use the waiting room?
- Can I share a specific window without exposing my screen?
- Can I design an engagement plan with something every eight minutes?
- Can I state three norms and manage latecomers calmly?
- Can I respond correctly to a frozen screen share?
- Can I explain why silence online is a design failure?

Connection to the next session. You can now run a live class â€" but running a class is not the same as knowing if anyone learned. Next session â€" **Assessment, Feedback and Learner Support** â€" you will build a **quiz in Google Forms** with auto-grading, set up an **assignment in Google Classroom** and mark it with a **simple rubric**, write **feedback that helps** (specific, kind, with a next step), and learn how to **support learners** who go quiet. You will also take the **ethics check** â€" minimum data, safe storage, consent, and special care with minors. Bring your engagement plan; you will build the assessment around it.

O. INSTRUCTOR EVALUATION NOTES

Observable signs of genuine competence:

- Learner hosts the call, admits through the waiting room and states a norm without being prompted.
- Learner's engagement plan has something every eight minutes â€" and they actually use the tools in the micro-teach.
- Learner shares the correct window, not the whole screen.
- Learner checks the chat and responds to questions.
- Learner responds to the injected failure calmly and correctly.
- Learner keeps the micro-teach to 10 minutes.

Common misconceptions to watch for and correct:

- "Engagement means being entertaining." â†' It means being participatory â€" moments where learners do something.
- "I will buy a paid Zoom plan and that fixes everything." â†' Paying cannot fix design; the problems are length, screen share, participation and norms.
- "The waiting room is unnecessary." â†' It is how you admit people calmly and manage latecomers.
- "Breakout rooms are for discussion." â†' They are for a *task* â€" no task, no breakout.
- "Technology failing is a disaster." â†' It is traffic; have a route around it.
- "Recording is automatic." â†' Recording requires telling everyone and offering an alternative.

Suggested remedial exercises for learners who struggle:

1. **Tool drill:** give a list of five hosting actions (mute all, share a window, launch a poll, check the chat, admit from the waiting room); the learner performs each one and explains when to use it.
2. **Engagement plan fill-in:** give a 30-minute lesson plan with the participation moments missing; the learner adds them.
3. **Failure rehearsal:** inject a failure (e.g., "your audio just cut out") and watch the learner respond â€" calmly and correctly, or with panic to coach.

Differentiation:

- **Level 1 (supported):** provide an engagement plan already structured; the learner adds the participation tools and delivers a 5-minute micro-teach with one tool.
- **Level 2 (standard):** the session as written â€" full engagement plan and a 10-minute micro-teach with two tools.
- **Level 3 (challenge):** ask the learner to design an engagement plan for a **large** class (30+ learners) and explain how it differs from a small class â€" what tools work at scale, and what breaks.

Capstone links. The engagement plan and micro-teach completed today become the **engagement plan and delivery skill** behind the capstone in Session 6. A learner who hosts well today has the delivery skill the capstone assesses. Remind learners to keep every artefact in their working folder (`CEA-OT-FirstnameLastname`).

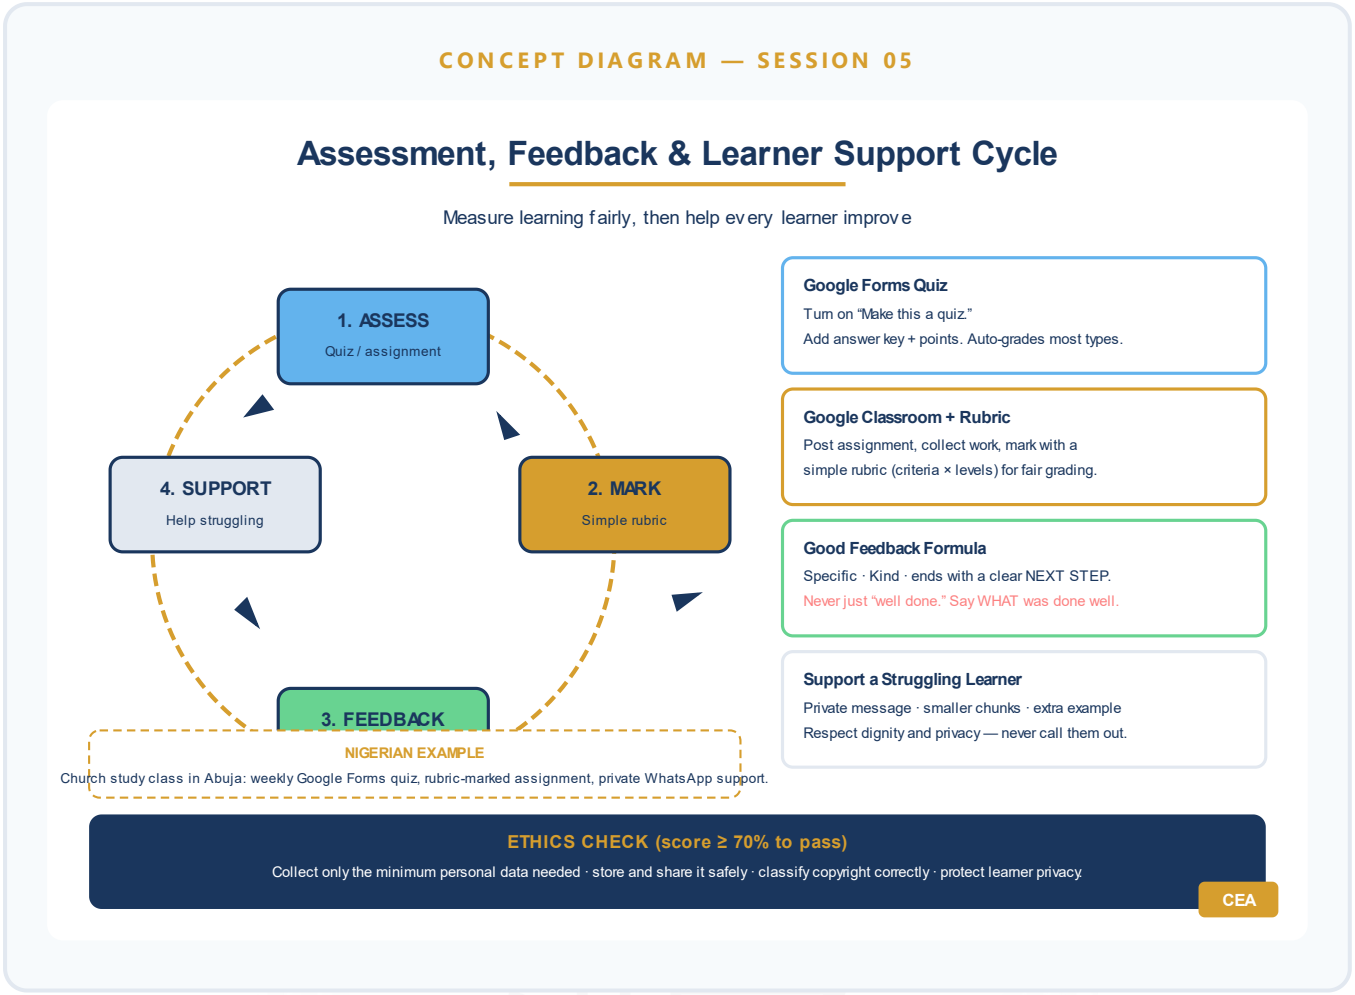

Timing guidance. The priority is **learners hosting and delivering their micro-teach** (Sections H and I). If the room is slow, shorten the classroom-management lecture (F.3) to a 5-minute summary and protect the micro-teach time. A learner who leaves without having hosted has not met LO5.

END OF SESSION 4

Next: Session 5 â€" Assessment, Feedback and Learner Support.

SESSION 05 OF 6

Assessment Feedback and Learner Support

CYBER ELIAS ACADEMY â€" ONLINE TEACHING

SESSION 5 â€" ASSESSMENT, FEEDBACK AND LEARNER SUPPORT

A. SESSION IDENTIFICATION

Item	Detail
Session number	5 of 6
Session title	Assessment, Feedback and Learner Support
Week / Module	Week 2 â€" Module 2: Deliver and Grow
Recommended duration	105 minutes
Difficulty level	Beginner (assessment design and feedback writing â€" no prior assessment experience required)

Item	Detail
Prerequisite knowledge	Session 4 completed (or the ability to host a live class). A course idea with outcomes and at least one lesson. A free Google account (for Forms and Classroom). No prior quiz-design or grading experience required.
Connection to previous work	In Session 4 you ran a live class. Today you prove that learning happened: you build a quiz, set up an assignment, mark with a rubric, write feedback that helps, and support learners who struggle. You also take the ethics check.
Preparation before class	Confirm every learner can access Google Forms and Google Classroom. Prepare a projector with a sample quiz (Section G) and a sample rubric. Print the feedback sentence frames (Section F.5), the rubric template (Section F.4) and the ethics check questions (Section F.8). Have two struggling-learner scenarios ready (Section I). Read the Course Design Document Sections 5 (LO6, LO7) and 15 before class.

Instructor note on tone: This session has two halves. The first half (quiz, assignment, rubric, feedback) is practical and concrete â€" learners build real artefacts. The second half (support, community, ethics) is about care and judgment â€" learners make decisions about real people. Keep the first half brisk and hands-on; slow down for the second half, where the ethics check and the support scenarios need thought and discussion. The message: assessment is not a weapon â€" it is a mirror that helps the learner see their progress.

B. LEARNING OUTCOMES

By the end of this session, the learner will be able to:

1. **Build an auto-graded quiz in Google Forms** with an answer key, matching question types to outcomes.
2. **Set up an assignment in Google Classroom** and mark it with a **simple rubric** so grading is fair and quick.
3. **Write feedback** that is specific, kind and ends in a clear next step â€" never just "well done."
4. **Choose an appropriate support step** for two struggling-learner scenarios, respecting dignity and privacy.
5. **Pass the ethics check** (at least 70%): state the minimum personal data a course needs, how to store and share it safely, and classify copyright scenarios correctly.

C. REQUIRED MATERIALS

Hardware

- One smartphone per learner (with a browser) or an academy laptop. Either is enough.
- Instructor device connected to a projector or large screen.

Software (all free)

- **Google Forms** â€" for the auto-graded quiz.
- **Google Classroom** â€" for the assignment and submissions.
- **Google Docs** â€" for the rubric, feedback and support plan.
- **Canva** (free) â€" for the certificate (optional, honest wording).

Sample files

- **Sample quiz** (Section G) â€" a 5-question quiz with an answer key, projected.
- **Sample rubric** (Section F.4) â€" a simple 4-criterion table, printed.
- **Feedback sentence frames** (Section F.5) â€" printed.
- **Two struggling-learner scenarios** (Section I) â€" printed or projected.
- **Ethics check questions** (Section F.8) â€" printed.

Worksheets

- Worksheet 5.1 â€" "My Quiz Plan" (outcome / question type / question / answer).

- Worksheet 5.2 â€" "My Rubric" (criterion / 3 levels / marks).
- Worksheet 5.3 â€" "Feedback Frames" (specific / kind / next step).

Accounts

- A free **Google** account (opens Forms, Classroom, Docs). Created in Session 1; create in class if needed.

Internet

- Academy Wi-Fi in class for Google tools. The lesson works offline for planning and writing feedback; the quiz build needs internet.

Alternative for learners who lack a facility

- Any phone with a browser works. Google Forms and Classroom work in a phone browser. A learner who cannot type quickly may dictate feedback to a classmate.

Safety note: Assessment involves real learner data â€" names, scores, submissions. Follow the ethics rules: collect the minimum, store it carefully, never publish numbers or results, and give feedback to the individual, not the group. No learner's personal data, and no images of minors, without written consent.

D. OPENING ACTIVITY (6 minutes)

Instructor setup: Project two pieces of feedback on the screen. Do not label them yet.

> ***Feedback A:*** *"Good job. Well done. Keep it up."*
>
> ***Feedback B:*** *"Your introduction is clear and your measurements are accurate. Next, add one worked example of how you calculated the waist measurement â€" that will make it easier for a beginner to follow."*

What the instructor says:

> *"Good morning. On the screen are two pieces of feedback a teacher might give a learner. Read them both. Now â€" which one helps the learner more? â€¦ The second one, obviously. Why?"*

Let the class call out differences. Then reveal:

> *"Feedback A is polite but useless â€" it tells the learner nothing about what they did well or what to do next. Feedback B is **specific** (it names what was good), **kind** (it is encouraging, not harsh) and it ends in a **clear next step** (add one worked example). That is the difference between feedback that makes a learner feel good and feedback that makes a learner better. Today you learn to write feedback that does both."*

Then ask the second question:

> *"Now â€" how do you know if a learner actually learned? Raise your hand if you have ever taught something, then wondered later: 'Did they get it?' â€¦ That wonder is the problem assessment solves. A quiz, an assignment, a rubric â€" these are not punishments. They are **mirrors** that show the learner â€" and you â€" what was learned and what was not. Today you learn to build those mirrors."*

Expected learner response: Learners will say feedback B "tells you what to do," "it is specific," "it is helpful." Accept all answers and draw out the three parts: specific, kind, next step. For the second question, they will nod â€" everyone has wondered "did they get it?"

Why this opener works: It uses a contrast learners can feel (useless vs useful feedback) and a universal experience (wondering if they learned) to frame the whole session: assessment and feedback are tools for the learner's benefit, not the teacher's power.

E. PREREQUISITE REVIEW (7 minutes)

Run this as a fast oral round-robin. Put the questions on the projector.

Question 1: "What is a learning outcome? Give one example from your own course."

- Expected answer: A sentence saying what the learner will be able to do â€" e.g., "Take three body measurements and record them accurately."
- Common gap: vague verbs. Clarify: "Check your outcome â€" action verb? If it says 'understand,' rewrite it."

Question 2: "What participation tools did you use in your micro-teach?"

- Expected answer: A poll, a chat prompt, a show of hands, a breakout task, the whiteboard.
- Common gap: some learners used only one tool. Clarify: "Today's quiz is another participation tool â€" but this one *marks* the learning."

Question 3: "What is a rubric? Have you ever used one?"

- Expected answer: A table that says what good work looks like, with levels and marks.
- Common gap: many learners have never seen a rubric. Clarify: "A rubric is a scoring guide â€" it makes grading fair and fast. You will build one today."

Question 4: "What is the difference between a quiz and an assignment?"

- Expected answer: A quiz is a quick check (often auto-graded); an assignment is a larger task the learner produces and submits.
- Common gap: some learners think they are the same. Clarify: "A quiz checks knowledge quickly; an assignment checks a bigger piece of work. You build both today."

Bridge to today (say this):

> *"You taught a class. Now you prove the learning. A quiz checks knowledge fast. An assignment checks a bigger task. A rubric makes your marking fair. Feedback tells the learner what to do next. And support catches the learner who is falling behind â€" before they disappear. Today you build all of it, and you take the ethics check that keeps it all honest."*

If more than a third of the class cannot name a learning outcome, spend 5 extra minutes writing one outcome on the board together before continuing.

F. FULL LECTURE NOTES

F.1 Why assessment matters online

The idea. In a classroom, you can see if learners are confused â€" you read their faces. Online, you cannot. Assessment is how you **see** the learning: a quiz, an assignment, a rubric. Without it, you are teaching into the dark.

Why it matters: For the learner, assessment shows them what they know and what they do not â€" a mirror, not a weapon. For you, it shows what worked and what did not â€" so you can fix your teaching. For the course, it is the evidence that the course works.

The two kinds of assessment:

Kind	What it is	When to use it	Example
Quiz	A quick check of knowledge â€" often auto-graded.	At the end of a lesson or module.	"Five questions on body measurements."
Assignment	A larger task the learner produces and submits.	At the end of a module or course.	"Sew a skirt and photograph it."

Say this to the class:

*"Assessment is not about catching learners out. It is about **catching learning** â€" seeing it, naming it, and helping it grow. A quiz is a quick mirror. An assignment is a longer mirror. A rubric is the frame that makes the mirror fair."*

F.2 Quiz design in Google Forms â€" question types and auto-grading

The idea. Google Forms lets you build a quiz that **marks itself** â€" you write the questions and the answers, and the tool grades every submission instantly. Your job is to match the question type to the outcome and write a clear answer key.

The question types and when to use them:

Question type	What it does	Best for	Example
Multiple choice	One correct answer from options.	Checking facts, definitions, steps.	"Which is a body measurement? a) Bust b) Fabric c) Zip"
Checkboxes	Multiple correct answers.	"Select all that apply."	"Select all the tools you need: a) Tape b) Scissors c) Hammer"
Short answer	A typed answer you set as correct.	A specific word or number.	"What is the first measurement you take? (Answer: Bust)"
Dropdown	A list to choose from.	A clean set of options.	"Choose the correct step: 1, 2 or 3."
Linear scale	A scale from 1 to 5 (or 1 to 10).	Self-assessment, confidence.	"How confident are you with measurements? 1â€"5."
Paragraph	A longer typed answer.	Reflection, explanation.	"Explain in one sentence how to take a waist measurement."

The rule: match the question type to the outcome. If the outcome is "identify three fabrics," use multiple choice or checkboxes. If it is "explain how to measure," use a paragraph. If it is "rate your confidence," use a linear scale. Do not use a multiple-choice question for an outcome that needs an explanation.

Auto-grading â€" how it works:

1. In Google Forms, turn on **"Make this a quiz"** in the settings.
2. For each question, write the correct answer and assign points.
3. For multiple choice, checkboxes, dropdown and short answer, the tool marks automatically.
4. For paragraph answers, you mark manually.
5. When a learner submits, they see their score instantly â€" and you see every response in a spreadsheet.

The answer key: For every question, write the correct answer and, for short answers, the acceptable alternatives. "Bust" and "bust" should both be marked correct.

Worked example â€" Ngozi's 5-question quiz for "Taking three body measurements":

#	Outcome	Question type	Question	Answer
1	Take 3 measurements	Multiple choice	Which of these is a body measurement? a) Bust b) Fabric c) Zip	a) Bust
2	Take 3 measurements	Checkboxes	Select all the tools you need: a) Tape measure b) Scissors c) Hammer	a) Tape measure
3	Record accurately	Short answer	What is the first measurement you take?	Bust
4	Record accurately	Linear scale	How confident are you with measuring? 1â€"5	(self-assessment)
5	Record accurately	Paragraph	In one sentence, how do you take a waist measurement?	(manual mark)

Say this to the class:

> *"Five questions. Each one maps to an outcome. Four are auto-graded; one is manual. A learner submits and sees their score in seconds. You see every answer in a spreadsheet. That is the power of Google Forms â€" it marks the easy questions so you can spend your time on the hard ones."*

Common misconception. "A quiz must be all multiple choice." No â€" match the type to the outcome. A quiz of all multiple choice can only test facts, not skills or explanations.

F.3 Assignments in Google Classroom and the simple rubric

The idea. An assignment is a larger task the learner produces and submits â€" a worksheet, a photo, a short essay, a project. Google Classroom is where you post it, learners submit it, and you mark it. A **rubric** is the scoring guide that makes your marking fair and fast.

Setting up an assignment in Google Classroom (the steps):

1. Open Google Classroom and go to your class.
2. Click **"Classwork" â†' "Create" â†' "Assignment."**
3. Write the title and instructions: "Submit your completed measurement chart."
4. Attach the worksheet (a Google Doc) â€" learners get their own copy.
5. Set a due date and a points value (e.g., 10 points).
6. Add a rubric (optional but recommended â€" see below).
7. Click **"Assign."** Learners see it, complete it and submit.

The simple rubric â€" what it is and why it matters: A rubric is a table with **criteria** (what you are marking) and **levels** (how well they did). It makes grading fair (everyone is marked against the same standard) and fast (you tick boxes instead of writing long comments for every learner).

Worked example â€" Ngozi's rubric for the measurement chart (6 marks):

Criterion	Excellent (2)	Good (1)	Needs work (0)
All three measurements taken	Bust, waist and hip all present	Two present	One or none present
Measurements recorded accurately	All in the right range and unit	Mostly accurate	Several errors
Chart completed and submitted	Complete, legible, on time	Complete but late or messy	Incomplete
Total	**/6**		

Say: "Four criteria. Three levels each. A learner can score 0, 1 or 2 on each â€" total out of 6. When you mark, you tick the level for each criterion and add the marks. It takes 30 seconds per learner. And the learner sees exactly why they got their mark â€" no mystery, no argument."

Why rubrics beat a single grade: A single grade ("7/10") tells the learner nothing. A rubric tells them *what* was good and *what* to improve. It is feedback built into the marking.

F.4 Feedback that helps â€" specific, kind, with a next step

The idea. Feedback is the most powerful tool in teaching â€" and the most misused. "Well done" feels nice but changes nothing. Good feedback is **specific** (names what was good or what is wrong), **kind** (encouraging, not harsh) and ends in a **clear next step** (what to do next).

The three parts of good feedback:

Part	What it does	Weak	Strong
Specific	Names the exact thing	"Good job."	"Your introduction is clear and your measurements are accurate."
Kind	Encourages, does not shame	"This is wrong."	"You are close â€" let's fix one thing."

Part	What it does	Weak	Strong
Next step	Tells them what to do next	"Keep it up."	"Next, add one worked example of the waist calculation."

The feedback sentence frames (use these):

- "You did [specific thing] well â€" I noticed [detail]."
- "One thing to improve: [specific issue]."
- "Your next step is: [clear action]."
- "Compare your work to the rubric â€" you are strong in [criterion] and developing in [criterion]."

Worked example â€" weak vs strong feedback:

> ***Weak:*** *"Good effort. Well done."*
>
> ***Strong:*** *"Your measurement chart is complete and your bust measurement is accurate â€" well done. One thing to improve: your waist measurement is 5cm smaller than your bust, which is unusual â€" please re-measure and check you are wrapping the tape snug, not tight. Your next step: re-measure your waist and resubmit the chart by Friday."*

Why the strong version works: It names what is good (complete, bust accurate), names the specific issue (waist 5cm smaller), explains the likely cause (tape too tight) and gives a clear next step (re-measure and resubmit by Friday). The learner knows exactly what to do.

The rule: feedback goes to the individual, not the group.

Say this to the class:

> *"Feedback is a gift, not a verdict. A gift says: 'Here is what I see, here is what is good, and here is what to do next.' A verdict says: 'You failed.' One helps the learner grow. The other makes them hide. Always choose the gift."*

F.5 Certificates â€" nice, but honest

The idea. A certificate is a nice way to celebrate completion â€" but its wording must be **honest**. A certificate that says "Qualified Online Teacher" when the learner completed a two-week beginner course is a lie, and lies destroy trust.

The honest certificate wording:

- **Say:** "Completed a 6-session online teaching course at Cyber Elias Academy, covering course design, content creation, live delivery and assessment."
- **Do NOT say:** "Certified Online Teacher," "Qualified Instructor," "Accredited Educator" â€" these imply a formal qualification this course does not provide.

Canva certificate (free): Canva has free certificate templates. Use one, add the learner's name, the course title and the honest wording. It takes five minutes and feels like a real achievement â€" because it is.

Say this to the class:

> *"A certificate is a celebration, not a credential. Celebrate what the learner actually did â€" and say exactly that. An honest certificate is worth more than a fancy lie."*

F.6 Supporting struggling learners â€" spot them, reach them, keep their dignity

The idea. Online, struggling learners do not raise their hand â€" they go quiet. They stop submitting, stop attending, stop replying. Your job is to spot them early and reach out â€" privately, kindly, with a concrete step.

How to spot a struggling learner: They miss two sessions in a row. They stop submitting assignments. They go quiet in the chat. Their quiz scores drop.

The support steps (in order):

1. **A private message.** "Hello [name] â€" I noticed you missed the last session. Is everything okay? I am here if you need help." (Private, kind, no pressure.)
2. **Extra time.** Offer an extension â€" no penalty, no shame.
3. **An alternative task.** Offer a simpler version that still meets the outcome.
4. **A catch-up path.** Send the recording, the slides and a short summary â€" so they can catch up without humiliation.
5. **A referral.** If the problem is beyond your skill, refer them to someone who can help.

The dignity rule: Support is private. Never announce in the group: "Some of you are behind." Never compare learners. Support is a hand up, not a spotlight.

Worked example â€" two scenarios:

> ***Scenario 1:*** *Adaeze missed two live sessions and has not submitted the measurement chart. You message her privately: "Hello Adaeze â€" I missed you at the last two sessions. Is everything okay? If the chart is tricky, I can send you a 5-minute recording of me doing it. No pressure â€" just let me know how I can help." She replies: her phone broke and she could not afford data. You offer: an extension, a downloadable recording, and a catch-up call on WhatsApp audio (cheaper than video).*
>
> ***Scenario 2:*** *Ibrahim submitted the chart but his measurements are all wrong. You message him privately: "Thank you for submitting your chart, Ibrahim. I can see you tried hard. One thing to fix: your waist measurement is very tight â€" the tape should be snug, not tight. Please re-measure and resubmit by Friday. Here is a 1-minute clip showing the right tension. You can do this." He resubmits â€" correct.*

Say this to the class:

> *"Support is not about lowering standards â€" it is about **removing barriers**. The standard stays the same; the path to it gets clearer. And it is always private."*

F.7 The learner community â€" a small, moderated group with norms

The idea. A course is more than lessons â€" it is a **community**. A small, moderated group (WhatsApp or Telegram) where learners ask questions, share progress and support each other. But a community without norms becomes a chaos of spam and distraction.

The community norms (set them at the start):

1. **Purpose:** This group is for course questions and support â€" not for politics, spam or arguments.
2. **Respect:** We are kind. We do not mock questions â€" there are no silly questions.
3. **Privacy:** We do not share anyone's personal information, scores or work outside the group.
4. **Response time:** The instructor replies within 24 hours; learners help each other sooner.
5. **No spam:** No forwarded messages, no "good morning" images, no chain posts.

The moderation rule: As the instructor, you are the moderator. You welcome new members, answer questions, gently enforce the norms, and remove spam. A well-moderated group is a powerful learning tool; an unmoderated one is a distraction.

Say this to the class:

> *"A community is like a garden. With norms and a gardener, it grows. Without them, it becomes weeds. Set the norms on day one, and tend the garden every week."*

F.8 The ethics check â€" minimum data, safe storage, consent, minors

The idea. Teaching is a position of trust. People give you their attention, their money, sometimes their children, and often their personal information. The ethics check makes sure you handle that trust properly. This is not optional â€" it is a condition of the course.

The five ethics rules for assessment and data:

1. **Collect the minimum data.** Ask for only what a course genuinely needs â€" usually a **name and an email**. Do not collect home addresses, bank details, BVN, NIN or unrelated documents for a short course.
2. **Store and share data carefully.** Keep learner lists, grades and recordings in a controlled place â€" not a public post or an open group. Never publish a learner's phone number, email, results, photo or video without explicit consent. Feedback goes to the individual, not the group.
3. **Get consent before recording or publishing.** Tell everyone in a live session it will be recorded, offer an alternative to those who object, and prefer "unlisted" to "public." Never record anyone secretly.
4. **Special care with minors.** For learners under 18, obtain consent from a parent or guardian before enrolment and before any recording or image is used. Never message a minor privately one-to-one without a parent or guardian knowing â€" keep communication in a group or copied to a guardian. Never request images, never use images of children without written permission, and never share a child's full name, school or location.
5. **Respect copyright.** Use only material you made, material free to use, or material you have permission for. Follow Creative Commons conditions and cite your sources. Never copy another teacher's slides, outline, worksheet, photos, music or video.

The ethics check questions (for the independent exercise):

1. What is the minimum personal data a short course needs?
2. Where should you keep learner grades and recordings?
3. What must you do before recording a live class?
4. What is the rule for messaging a minor one-to-one?
5. A learner sends you a photo of their work to use in your marketing. What do you need before you can use it?

Say this to the class:

> *"The rule is simple:* ***collect less, protect more, ask permission, credit the owner, tell the truth.***"

F.9 Summary of the lecture

- **Assessment** is how you see the learning â€" a quiz for quick checks, an assignment for bigger tasks.
- **Google Forms** builds auto-graded quizzes â€" match the question type to the outcome, write a clear answer key.
- **Google Classroom** hosts assignments â€" post, collect, mark.
- **A rubric** makes marking fair and fast â€" criteria, levels, ticks.
- **Feedback** is specific, kind and ends in a next step â€" never just "well done."
- **Certificates** are nice but honest â€" say exactly what the learner completed.
- **Support** is private and dignified â€" spot the quiet learner, reach out, remove barriers.
- **Community** needs norms â€" a moderated group is a garden, not a chaos.
- **Ethics:** collect less, protect more, ask permission, credit the owner, tell the truth.

```

G. INSTRUCTOR DEMONSTRATION (15 minutes)

Goal: Walk the class through building Ngozi's assessment pack â€" a 5-question Google Forms quiz with an answer key, a Classroom assignment with a rubric, and two feedback examples â€" thinking aloud so learners see the *decisions*.

Setup: Project Google Forms with a blank quiz. Have the rubric template and the feedback frames ready.

G.1 Step 1 â€" Build the quiz in Google Forms (6 minutes)

Say: "Ngozi's outcome is 'take three body measurements and record them accurately.' I need a quiz that checks that. Let me build it."

Build the quiz live (as in Section F.2):

> ***Q1 (multiple choice):*** *"Which of these is a body measurement? a) Bust b) Fabric c) Zip" â†' Answer: a) Bust. Points: 1.* ***Q2 (checkboxes):*** *"Select all the tools you need: a) Tape measure b) Scissors c) Hammer" â†' Answer: a) Tape measure. Points: 1.* ***Q3 (short answer):*** *"What is the first measurement you take?" â†' Answer: Bust. Points: 1.* ***Q4 (linear scale):*** *"How confident are you with measuring? 1â€"5" â†' Self-assessment. Points: 0.* ***Q5 (paragraph):*** *"In one sentence, how do you take a waist measurement?" â†' Manual mark. Points: 2.*

Say: "Five questions. Four auto-graded, one manual. I turned on 'Make this a quiz' in the settings. I set the points. I wrote the answer key â€" for Q3, I accepted 'bust' and 'Bust' as correct. When a learner submits, they see their score in seconds. I see every answer in a spreadsheet."

Point out the mapping: "Every question maps to the outcome. Q1 and Q2 check knowledge; Q3 checks the first step; Q4 is self-assessment; Q5 checks explanation. The quiz is not random â€" it is a mirror of the outcome."

G.2 Step 2 â€" Set up the assignment and rubric in Classroom (5 minutes)

Say: "Now the assignment â€" the bigger task. The learner submits their completed measurement chart. I post it in Classroom with a rubric."

Demonstrate in Google Classroom:

1. Create an assignment: "Submit your completed measurement chart."
2. Attach the Google Doc worksheet (learners get their own copy).
3. Set a due date and points (10).
4. Add the rubric (as in Section F.3): four criteria, three levels, ticks.

Say: "The rubric is the frame. When I mark, I tick the level for each criterion â€" 'all three measurements present' â†' Excellent (2). 'Measurements accurate' â†' Good (1). 'Chart complete and submitted' â†' Excellent (2). Total: 5/6. The learner sees exactly why. No argument, no mystery."

G.3 Step 3 â€" Write two feedback examples (3 minutes)

Say: "Now feedback. Two learners, two different situations."

Write on the board:

> ***Feedback 1 (strong work):*** *"Your chart is complete and your bust measurement is accurate â€" well done. One thing to improve: your waist measurement is 5cm smaller than your bust, which is unusual â€" please re-measure and check the tape is snug, not tight. Your next step: re-measure your waist and resubmit by Friday."*
>
> ***Feedback 2 (struggling learner):*** *"Thank you for submitting your chart, Ibrahim. I can see you tried hard. One thing to fix: your waist measurement is very tight â€" the tape should be snug, not tight. Please re-measure and resubmit by Friday. Here is a 1-minute clip showing the right tension. You can do this."*

Say: "Both are specific, kind and end in a next step. The first names what is good and fixes one issue. The second is encouraging and gives a concrete fix. Neither says 'well done' and nothing else."

G.4 The finished assessment pack (project it)

> ***NGOZI'S ASSESSMENT PACK***
>
> - ***Quiz:*** *5 questions in Google Forms, auto-graded, answer key written.*
> - ***Assignment:*** *"Submit your measurement chart" in Google Classroom, due Friday, 10 points.*
> - ***Rubric:*** *4 criteria, 3 levels, ticks â€" total /6.*
> - ***Feedback:*** *2 examples â€" specific, kind, next step.*

Questions to ask during the demo:

- "Why match the question type to the outcome?" (A multiple-choice question cannot test an explanation.)
- "Why is the answer key generous with acceptable answers?" (So a learner is not marked wrong for a spelling variation.)
- "Why is feedback private?" (It protects the learner's dignity and follows the ethics rules.)
- "What would you do if a learner scored 2/5?" (Reach out privately â€” see Section F.6.)

Expected result: Learners see that an assessment pack is not a pile of questions â€” it is a **system**: a quiz that checks, an assignment that proves, a rubric that makes it fair, and feedback that helps. They now have a complete model to copy.

H. GUIDED PRACTICAL EXERCISE (18 minutes)

Objective: With the instructor guiding, each learner builds their own **5-question quiz** in Google Forms and starts their **rubric**.

Starting materials: A Google account, a browser, the quiz plan template (Worksheet 5.1), the rubric template (Worksheet 5.2).

Procedure (instructor calls out each step; learners follow; instructor walks the room):

1. Open your quiz plan (Worksheet 5.1). Write your **outcome** at the top â€” the one your quiz will check.
2. Write **five questions**. For each, choose a question type that matches the outcome (multiple choice, checkboxes, short answer, dropdown, linear scale or paragraph).
3. Write the **correct answer** for each question â€” and for short answers, one acceptable alternative.
4. Open Google Forms. Turn on **"Make this a quiz"** in the settings.
5. Build your five questions. Set the points for each.
6. **Pause and predict:** For each question, ask: "Does this check my outcome?" If not, change it.
7. Now open your rubric template (Worksheet 5.2). Write **three criteria** for marking an assignment in your course.
8. For each criterion, write **three levels** (excellent / good / needs work) and assign marks.
9. **Check:** Do your criteria cover what the outcome asks? If not, add one.

Expected result: A 5-question quiz with an answer key, and a draft rubric with three criteria.

Points to pause on and predict:

- After step 3: "Who wrote a multiple-choice question for an outcome that needs an explanation? Fix it â€” use a paragraph question."
- After step 6: "Who has a question that does not check the outcome? What will you change?"

Troubleshooting while walking the room:

- Question type does not match the outcome â†' "What is the outcome? Does this question type test it? If not, change the type."
- No answer key â†' "Write the correct answer now â€” and one acceptable alternative for short answers."
- Rubric has only one criterion â†' "Add at least two more â€” what else matters for this task?"
- Learner cannot find "Make this a quiz" â†' "It is in Settings â†' Quizzes. Turn it on, then set points per question."

Completion checklist (learner ticks each):

- ☐ Five questions, each mapped to the outcome
- ☐ Question types match the outcomes
- ☐ Answer key written, with acceptable alternatives
- ☐ "Make this a quiz" turned on; points set
- ☐ Rubric with three criteria and three levels each
- ☐ Criteria cover what the outcome asks

I. INDEPENDENT CLASS EXERCISE (15 minutes)

Task (new task, done alone): Complete your **assessment and support pack** â€” finish the quiz, write feedback for two scenarios, and choose support steps for two struggling-learner scenarios. Then take the **ethics check**.

Scenario. You are the instructor of your own course. You have your quiz and rubric from the guided exercise. Now you finish the pack: write feedback for two learners, choose support steps for two struggling learners, and prove you understand the ethics rules.

Requirements:

1. **Finish your quiz** â€" all five questions built in Google Forms, auto-graded, answer key complete.
2. **Write feedback** for two scenarios:
   - **Scenario A:** A learner submitted excellent work â€" all measurements accurate, chart complete, on time.
   - **Scenario B:** A learner submitted work with several errors â€" measurements wrong, chart incomplete, late. Each feedback must be specific, kind and end in a clear next step.
3. **Choose support steps** for two struggling-learner scenarios:
   - **Scenario C:** A learner has missed two sessions and stopped replying to messages.
   - **Scenario D:** A learner is submitting work but scores are low and dropping. For each, write the private message you would send and the support step you would take.
4. **Take the ethics check** â€" answer the five ethics questions (Section F.8) in writing. You need at least 4 out of 5 to pass.

Time allowance: 15 minutes.

Success criteria:

- Quiz complete with answer key.
- Two feedback examples â€" specific, kind, next step.
- Two support scenarios â€" private message + support step.
- Ethics check passed (at least 4/5).

Hints if stuck:

- Hint 1: For feedback, use the sentence frames: "You did [specific] wellâ€¦ One thing to improve: [issue]â€¦ Your next step is: [action]."
- Hint 2: For support, remember the order: private message â†' extra time â†' alternative task â†' catch-up path â†' referral.
- Hint 3: For the ethics check, think: "What would I want someone to do with my data?"

INSTRUCTOR ANSWER KEY (model solution â€" do not show learners):

> ***Feedback A (excellent work):*** *"Your measurement chart is complete and all three measurements are accurate â€" well done. Your waist measurement is in the right range and your units are clear. One thing to add: a short note on how you will use these measurements when you cut your pattern â€" that will connect this lesson to the next. Your next step: bring your chart to the live Q&A on Saturday."*
>
> ***Feedback B (struggling work):*** *"Thank you for submitting your chart, Chinedu. I can see you tried hard. Two things to fix: your waist measurement is very tight â€" the tape should be snug, not tight â€" and your hip measurement is missing. Please re-measure both and resubmit by Friday. Here is a 1-minute clip showing the right tension. You can do this."*
>
> ***Support C (missed sessions, stopped replying):*** *Private message: "Hello Adaeze â€" I missed you at the last two sessions and I have not heard from you. Is everything okay? I am here if you need help â€" no pressure. If the sessions do not suit your time, I can send you the recordings and we can find a catch-up plan that works for you." Support step: send the recordings, offer a catch-up call on WhatsApp audio, and give an extension on the next assignment.*
>
> ***Support D (submitting but scores dropping):*** *Private message: "Hello Ibrahim â€" I have noticed your last two quizzes were lower than your first. I know you can do this â€" your first quiz was strong. Would you like a 10-minute catch-up call this week? We can go over the parts that are tricky. No cost, no pressure â€" just help." Support step: offer a short catch-up call, send a targeted practice task, and check in after the next quiz.*
>
> ***Ethics check answers:***
>
> 1. *Minimum data: a name and an email â€" nothing more for a short course.*
> 2. *Store grades and recordings in a controlled place â€" a private folder, not a public post or open group.*
> 3. *Before recording: tell everyone the class will be recorded and offer an alternative to those who object.*
> 4. *Messaging a minor one-to-one: never without a parent or guardian knowing â€" keep communication in a group or copied to a guardian.*
> 5. *Using a learner's photo in marketing: you need their explicit written consent first.*

Learner marking (out of 10):

- *Quiz complete with answer key (2)*
- *Two feedback examples â€" specific, kind, next step (3)*
- *Two support scenarios â€" private message + step (3)*
- *Ethics check passed (2)*

J. REAL-WORLD CASE STUDY

Situation. *Mama J* runs a JAMB mathematics class in Port Harcourt. She moved her class online when her students could not attend in person. She recorded her lessons, set up a WhatsApp group, and told the students: "Watch the videos and do the exercises." After three weeks, she gave her first online quiz â€" 10 questions typed into a Word document and posted in the group. The results were a disaster. Only 3 of 20 students scored above 50%. She was confused: "I taught everything. Why did they fail?"

Relevant facts.

- Mama J is a strong teacher â€" her in-person students usually score well.
- Her quiz was a Word document posted in the group â€" students typed answers in the chat or sent photos.
- The quiz had no answer key, no rubric and no auto-grading â€" she marked 20 handwritten photos by hand, taking two evenings.
- She had not checked whether the quiz matched her lessons â€" she tested some things she never taught.
- One student, *Funmi*, scored 20% and stopped attending. Mama J posted in the group: "Some of you need to try harder. Funmi, you are a disgrace to this class." Funmi left the group.

Decision point. Mama J's online assessment is failing â€" for her students and for her. What should she change?

Possible approaches.

1. **Blame the students** â€" "They are lazy. Online students are not serious."
2. **Make the quiz harder** â€" "Maybe they will take it seriously if it is tougher."
3. **Redesign the assessment** â€" match the quiz to the lessons, use auto-grading, add a rubric, give private feedback and support Funmi.

Recommended solution. Approach 3. The students are not lazy â€" the assessment is broken. A quiz that tests things never taught is a test of luck, not of the students. A harder quiz would fail more students and still test the wrong things. Every problem has a simple, free fix.

The redesign (what Mama J did):

- **Matched the quiz to the lessons:** She wrote one quiz question per outcome â€" only testing what she had taught.
- **Moved to Google Forms:** She built the quiz with auto-grading â€" multiple choice and short answer for the facts, one paragraph question for the explanation. The tool marked the easy questions; she marked only the paragraph.
- **Added a rubric:** For the paragraph question, she wrote a simple rubric â€" correct method (2), clear explanation (2), correct answer (1). Marking took 10 minutes instead of two evenings.
- **Gave private feedback:** Instead of posting scores in the group, she messaged each student privately: "You scored 6/10. You are strong in solving equations â€" well done. One thing to fix: the quadratic formula. Watch the 3-minute clip I am sending and try the two practice questions. You can do this."
- **Supported Funmi:** She messaged Funmi privately: "Hello Funmi â€" I noticed you found the last quiz hard. I am sorry for my message in the group â€" that was wrong, and I apologise. Would you like a short catch-up call this week? We can go over the parts that are tricky. No pressure â€" just help." Funmi accepted, had the call, and her next score was 65%.

The result: The class average rose from 42% to 71% in three weeks. Funmi stayed. Mama J's marking time fell from two evenings to 30 minutes. And she learned the most important lesson: **assessment is a mirror, not a weapon â€" and feedback is a gift, not a verdict.**

Trade-offs. The redesign took one evening â€" the investment this session asks of every learner. She had to apologise to Funmi â€" and that took courage, but it saved a learner. The first redesigned quiz was not perfect; she adjusted it after seeing the results. That is normal â€" assessment improves with use.

Professional connection. This is the pattern behind every fair, effective assessment: **match the test to the teaching, use tools that save time, mark with a rubric, give private feedback, and support the struggling learner with dignity.**

K. COMMON MISTAKES AND TROUBLESHOOTING

Use this table as the live guide. Point learners to the row rather than giving the answer.

K.1 A quiz that tests things never taught

Symptoms: Learners fail despite attending; the teacher is confused. **Likely cause:** The quiz was written from the subject, not from the lessons â€" it tests things that were never taught. **How to investigate:** For each quiz question, ask: "Which lesson taught this?" If the answer is "none," the question is unfair. **Corrective steps:** Rewrite the quiz so every question maps to a lesson and an outcome. Test only what you taught. **How to confirm resolved:** Every question traces to a lesson. **Prevention:** Build the quiz from the curriculum map â€" one question per outcome.

K.2 All multiple-choice questions

Symptoms: The quiz can only test facts â€" not skills or explanations. **Likely cause:** The learner defaulted to multiple choice because it is easiest. **How to investigate:** Look at the outcomes â€" do any need an explanation or a skill? If so, multiple choice cannot test them. **Corrective steps:** Match the type to the outcome â€" paragraph for explanations, short answer for specific answers, linear scale for self-assessment. **How to confirm resolved:** Each question type matches its outcome. **Prevention:** Always ask: "What is the outcome? Does this question type test it?"

K.3 No answer key (or a harsh one)

Symptoms: Learners are marked wrong for acceptable answers; marking is slow. **Likely cause:** The answer key is missing or too strict â€" "bust" is correct but "Bust" is marked wrong. **How to investigate:** Check the answer key â€" are acceptable alternatives included? **Corrective steps:** Write the answer key with acceptable alternatives. For short answers, accept spelling variations. **How to confirm resolved:** A learner with a correct-but-differently-worded answer is marked correct. **Prevention:** Write the answer key before the quiz, not after.

K.4 Vague feedback ("good job")

Symptoms: Learners do not know what to improve; they repeat the same mistakes. **Likely cause:** The feedback is polite but empty. **How to investigate:** Read the feedback â€" does it name a specific thing and a next step? If not, it is vague. **Corrective steps:** Use the frames: "You did [specific] wellâ€¦ One thing to improve: [issue]â€¦ Your next step is: [action]." **How to confirm resolved:** The learner can state what to do next. **Prevention:** Never write feedback without a specific and a next step.

K.5 Public posting of scores or feedback

Symptoms: Learners feel shamed; trust breaks; learners leave the group. **Likely cause:** The instructor posted scores or critical feedback in the group. **How to investigate:** Is any learner's score or feedback visible to the group? If so, it is a breach. **Corrective steps:** Remove the post. Apologise. Move all feedback to private messages. **How to confirm resolved:** No learner's data is visible to the group. **Prevention:** Feedback is private â€" always. The rule: praise publicly, correct privately.

K.6 Ignoring the quiet learner

Symptoms: A learner stops attending and submitting; the instructor notices too late. **Likely cause:** The instructor did not spot the early signs â€" missed sessions, dropped scores, silence. **How to investigate:** Check attendance and submission records â€" who has gone quiet? **Corrective steps:** Reach out privately and kindly. Offer support. Remove barriers. **How to confirm resolved:** The learner responds and re-engages. **Prevention:** Check your records weekly â€" spot the quiet learner before they disappear.

K.7 Over-collecting learner data

Symptoms: The course asks for BVN, NIN, home addresses or bank details. **Likely cause:** The instructor copied a form from somewhere without thinking. **How to investigate:** Look at your enrolment form â€" what do you actually need? If it is more than a name and an email, cut it. **Corrective steps:** Collect the minimum â€" a name and an email. Delete any unnecessary data you already collected. **How to confirm resolved:** Your form asks for only what the course needs. **Prevention:** The rule: collect less, protect more.

K.8 Dishonest certificate wording

Symptoms: A certificate says "Certified Online Teacher" for a two-week beginner course. **Likely cause:** The instructor wanted the certificate to sound impressive. **How to investigate:** Read the certificate â€" does it say exactly what the learner completed? If it over-claims, it is dishonest. **Corrective steps:** Rewrite the certificate honestly: "Completed a 6-session online teaching course at Cyber Elias Academy." **How to confirm resolved:** The certificate states exactly what was done â€" no more. **Prevention:** An honest certificate is worth more than a fancy lie.

Distinguish likely vs confirmed: A "likely cause" becomes "confirmed" only after you check it â€" for example, the learner can actually point to a quiz question that maps to no lesson, or actually show feedback with no next step. Teach learners to confirm before concluding.

L. SESSION ASSIGNMENT

Assignment title: "My Assessment and Support Pack â€" Quiz, Rubric, Feedback and Support"

Purpose: To practise building a fair, useful assessment system â€" the evidence that learning happened â€" and to build the capstone's assessment and learner-support sections.

Realistic scenario. You are the instructor of your own course. You have your outcomes, your content and your engagement plan. Now you build the assessment and support system: a quiz that checks the learning, an assignment with a rubric, feedback that helps, and support for the learners who struggle. This becomes the assessment and learner-support sections of your capstone in Session 6.

Detailed instructions:

1. Build a **5-question quiz** in Google Forms with auto-grading and an answer key. Each question must map to an outcome.
2. Set up an **assignment in Google Classroom** with a **rubric** â€" three criteria, three levels each.
3. Write **two feedback examples** â€" one for excellent work, one for struggling work. Each must be specific, kind and end in a next step.
4. Write a **support plan** for two struggling-learner scenarios: the private message you would send and the support step you would take.
5. Write a **one-paragraph ethics note** for your course: what data you collect, how you store it, how you get consent, and how you handle minors and copyright.

Required deliverables:

- A 5-question quiz in Google Forms (link).
- An assignment in Google Classroom with a rubric (screenshot or link).
- Two feedback examples.
- A support plan for two scenarios.
- A one-paragraph ethics note.

Submission format: Save as `A4_YourName.docx` (or `.pdf` or a folder) and upload to `/Online-Teaching/Week2/A4/`. Include links to your Forms quiz and your Classroom assignment.

Deadline: Before Session 6.

Marking rubric (10 marks):

Criterion	Marks	Description of a strong answer
Quiz mapped to outcomes	2	Five questions, each mapped to an outcome; types match
Rubric with criteria and levels	2	Three criteria, three levels, marks assigned
Feedback â€" specific, kind, next step	2	Two examples, each with all three parts
Support plan	2	Two scenarios, private message + support step
Ethics note	1	Covers data, storage, consent, minors, copyright
Honest certificate wording (bonus awareness)	1	Wording states exactly what was completed

Common mistakes to avoid: a quiz that tests things never taught; all multiple-choice questions; no answer key; vague feedback; public posting of scores; ignoring the quiet learner; over-collecting data; dishonest certificate wording.

INSTRUCTOR REFERENCE SOLUTION (do not show learners):

> ***Quiz â€" Ngozi's measurement quiz:*** *As in Section G. Five questions, auto-graded, answer key with acceptable alternatives.*
>
> ***Assignment and rubric:*** *"Submit your measurement chart" in Google Classroom, due Friday, 10 points. Rubric: four criteria (measurements taken, accuracy, completion, submission), three levels, total /6.*
>
> ***Feedback examples:*** *As in the Section I answer key â€" one for excellent work, one for struggling work. Both specific, kind, with a next step.*
>
> ***Support plan:*** *As in the Section I answer key â€" Scenario C (missed sessions) and Scenario D (dropping scores). Private messages and support steps.*
>
> ***Ethics note (model):*** *"In this course I collect only a name and an email address â€" the minimum needed to run the class. I store learner lists, grades and recordings in a private Google Drive folder, not in any public place. I never publish a learner's score, photo or work without their written consent. If I record a live session, I tell everyone at the start and offer an alternative to those who object. For learners under 18, I obtain consent from a parent or guardian before enrolment and before any recording or image is used, and I never message a minor privately one-to-one without a guardian knowing. All course material is my own or free to use; I credit any free material I use."*

M. KNOWLEDGE CHECK

(Learner version â€" answers only in the Instructor Key below.)

Q1. Short answer. What is the difference between a quiz and an assignment?

Q2. Multiple choice. Which question type is best for checking an outcome that asks the learner to "explain how to take a waist measurement"? a) Multiple choice b) Checkboxes c) Paragraph d) Linear scale

Q3. Explain. Why should feedback be specific, kind and end in a next step? Give one reason for each part.

Q4. Practical. A learner scores 2/5 on your quiz. Describe the three things you would do â€" in order.

Q5. Matching. Match each ethics rule to its example: **collect the minimum / store carefully / get consent / special care with minors / respect copyright.** a) Ask for only a name and an email. b) Keep grades in a private folder, not a public post. c) Tell everyone before recording a live class. d) Never message a minor one-to-one without a guardian knowing. e) Use only your own, free or permitted material.

Q6. Scenario. You posted a learner's low score in the group chat "to motivate them." What is wrong with this, and what should you do instead?

INSTRUCTOR ANSWER KEY (Q1â€"Q6)

A1. A quiz is a quick check of knowledge â€" often auto-graded, used at the end of a lesson or module. An assignment is a larger task the learner produces and submits â€" used at the end of a module or course. (Accept any answer covering "quick check" vs "larger task.")

A2. (c) Paragraph. (The outcome asks for an explanation, which needs a longer typed answer â€" not a choice, a checkbox or a scale.)

A3. Specific â€" so the learner knows exactly what was good or what is wrong (not just "good job"). Kind â€" so the learner feels encouraged, not shamed. Next step â€" so the learner knows exactly what to do to improve. (Accept one correct reason for each part.)

A4. Three things, in order: (1) Reach out privately and kindly â€" "I noticed the quiz was hard; is everything okay?" (2) Offer support â€" a catch-up clip, a practice task, a short call. (3) Give a clear next step â€" "watch this clip and try these two questions by Friday." (Accept any correct ordering that includes private outreach and support.)

A5. collect the minimum = (a); store carefully = (b); get consent = (c); special care with minors = (d); respect copyright = (e).

A6. What is wrong: posting a learner's score publicly shames them, breaks their trust and breaches the ethics rule that feedback goes to the individual, not the group. What to do instead: remove the post, apologise to the learner privately, and give feedback privately â€" specific, kind, with a next step. (Accept any answer covering the privacy breach and the private alternative.)

N. REFLECTION AND RECAP

Plain-English summary. Today you learned to prove that learning happened. You learned to build a **quiz in Google Forms** with auto-grading â€" matching question types to outcomes and writing a clear answer key. You learned to set up an **assignment in Google Classroom** and mark it with a **simple rubric** â€" criteria, levels and ticks that make grading fair and fast. You learned to write **feedback that helps** â€" specific, kind and ending in a clear next step, never just "well done." You learned that a **certificate** is nice but its wording must be honest. You learned to **support struggling learners** â€" spot them early, reach out privately, remove barriers and keep their dignity. You learned that a **learner community** needs norms â€" a moderated group is a garden, not a chaos. And you took the **ethics check** â€" collect the minimum, store carefully, get consent, special care with minors, respect copyright.

Five important takeaways:

1. **Assessment is a mirror, not a weapon** â€" a quiz checks, an assignment proves, a rubric makes it fair.
2. **Match the question type to the outcome** â€" and write a generous answer key.
3. **Feedback is a gift** â€" specific, kind, with a next step â€" and always private.
4. **Support is private and dignified** â€" spot the quiet learner, reach out, remove barriers.
5. **Ethics is non-negotiable** â€" collect less, protect more, ask permission, credit the owner, tell the truth.

Questions to help you recognise what you can now do:

- Can I build an auto-graded quiz with an answer key?
- Can I match a question type to an outcome?
- Can I write a rubric with criteria and levels?
- Can I write feedback that is specific, kind and has a next step?
- Can I choose a support step for a struggling learner?
- Can I pass the ethics check?
- Can I state what my certificate should honestly say?

Connection to the next session. You now have everything: a designed course, real content, a live delivery skill and an assessment system. Next session â€" **Capstone: Design and Deliver a Mini-Lesson** â€" you assemble it all into the certificate evidence: a **complete mini-course outline** and a **5â€"10 minute mini-lesson**, delivered live or recorded, then **defended** in a short viva. Bring every artefact â€" your decision card, outcomes, map, lesson plan, content pack, engagement plan and assessment pack. The capstone is not new work â€" it is the final assembly of everything you have built.

O. INSTRUCTOR EVALUATION NOTES

Observable signs of genuine competence:

- Learner's quiz maps every question to an outcome and uses varied question types.
- Learner's rubric has clear criteria and levels â€" and they can explain why each criterion matters.
- Learner's feedback is specific, kind and ends in a next step â€" without being told.
- Learner's support plan is private and dignified â€" no public shaming.
- Learner passes the ethics check and can explain the rules in their own words.
- Learner's certificate wording is honest.

Common misconceptions to watch for and correct:

- "A quiz tests everything." â†' It tests the outcomes â€" match each question to one.
- "Multiple choice is the only type." â†' Match the type to the outcome.
- "Feedback is a verdict." â†' It is a gift â€" specific, kind, next step.
- "Posting scores motivates." â†' It shames and breaches privacy. Feedback is private.

- "Support means lowering standards." â†’ It means removing barriers; the standard stays.
- "A certificate can say anything." â†’ It must say exactly what the learner completed.
- "Ethics is someone else's job." â†’ It is everyone's job â€” collect less, protect more.

Suggested remedial exercises for learners who struggle:

1. **Question-type matching:** give five outcomes and five question types; the learner matches them and explains why.
2. **Feedback rewrite:** give three vague feedback comments ("good job," "needs work," "well done"); the learner rewrites each with a specific and a next step.
3. **Ethics scenario sort:** give five scenarios (some ethical, some not); the learner sorts them and explains the rule each breaks or follows.

Differentiation:

- **Level 1 (supported):** provide a quiz plan with the outcomes and question types already chosen; the learner writes the questions and answers. Provide a rubric with the criteria already written; the learner writes the levels.
- **Level 2 (standard):** the session as written â€” full quiz, rubric, feedback, support plan, ethics note.
- **Level 3 (challenge):** ask the learner to design a **second** version of their quiz for a different outcome and explain in a short paragraph how the question types changed and why â€” showing they can match types to different kinds of outcome.

Capstone links. The assessment and support pack completed today becomes the **assessment plan and learner-support sections** of the capstone mini-course outline in Session 6. A learner who completes it well already owns the evidence that learning happened. Remind learners to keep every artefact in their working folder (`CEA-OT-FirstnameLastname`).

Timing guidance. The priority is **learners building a real quiz and writing real feedback** (Sections H and I). If the room is slow, shorten the community lecture (F.7) to a 5-minute summary and protect the quiz build. A learner who leaves without a quiz and a feedback example has no assessment evidence for the capstone.

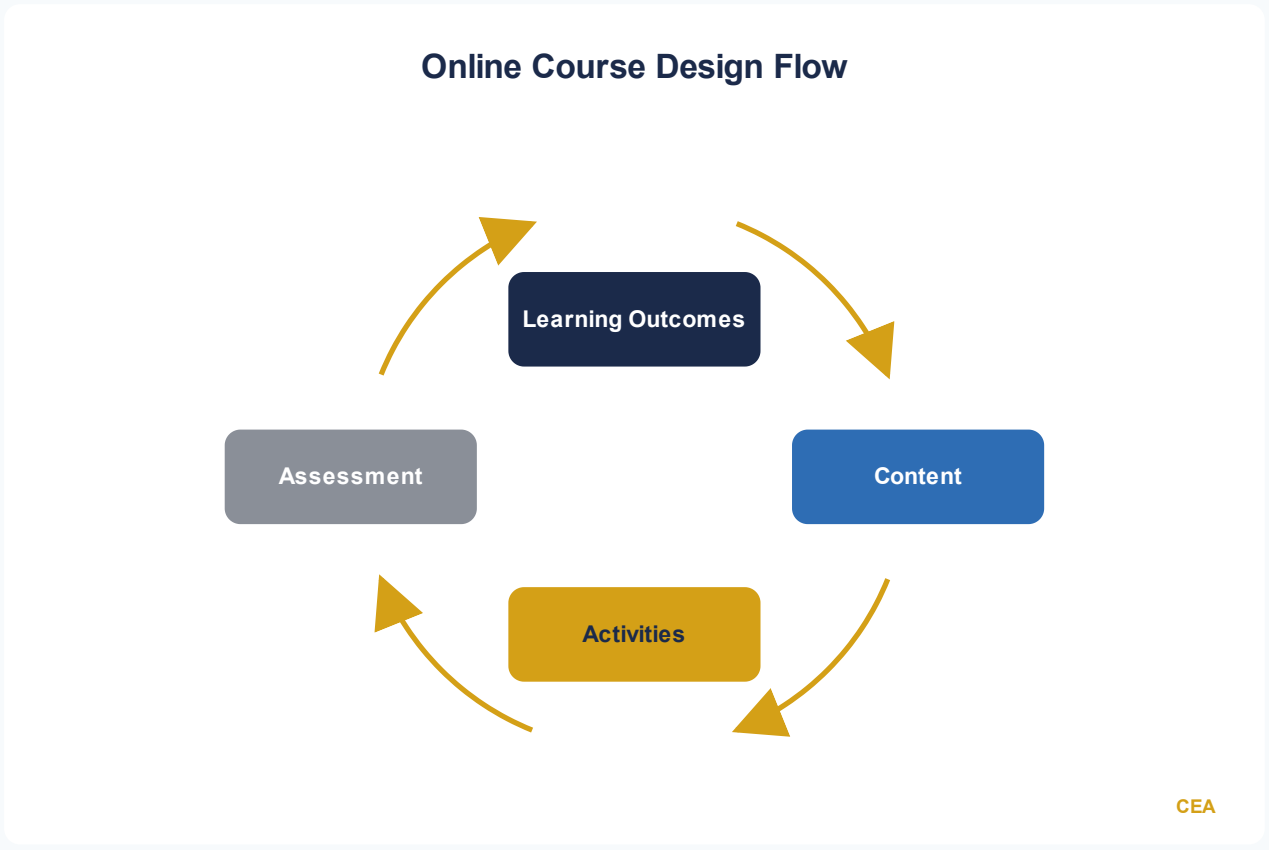

END OF SESSION 5

Next: Session 6 â€” Capstone: Design and Deliver a Mini-Lesson.

SESSION 06 OF 6

Capstone Design and Deliver a Mini Lesson

CONCEPT DIAGRAM — SESSION 06

CYBER ELIAS ACADEMY â€" ONLINE TEACHING

SESSION 6 â€" CAPSTONE: DESIGN AND DELIVER A MINI-LESSON

A. SESSION IDENTIFICATION

Item	Detail
Session number	6 of 6
Session title	Capstone: Design and Deliver a Mini-Lesson
Week / Module	Week 2 â€" Module 2: Deliver and Grow
Recommended duration	105 minutes
Difficulty level	Beginner (assembly, delivery and spoken defence â€" no new software taught)
Prerequisite knowledge	Sessions 1â€"5 completed. Learners must bring their full working folder: the Session 1 mode/platform decision card, the Session 2 outcomes, curriculum map and timed lesson plan,

Item	Detail
	the Session 3 content pack (slides, short recording, worksheet, copyright checklist), the Session 4 engagement plan and micro-teach notes, and the Session 5 quiz, rubric, feedback examples and ethics note. Learners should have decided whether their mini-lesson will be recorded or live.
Connection to previous work	In Session 5 you built the assessment and support system â€" the quiz, rubric, feedback and support plan. Today you stop building separate pieces and **assemble everything** into the certificate evidence: a complete mini-course outline plus a 5â€"10 minute mini-lesson, which you present and defend. Nothing today is new work â€" it is the final, honest assembly of everything you have made across the course.
Preparation before class	Confirm every learner can access their working folder (`CEA-OT-FirstnameLastname`). Prepare a projector showing the finished exemplar capstone (Section G): Ngozi's one-page outline, her 7-minute recorded mini-lesson (or a detailed walkthrough of it) and her defence answers. Print the outline template (Worksheet 6.1), the mini-lesson plan template (Worksheet 6.2) and the defence prep card (Worksheet 6.3). Have a timer visible. Draft the viva slot schedule for days after Session 6 (5-minute slots; assign each learner their slot at the end of Session 5 â€" see Â§L). Read the Course Design Document Sections 5 (LO8), 12 (Capstone), 13 (Certification) and 15 (Ethics) before class.

Instructor note on tone: This is the final session, and it carries two jobs. The first is practical: every learner leaves with a **complete, assembled capstone** â€" the outline filled in, the mini-lesson planned or recorded, and three defence answers written down. The second is personal: this is the session where a learner who has quietly struggled all course finally sees that they own something real. Move briskly through the assembly (it is familiar material), but slow down for the defence and the close. A learner who leaves thinking "I built this" has learned the course; a learner who leaves thinking "he talked for two hours" has not. End the session by telling the truth about what they can now do â€" no more, and no less.

B. LEARNING OUTCOMES

By the end of this session, the learner will be able to:

1. **Assemble a complete one-page mini-course outline** from their existing artefacts â€" course title, target learner, delivery mode and reasons, five lessons each with a measurable outcome, the free tools used, a schedule, an assessment plan and an ethics note â€" with every outcome taught and checked. *(Design doc LO8, LO2.)*
2. **Produce a 5â€"10 minute mini-lesson**, recorded or live, that has a clear opening tied to a stated outcome, at least one piece of learning content, a moment of learner interaction or practice, and a closing check for understanding. *(Design doc LO8, LO4, LO5.)*
3. **Choose and justify recorded or live delivery** for their mini-lesson, applying the free-tool, low-data and time-management lessons from Sessions 1â€"4. *(Design doc LO8, LO1.)*
4. **Present and defend their design choices orally**, answering at least three viva questions accurately by pointing to concrete evidence from their artefacts. *(Design doc LO8.)*
5. **Verify their outline against the ethics rules** â€" minimum data, safe storage, consent, minors, and copyright â€" and state what their CEA certificate honestly certifies. *(Design doc LO7, LO8.)*

C. REQUIRED MATERIALS

Hardware

- One smartphone per learner (with a browser and storage space for a recording) or an academy laptop. Either is enough.
- Earphones with a microphone (the bundled pair is fine â€" but remind learners that earphones massively improve recorded audio).
- Instructor device connected to a projector or large screen.
- A visible timer (a phone timer is fine).

Software (all free)

- **Google Docs** â€” for the one-page outline, the mini-lesson plan and the written defence.
- **Canva** (free) or **Google Slides** â€” for the mini-lesson's slides, if slides are used.
- **OBS Studio** or the device's built-in recorder â€” for a recorded mini-lesson.
- **YouTube (unlisted)** â€” for hosting a recorded mini-lesson.
- **Zoom or Google Meet** â€” for a live mini-lesson and for the viva.
- **Google Forms / Google Classroom** â€” for the quiz, worksheet and assignment the mini-lesson connects to.
- **WhatsApp** â€” for the learner community and the practice prompt during a recorded lesson.

Sample files

- **The finished exemplar capstone** (Section G) â€” Ngozi's outline, her recorded mini-lesson (or a timestamped walkthrough of it) and her defence answers, projected.
- **A thin "wrong" outline** (Section D) â€” a vague one-page course sketch, projected.
- **Worksheet 6.1** â€” "My Mini-Course Outline" template (printed, one per learner).
- **Worksheet 6.2** â€” "My Mini-Lesson Plan" template (printed, one per learner).
- **Worksheet 6.3** â€” "My Defence Prep" card (printed, one per learner).

Worksheets

- Worksheet 6.1 â€” the outline template with the eight parts as labelled boxes: title / target learner / mode + reasons / five lessons with outcomes / tools + schedule / assessment plan / ethics note.
- Worksheet 6.2 â€” the mini-lesson plan: outcome, opening (0:00â€“), input, practice moment, check for understanding, close, plus a "total minutes" box.
- Worksheet 6.3 â€” three defence questions with five lines each for spoken answers, plus an "evidence I will point to" column.

Accounts

- A free **Google** account (opens Docs, Slides, Forms, Classroom, YouTube, Meet).
- A free **Canva** account and a free **Zoom** account (created in Sessions 1â€“3; create in class if needed).

Internet

- Academy Wi-Fi in class for Google tools and YouTube. The outline assembly and defence writing work fully offline; recording and hosting need internet.

Alternative for learners who lack a facility

- Any phone with a browser works. A learner who cannot type quickly may dictate their outline and defence answers to a classmate or write them by hand â€” the skill is the **assembly and the thinking**, not the typing. A learner who cannot record at home may book the academy corner for 20 minutes before or after class.

Safety note: The capstone includes real decisions about real learners â€” a recorded lesson, a class group, consent. Rehearse the ethics rules one final time: collect the minimum data, store it carefully, get consent before recording or publishing, use "unlisted" not "public", give special care to minors, and use only your own or free-to-use material. No learner's personal data, and no images of minors, without written consent. A mini-lesson is the learner's own work â€” never present someone else's material as yours.

D. OPENING ACTIVITY (6 minutes)

Instructor setup: Project two outlines side by side. Do not label them yet.

> ***Outline A:*** *"Course: Sewing. Lessons: 1) measurements, 2) fabric, 3) cutting, 4) sewing, 5) finishing. Quiz at the end. Use Zoom."*
>
> ***Outline B:*** *Ngozi's complete one-page outline (abbreviated on screen â€” title, target learner, mode with one-line reason, five lessons with one-line outcomes, tools and schedule, assessment plan, ethics note). The full version is in Section F.2.*

What the instructor says:

> *"Good morning â€" and welcome to the final session. On the screen are two course outlines. Read them both. Now â€" be honest â€" if a stranger messaged you one of these and said 'run my class for me,' which one could they actually run? â€¦ The second one, obviously. Why?"*

Let the class call out differences. Then reveal:

> *"Outline A is a wish list. Outline B is a **plan**. A has no learner, no outcomes, no reasons, no schedule, no assessment and no ethics. B has eight parts, and each part answers a question a real stranger would ask: Who is this for? Why this mode? What will they learn? How will I know they learned it? What data will I collect, and is that fair? Today you take five sessions of work and assemble it into something like Outline B â€" and then you stand up and defend it. That is the capstone. That is what earns the certificate."*

Then ask the second question:

> *"Raise your hand if, at some point in this course, you thought: 'I will never get all this together.' â€¦ Good â€" most of you. Here is the truth: you already have. Every artefact you need exists. Your decision card is in your folder. Your outcomes are in your folder. Your slides, your recording, your quiz, your rubric â€" all in your folder. Today is not new work. Today is **assembly, delivery and defence**. By the end of this session, your capstone will be whole."*

Expected learner response: Learners will say Outline B "tells you who it is for," "it has outcomes," "it has reasons," "it has a plan." Accept all answers and draw out the eight parts. For the second question, nearly every hand goes up â€" name it honestly, it builds trust.

Why this opener works: It shows the gap between "I have ideas" and "I have a plan" in thirty seconds, it names the eight parts before any teaching, and it lowers the fear of the capstone by proving the material already exists. The message: the capstone is not a mountain â€" it is a folder, closed.

E. PREREQUISITE REVIEW (7 minutes)

Run this as a fast oral round-robin. Put the questions on the projector. Go learner to learner; do not answer for them.

Question 1: "Point to your folder. What did you produce in Session 1 â€" and what one decision does it record?"

- Expected answer: The mode/platform decision card â€" the mode chosen (live, recorded, cohort or one-to-one) and the free platform stack, with reasons.
- Common gap: some learners left the decision vague. Clarify: "If your card just says 'use Zoom,' add one line of why. One line is enough â€" but it must be there. You will need that line in the defence."

Question 2: "What did Session 2 give you â€" the two documents?"

- Expected answer: Five measurable outcomes plus a curriculum map, and one timed lesson plan.
- Common gap: outcomes with vague verbs. Clarify: "Check your outcomes one more time â€" action verb? If any says 'understand' or 'know about,' rewrite it now with a verb like list, identify, demonstrate, build, produce. You will defend these today."

Question 3: "What is in your Session 3 content pack â€" name the four items."

- Expected answer: A short slide deck, a 60â€"90 second recording, a worksheet that makes the learner do something, and a copyright checklist.
- Common gap: a missing copyright checklist. Clarify: "The copyright checklist goes in your outline's ethics note today. If yours is empty, write one line: 'All material is my own or free to use; I credit any free material.'"

Question 4: "What did you run in Session 4 â€" and what is the magic number for engagement?"

- Expected answer: A 10-minute micro-teach using at least two participation tools (poll, chat prompt, hand raise, breakout, whiteboard). The magic number is eight â€" something asked or done at least every eight minutes.
- Common gap: learners who talked for ten straight minutes. Clarify: "Online silence is usually a design failure. Your mini-lesson needs at least one planned moment where the learner does something â€" answers, pauses, tries, submits."

Question 5: "What did Session 5 give you â€" the four pieces?"

- Expected answer: A Google Forms quiz with an answer key, an assignment with a rubric, feedback examples (specific, kind, next step), and a support plan â€" plus the ethics check.
- Common gap: an ethics note that was never written down. Clarify: "Your ethics note is one paragraph. You wrote the answers on the ethics check â€" today you shape them into a paragraph for the outline."

Bridge to today (say this):

> *"Five sessions, five artefacts, one folder. Today the folder closes. You assemble the outline, you prepare your 5â€"10 minute mini-lesson â€" recorded or live â€" and you learn to defend every choice you made. By the end of this course you will hold something real: a designed course, a taught lesson, and the ability to explain both. That is what a certificate is for."*

If more than a third of the class cannot name their own five artefacts, spend 5 extra minutes in pairs: each learner opens their folder and shows their neighbour the five pieces, naming each one. Do not continue until everyone can point at something real.

F. FULL LECTURE NOTES

F.1 Why the capstone exists â€" assembly, not new work

The idea. For five sessions you have been building a small course piece by piece. A builder does not buy a new house the day before handing over the keys â€" they do the last job: they walk through every room, check every door closes, and fix what is loose. That walk-through is the capstone. It asks one honest question: *can you assemble everything you have learned into a course that a stranger could run, teach one lesson from it, and explain every decision you made?*

What the capstone is. Three things, together:

1. **A one-page mini-course outline** â€" your course on a single page: who it is for, how it runs, what the learner learns, how you know they learned it, and how you keep it ethical.
2. **A 5â€"10 minute mini-lesson** â€" one real lesson from that course, either recorded (OBS or your phone's built-in recorder, hosted free as an unlisted video) or delivered live, with an opening tied to an outcome, real learning content, a moment where the learner does something, and a closing check.
3. **A defence** â€" you present your work and answer questions about it, aloud, pointing to your artefacts as evidence.

Why it is assembled, not invented. A learner who completed Sessions 1â€"5 already owns almost the entire capstone. The decision card becomes the "mode and tools" section. The outcomes and map become the five-lesson structure. The slides, recording and worksheet become the mini-lesson's content. The engagement plan becomes the interaction moment. The quiz, rubric, feedback and support plan become the assessment and support sections. Today is the day the pieces stop being separate and start being **one thing**.

What the capstone proves. Not that you are a qualified teacher â€" the course has never claimed that. It proves the honest, limited, real thing the design document promises: that you can sit down with a phone and a free account and build something a learner can actually use. That is employable. That is verifiable. That is what the CEA Certificate in Online Teaching certifies â€" and nothing more.

Say this to the class:

> *"The capstone is not a test of how much you remember. It is a test of whether your folder is **whole** â€" whether every promise you made in Session 1 is kept by Session 5. If your outline says five lessons, five lessons appear. If your outcome says 'demonstrate,' something in your course asks the learner to demonstrate. If your ethics note says 'minimum data,' your quiz and enrolment form collect the minimum. Wholeness is the whole assignment."*

F.2 Assembling the one-page mini-course outline â€" the eight parts

The idea. A one-page outline is a contract between you and a stranger. It says: this is who the course is for, this is how it runs, this is what the learner will be able to do, this is how I will know, and this is how I will behave. Eight parts, one page, no blank boxes.

The eight parts, and what each one must contain:

Part	What it answers	What a strong answer looks like
1. Course title	What is this course called?	A specific, plain title: "Sewing Basics: Cut and Sew Your First A-Line Skirt" â€" not "Sewing Course."
2. Target learner	Who exactly is this for â€" and what do they already know?	"A complete beginner who owns or can borrow a sewing machine. She has never cut a pattern. She learns mainly from her phone, possibly on mobile data."
3. Delivery mode and why	How does the course run â€" live, recorded, cohort or one-to-one â€" and why this one?	"Cohort: five recorded lessons released over two weeks, plus one live Q&A. Chosen because my learners are in different cities and on different data budgets â€" they can watch anytime, and the live session fixes what recordings cannot."
4. Five lessons, each with a measurable outcome	What does the learner learn â€" in order?	Five numbered lessons. Each has one outcome that starts with an action verb and can be checked.
5. Free tools used	Which free tools run the course â€" and where does each artefact live?	"Canva for slides, OBS for recording, YouTube (unlisted) for hosting, Google Forms for the quiz, Google Classroom for the assignment, WhatsApp for the community, Zoom for the live Q&A."
6. Schedule and session length	When does each lesson happen, and how long is it?	"Lessons 1â€"3 in Week 1, Lessons 4â€"5 in Week 2, live Q&A at the end of Week 2. Each recorded lesson is 8â€"12 minutes; the live Q&A is 30 minutes."
7. Assessment plan	How do you know learning happened â€" and how do you support the learner who struggles?	"A 5-question auto-graded quiz after Lesson 3, an assignment ('photograph your finished skirt') marked with a rubric, feedback using the specificâ€"kindâ€"next-step frames, and the two-part support plan from Session 5."
8. Ethics note	What data do you collect, how do you store it, how do you get consent, and how do you handle minors and copyright?	One paragraph. "I collect only a name and an email. Material is stored in a private Drive folder. I ask consent before recording or publishing anything. All material is my own or free to use; I credit free material. For learners under 18, a parent or guardian consents before enrolment and before any image is used."

The two tests of a good outline. Read your finished outline twice:

- **The coverage test:** every outcome has a lesson that teaches it, and every lesson has an outcome. If a lesson has no outcome, cut it or give it one. If an outcome has no lesson, you have promised something you do not teach.
- **The stranger test:** hand your outline to someone who knows nothing about your course. Can they tell you who it is for, how it runs, what the learner learns, and how you know they learned it? If they cannot, the outline still has holes.

Worked example â€" Ngozi's complete one-page outline:

> ***MINI-COURSE OUTLINE â€" NGOZI OKPARA, STYLE WITH NGOZI***
>
> ***1. Title:*** *Sewing Basics: Cut and Sew Your First A-Line Skirt.*
>
> ***2. Target learner:*** *A complete beginner â€" usually a young woman in her twenties or thirties â€" who owns or can borrow a sewing machine and has never cut a pattern. She may be in Port Harcourt, Lagos, Abuja or abroad (my cousin in Toronto is my sanity check). She learns mainly from her phone, sometimes on mobile data, so lessons must be short and files small.*

3. Delivery mode and why: *A cohort course â€" five recorded lessons released across two weeks, plus one live Q&A on Zoom in Week 2. Recorded lessons let learners in different cities and time zones learn at their own pace and replay tricky parts; the live Q&A fixes the one thing recordings cannot, which is answering a learner's specific question in front of everyone.*

4. Five lessons and outcomes:

- ***Lesson 1 â€" Take and record your three body measurements.*** *Outcome: The learner takes her bust, waist and hip measurements and records them accurately in a measurement chart.*
- ***Lesson 2 â€" Choose and prepare your fabric.*** *Outcome: The learner selects the right fabric and thread for an A-line skirt and prepares it for cutting.*
- ***Lesson 3 â€" Cut your pattern pieces.*** *Outcome: The learner cuts the front and back skirt pieces from her fabric using her own measurements.*
- ***Lesson 4 â€" Sew the seams, insert the zip and hem.*** *Outcome: The learner sews the side seams, inserts the zip and hems the skirt using the demonstrated stitches.*
- ***Lesson 5 â€" Fit, press and review your finished skirt.*** *Outcome: The learner fits the skirt, presses it and reviews it against a simple quality checklist.*

5. Free tools used: *Canva (free) for slides; OBS Studio for recording; YouTube (unlisted) for hosting; Google Forms for the quiz; Google Classroom for the worksheet and assignment; WhatsApp for the learner group; Zoom (free) for the live Q&A. No paid subscription is used at any point.*

6. Schedule and length: *Week 1 â€" Lessons 1, 2 and 3 (one every two or three days, each 8â€"12 minutes). Week 2 â€" Lessons 4 and 5, then the live Q&A (30 minutes). Learners get a WhatsApp reminder before each release.*

7. Assessment plan: *A 5-question auto-graded Google Forms quiz after Lesson 3 (questions mapped to the outcomes, answer key with acceptable alternatives). An assignment in Google Classroom: "Photograph your finished skirt and submit it with your measurement chart," marked with the 4-criterion rubric from Session 5. Feedback is given privately using the specificâ€"kindâ€"next-step frames. The Session 5 support plan (private message, extra time, alternative task, catch-up path) applies to any learner who goes quiet.*

8. Ethics note: *I collect only a learner's name and email address â€" the minimum needed to run the class. I store the class list, grades and recordings in a private Google Drive folder, never in a public post. I tell every learner before the live Q&A that it will be recorded, and I offer an alternative to anyone who objects; the recording is unlisted, not public. All course material is my own or free to use; I credit any free material in the lesson description. For learners under 18, I obtain consent from a parent or guardian before enrolment and before any recording or image is used, and I never message a minor privately one-to-one without a guardian knowing.*

Say this to the class:

> *"One page. Eight parts. Notice what Ngozi did â€" she did not write eight essays. She wrote eight specific answers. 'Cohort' is a mode; 'cohort because my learners are in different cities and on different data budgets' is a defence. 'A quiz' is an idea; 'a 5-question auto-graded quiz after Lesson 3, mapped to outcomes, with an answer key that accepts spelling variations' is a plan. Vague answers are what you wrote in Week 1. Specific answers are what you write today."*

Common misconception. "The outline is just paperwork I must finish." No â€" the outline is the **map of your defence**. Every viva question â€" Why this mode? How do you keep people engaged? How do you know they learned? What about ethics? â€" is answered by pointing at a section of this page. The learner who fills the outline carefully is 80% prepared for the viva already.

F.3 Preparing the 5â€"10 minute mini-lesson â€" recorded or live

The idea. A mini-lesson is one real lesson from your course, delivered start to finish in 5â€"10 minutes. It is not a trailer, not a summary of the whole course, and not a lecture about teaching â€" it is a real lesson a real learner could actually learn from. You choose **one** lesson â€" usually the one you know best â€" and you deliver it properly.

Recorded or live â€" the decision. Both are accepted. Choose on purpose, not by accident:

Choose	ifâ€¦	Choose	ifâ€¦
Your subject benefits from close-ups, demos and editing (sewing, cooking, phone repair, makeup).		Your subject benefits from real-time questions and discussion (exam prep, Bible study, coaching).	
Your home internet is slow or unstable â€” you can record in short takes.		You want to prove live facilitation skill â€” polls, chat, hand raise, handling latecomers.	
Your learners are in different time zones (Ngozi has a cousin in Toronto).		Your learners are all in the same time zone and can attend one slot.	
You are nervous â€” recording lets you stop, breathe and retake.		You are confident on camera and enjoy thinking on your feet.	

Whichever you choose, the lesson needs four things:

1. **A clear opening tied to an outcome.** The first 30â€“45 seconds must do three jobs: get attention (a question, a problem, a promise â€" "By the end of this lesson, you will have taken your three measurements and written them down"), state the outcome in plain words, and say why the learner should care ("because every skirt you ever sew starts with these three numbers").
2. **At least one piece of learning content.** Real teaching â€" a demonstration, an explanation, a worked example, a story with a point. For a recorded lesson, this is where your slides, your hands, your whiteboard or your screen share do the work.
3. **A moment of learner interaction or practice.** The learner must *do* something, not just watch. In a recorded lesson this is a planned pause: "Pause the video now and take your own three measurements. Write them in the worksheet. I will wait." In a live lesson this is a chat prompt, a poll, a show of hands or a quick pair task. Put the pause **in the plan** â€" a moment you did not plan will not happen.
4. **A closing check for understanding.** The last 60â€"90 seconds must check that the outcome was met: "Check your chart â€" do you have three numbers, in centimetres, with the right ranges? If your waist is smaller than your bust, something went wrong â€" re-measure. Post your chart in the WhatsApp group or submit it in Classroom. Next lesson: choosing your fabric."

The timed plan â€" the mini-lesson's skeleton. Every strong mini-lesson has timings written down before delivery. Here is Ngozi's 7-minute plan for Lesson 1:

Time	Segment	What happens
0:00â€"0:45	Opening	Greets the learner, states the outcome ("By the end of this lesson you will have taken and recorded your three body measurements"), shows the finished skirt for thirty seconds as the reason to care.
0:45â€"2:30	Input â€" the three measurements	Explains bust, waist and hip with the tape measure and the dress form; names the common mistakes (tape too tight, measuring over thick clothes, writing numbers down wrong).
2:30â€"4:30	Demonstration	Measures the dress form on camera, slowly, narrating each number and writing it in the chart; then shows a filled chart and what a good one looks like.
4:30â€"5:45	Practice moment	"Pause the video now. Take your own three measurements and write them in the worksheet I sent you. It takes about ten minutes. I will wait â€" pause the video." (In the recording, a quiet 30-second hold with on-screen text, then:) "Welcome back."
5:45â€"6:30	Check for understanding	Reads three model numbers and asks the learner to compare: "Is your waist smaller than your bust? Re-measure. Do you have all three numbers in centimetres? If not, fix them now."
6:30â€"7:00	Close	Recaps the outcome, previews Lesson 2 (fabric), gives the task: "Submit your chart in Classroom by Friday." Total: 7 minutes.

Scripted, semi-scripted, or cue cards? For a recorded lesson, **script the opening and the outcome word for word** â€" they carry the most weight and cannot be improvised well under nerves. Script the demonstration as bullet points (the steps in order), not full sentences â€" you will sound like a person, not a reader. For a live lesson, use **cue cards**: the timings, the opening sentence, the three key points, the practice prompt, the closing check. Never read a script on camera; the learner can feel it.

The recording checklist (for a recorded mini-lesson):

- Quiet corner, household warned, phone on silent, door closed.
- Natural light from a window in front of you, not behind you (light on your face, not your silhouette).
- Phone charged, storage cleared, **landscape** (sideways) for anything with slides or demos.
- Earphones with the mic close to your mouth â€" this one free upgrade does more than any other.
- Record a 30-second test, watch it with sound, check audio first, then light, then framing.
- Record in short takes (opening take, demo take, close take) â€" you will edit out the dead silences and the "umms" later, or simply leave a natural pause.
- Keep the file small: export at the lowest acceptable quality, compress if needed, and remember the learner may be on mobile data. Offer the slides as a PDF alongside the video for learners who cannot stream.
- Host as **unlisted** on YouTube (or share the file directly in Classroom) â€" never public.

The live rehearsal checklist (for a live mini-lesson):

- Test screen share, audio and camera **before** the session; have the fallback plan from Session 4 ready (fresh link by WhatsApp, phone dial-in).
- Open the room early, state three norms, state the outcome on a slide.
- Run the timed plan: opening, input, practice prompt (poll or chat), close. Keep one eye on the clock and one on the chat.
- Leave a 2-minute technical buffer â€" if the demo fails, the plan survives.

Say this to the class:

> *"Seven minutes is not short. In seven minutes you can state an outcome, teach one thing, make the learner do one thing, and check that it landed. Most online lessons fail not because seven minutes is too little, but because forty minutes is spent on everything except those four jobs. Plan the four jobs. Time them. Then record or deliver. That is the whole craft."*

F.4 Presenting and defending your design â€" the viva

The idea. A design you cannot explain is a design you do not own. The defence (the viva) is a short spoken conversation â€" five to ten minutes â€" where you present your outline and mini-lesson and answer questions about the choices you made. It is not an interrogation; it is the proof that the thinking is yours.

The five standard viva questions (these are the ones to prepare):

1. **Why this mode and these outcomes?** â€" Point to Part 3 and Part 4 of your outline. Name the mode, then name the reason that connects to your real learner: "Cohort, because my learners are in different cities and on different data budgets â€" recorded lessons let them learn anywhere, and the live Q&A fixes what recordings cannot."
2. **How does the lesson keep learners engaged?** â€" Point to your mini-lesson plan. Name the practice moment and the rhythm: "The lesson states the outcome in the first 45 seconds, demonstrates once, then makes the learner pause and take their own measurements â€" something asked or done well inside the eight-minute rule. In the live Q&A I add a poll and a breakout task."
3. **How would you know learning happened?** â€" Point to Part 7 of your outline: "The 5-question quiz maps to the outcomes and auto-grades; the assignment is marked with the rubric; the closing check in the lesson catches the learner whose measurements are wrong before they cut fabric."
4. **What did you do about accessibility, low data, copyright and privacy?** â€" Point to your content choices and Part 8: "Slides use large type and high contrast; the video is compressed and the slides are offered as a PDF for learners who cannot stream; all material is my own or free to use and credited; I collect only a name and an email, and the recording is unlisted with consent."
5. **What would you change after your first real run?** â€" The honest answer every examiner loves: "I would watch where learners pause and rewatch, read the quiz responses for questions they all got wrong, and adjust those two things first â€" assessment tells me what to fix."

The defence technique â€" point to evidence. Every answer follows one shape: **claim â†' evidence â†' reason.** "I chose a cohort mode (claim) because my outline's target learner learns from her phone, possibly on data (evidence), and recorded lessons plus one live session fit that life best (reason)." A vague answer floats; an answer with evidence lands. Practise saying each answer out loud at least twice â€" spoken answers that were only ever thought sound different from spoken answers that were spoken.

The peer feedback â€" one strength, one next step. After each presentation, the class gives two things: **one strength** ("your practice moment was clear and well-timed") and **one next step** ("state the outcome on a slide as well as speaking it, so latecomers catch it"). This is not marking â€" it is the habit of a professional: every piece of work gets one thing praised and one thing improved.

Saying "I don't know." If a question genuinely stumps you, the honest move is: "I have not thought about that â€" my current plan would be X, and I would test it." Examiners mark honesty and reasoning higher than a confident guess. The ethics rule applies here too: do not invent learner numbers, results or testimonials to impress â€" ever.

Say this to the class:

> *"The viva feels like a test, but it is a conversation about work you already did. You are not defending a stranger's choices â€" you are explaining your own. Point to the artefact. Name the reason. That is the whole skill. And it is the skill employers actually ask for: 'Walk me through how you built this and why.'"*

F.5 The certificate, honestly â€" and life after this course

The idea. At the end of this session you have earned something real â€" and real things deserve honest words. The CEA Certificate in Online Teaching certifies exactly this: that you can **design and deliver a short, structured online lesson using free tools**. It means you understand modes and platforms, can write measurable outcomes and a curriculum map, can build slides, short videos, worksheets and quizzes in free tools, can run a live online session with genuine participation, can assess and give useful feedback, and do all of it with privacy, safeguarding and copyright in mind.

What it does not mean. It does not make you a government-recognised teacher, a qualified teacher of record, a licensed lecturer or an accredited institution. It does not replace an NCE, a B.Ed or a PGDE for those who need one. It does not certify deep knowledge of the subject you teach â€" only of the online delivery craft. And it does not guarantee income, students or business success. Anyone who sells a two-week course with a earnings promise is not being honest. What we will say â€" and mean â€" is this: a graduate can sit down today with a phone and a free account and build something a learner can actually use. That is a genuine, verifiable, employable starting skill.

Verification. Certificates can be verified at **cea.ng/certificates/verify**. Graduates should quote their certificate reference whenever they share it, so employers, schools and clients can check it.

Where to go from here. The capstone is the first item in a teaching portfolio. From here: teach the course for real (even free, to five friends) and collect honest feedback; iterate on the two things the data shows; then consider advanced CEA work â€" longer course design, video production, facilitation, running a paid cohort. Each taught course makes the next one better.

Say this to the class:

> *"You came in with a subject you know. You are leaving with a craft you can prove. That is what this academy promises, and it is what your certificate will say â€" no more, and no less."*

F.6 Summary of the lecture

- **The capstone is assembly** â€" your five artefacts become one outline, one lesson, one defence.
- **The outline has eight parts** â€" title, target learner, mode and why, five lessons with outcomes, tools and schedule, assessment plan, ethics note â€" and passes two tests: coverage and the stranger test.
- **The mini-lesson has four jobs** â€" opening tied to outcome, real content, a practice moment, a closing check â€" planned with timings, delivered recorded or live.
- **The defence is evidence** â€" claim, evidence, reason â€" for five standard questions, with honest "I don't know"s.
- **The certificate is honest** â€" it certifies the craft, not a qualification, and it can be verified.

Key concept diagram:

```

    A[Mini-course outline] --> B[Record mini-lesson] --> C[Rehearse] --> D[Present & defend] --> E[CEA Certificate]
```

G. INSTRUCTOR DEMONSTRATION (15 minutes)

Goal: Walk the class through a **finished** capstone â€" Ngozi's outline, her 7-minute recorded mini-lesson, and her defence â€" so learners see the complete result before they build their own. Narrate the *decisions*, not just the artefacts.

Setup: Project the finished outline (Section F.2). Have the recorded mini-lesson ready to play (or the timestamped walkthrough in Section F.3). Have the defence answers written on a slide or card.

G.1 Step 1 â€" Present the finished outline (4 minutes)

Say: "This is Ngozi's whole course on one page. Watch how fast I can prove it works."

Read the outline aloud, section by section, and for each section **point to the artefact behind it**:

- Mode and why â†' "Her Session 1 decision card said exactly this â€" cohort, recorded plus live â€" because learners are in different cities."
- Five lessons with outcomes â†' "Her Session 2 outcomes, copied across, one per lesson."
- Tools â†' "Every tool here is free â€" Canva, OBS, YouTube unlisted, Forms, Classroom, WhatsApp, Zoom."
- Assessment plan â†' "Her Session 5 quiz, rubric and support plan, summarised in three lines."
- Ethics note â†' "Her Session 5 ethics answers, shaped into one paragraph."

Say: "Notice: I did not write new content. I **assembled** old content. That is your job in the next eighteen minutes."

G.2 Step 2 â€" Play the recorded mini-lesson and narrate its structure (6 minutes)

Say: "Ngozi's mini-lesson is Lesson 1 â€" 'Take and record your three body measurements' â€" recorded in OBS, hosted unlisted on YouTube, seven minutes long. Watch for the four jobs, not the sewing."

Play the recording (or walk through the timestamped plan if no video is available). Pause at each job and name it:

- **0:00â€"0:45 â€" Opening tied to the outcome:** "She says the outcome in plain words and shows the finished skirt â€" the reason to care."
- **0:45â€"2:30 â€" Content:** "The three measurements, explained and demonstrated, with the common mistakes named."
- **2:30â€"4:30 â€" Demonstration:** "She measures on camera and fills the chart slowly â€" the learner sees a good chart before making their own."
- **4:30â€"5:45 â€" Practice moment:** "She tells the learner to pause and take their own measurements. The interaction is planned, not accidental."
- **5:45â€"6:30 â€" Closing check:** "She reads three model numbers and gives the learner a way to self-check â€" waist smaller than bust means re-measure."
- **6:30â€"7:00 â€" Close and next step:** "Recap the outcome, preview Lesson 2, give the task."

Say: "Seven minutes, four jobs, one outcome. Nothing else is in there â€" and that is why it works. When you plan your own, write the four jobs with timings before you record a single minute."

G.3 Step 3 â€" Walk the defence live (4 minutes)

Say: "Now the viva. Five questions, claimâ€"evidenceâ€"reason. Watch how each answer points at the outline or the lesson."

Model the answers aloud (abbreviated here; full models in Section I):

1. **Why this mode and these outcomes?** "Cohort, recorded plus one live Q&A, because my learners are in different cities and on different data budgets â€" outline Part 3. The outcomes are action verbs from Session 2 â€" each one is taught in one of the five lessons and checked in the quiz or assignment â€" Part 4 and Part 7."
2. **How do you keep learners engaged?** "The lesson has a planned pause at 4:30 where the learner takes their own measurements â€" inside the eight-minute rule. The live Q&A adds a poll and a breakout task â€" Session 4's engagement plan."

3. **How would you know learning happened?** "The auto-graded quiz maps to the outcomes, the closing check catches wrong measurements, and the rubric marks the finished skirt â€" Part 7."
4. **Accessibility, low data, copyright, privacy?** "Large type, high contrast, compressed video, PDF slides for weak data; all material my own or free and credited; name and email only; unlisted recording with consent â€" Part 8 and the content pack."
5. **What would you change?** "I would watch where learners rewatch the video, fix the two quiz questions they all got wrong, and shorten the demonstration by thirty seconds."

Say: "Five questions, five answers, five pieces of evidence. That is the whole defence. You will write your own in the next fifteen minutes."

G.4 The finished capstone â€" the folder (1 minute)

Open the folder `CEA-OT-NgoziOkpara` on the projector and show its contents:

> ***NGOZI'S CAPSTONE FOLDER***
>
> - `01_Decision_Card.docx` *â€" Session 1*
> - `02_Outcomes_Map_LessonPlan.docx` *â€" Session 2*
> - `03_Content_Pack` *â€" slides, 60â€"90s clip, worksheet, copyright checklist*
> - `04_Engagement_Plan.docx` *â€" Session 4*
> - `05_Quiz_Rubric_Feedback_Support.docx` *â€" Session 5*
> - `06_Mini-Course_Outline.docx` *â€" today*
> - `07_Mini-Lesson_Plan.docx` *â€" today*
> - `08_Mini-Lesson_Video.mp4` *(unlisted link) â€" today*
> - `09_Defence_Answers.docx` *â€" today*

Say: "Nine files. Sessions 1â€"5 gave you five of them. Today you make the last four. The folder is the evidence â€" keep it, because this is your first portfolio."

Questions to ask during the demo:

- "Which section of the outline answers 'why this mode'?" (Part 3.)
- "Where is the practice moment in the lesson?" (The 4:30 pause â€" planned on the timed sheet.)
- "What makes the defence answer strong?" (It points to an artefact.)
- "What would you add if a learner watched this on a small phone with bad data?" (PDF slides, compressed video â€" already planned.)

Expected result: Learners see that a finished capstone is not a mystery â€" it is a closed folder with nine files, every one of which they already know how to make. They now have a complete model to copy in structure (not in content).

H. GUIDED PRACTICAL EXERCISE (18 minutes)

Objective: With the instructor guiding, each learner **assembles their complete one-page mini-course outline** from their existing artefacts, using Worksheet 6.1.

Starting materials: Your working folder (Sessions 1â€"5 artefacts); Worksheet 6.1; a pen or Google Docs.

Procedure (instructor calls out each step; learners follow; instructor walks the room):

1. Open Worksheet 6.1. Write your **course title** â€" specific, plain, no cleverness.
2. Write your **target learner** â€" who exactly, and what they already know. (Say it out loud to yourself: "My course is for _____ who already _____.")
3. Write your **delivery mode and one reason** â€" copy the decision from your Session 1 card, and add the "because" if it is missing.
4. Write your **five lessons, each with one outcome** â€" copy from your Session 2 outcomes. Check: five lessons, five outcomes, action verbs.

5. List your **free tools** â€" the ones you actually used, one line each.
6. Write your **schedule and length** â€" which lessons in which week, how long each lesson is.
7. Write your **assessment plan in three lines** â€" quiz (what, when, how marked), assignment (what, marked with what), feedback (how given), support (what happens when a learner goes quiet).
8. Write your **ethics note** â€" one paragraph: what data you collect, where it lives, consent, minors, copyright.
9. **Run the two tests:** coverage (every outcome has a lesson; every lesson has an outcome) and the stranger (can a stranger tell who, how, what and how-you-know?).
10. **Pause and predict:** "Which viva question is your weakest right now? Mark that section â€" you will strengthen it in the independent exercise."

Expected result: A complete, assembled one-page outline with all eight parts filled in.

Points to pause on and predict:

- After step 4: "Who has a lesson with no outcome, or an outcome with no lesson? Fix it now â€" that is the coverage test."
- After step 8: "Read your ethics note â€" does it name what data you collect and how you get consent? If not, add one sentence each."

Troubleshooting while walking the room:

- "I don't have five lessons." â†' "You wrote five outcomes in Session 2. If your course genuinely has fewer lessons, that is fine â€" the design doc says five lessons for the standard capstone; if yours is three, say so plainly in the outline and keep every outcome taught. Fewer, honest lessons beat five padded ones."
- "My mode reason is missing." â†' "Look at your target learner. What in their life â€" city, data, time, device â€" makes your mode the right one? That sentence is the reason."
- "My assessment plan is blank." â†' "You built a quiz and rubric last session. Summarise them in three lines â€" 'what, when, how marked' â€" that is the plan."
- "My ethics note is one line." â†' "Add the two sentences: what you collect, and that all material is your own or free. Two honest sentences are enough."

Completion checklist (learner ticks each):

- ☐ Course title is specific and plain
- ☐ Target learner named, with what they already know
- ☐ Delivery mode named, with one clear reason
- ☐ Five lessons, each with one measurable outcome (action verbs)
- ☐ Free tools listed â€" one line each
- ☐ Schedule and session length written
- ☐ Assessment plan in three lines (quiz, assignment, feedback + support)
- ☐ Ethics note: data, storage, consent, minors, copyright
- ☐ Coverage test passed: every outcome has a lesson; every lesson has an outcome
- ☐ Stranger test passed: a stranger could tell who, how, what and how-you-know

Success criteria: The outline is complete, internally consistent, and every artefact from Sessions 1â€"5 is represented in it. A learner who can tick every box above is ready for the independent exercise and the viva.

I. INDEPENDENT CLASS EXERCISE (15 minutes)

Task (new task, done alone): Prepare the **delivery half** of your capstone. Using Worksheet 6.2, write the **timed plan** for your 5â€"10 minute mini-lesson, choose recorded or live with one reason, and write **spoken answers to two defence questions** on Worksheet 6.3.

Scenario. You are days away from presenting your capstone. Your outline is assembled (Section H). Now you prepare what you will actually *do* in front of the class or camera â€" and what you will *say* when asked about it. One lesson, timed to the minute; two answers, spoken aloud before you write them.

Requirements:

1. **Choose your lesson and your mode.** Pick one lesson from your outline (the one you know best). Choose **recorded** or **live** and write one reason.
2. **Write the timed mini-lesson plan** (Worksheet 6.2): the four jobs â€" opening tied to outcome, content, practice moment, closing check â€" each with a time. Total must be **5â€"10 minutes**.
3. **Write two spoken defence answers** (Worksheet 6.3), each 3â€"5 sentences, using claimâ€"evidenceâ€"reason:
    - **Answer 1:** "Why this mode and these outcomes?"
    - **Answer 2:** "How would you know learning happened?"
4. **Speak both answers aloud** once â€" to yourself, to your phone, or to a partner. If it takes longer than 90 seconds to say, shorten it.

Time allowance: 15 minutes.

Success criteria:

- Timed plan totals 5â€"10 minutes, with all four jobs present.
- Recorded or live chosen, with one reason.
- Two defence answers written, each naming at least one artefact as evidence.
- Both answers spoken aloud at least once.

Hints if stuck:

- Hint 1: Start the plan with the practice moment â€" "at minute ___, the learner does ___." Build the rest of the timings around it.
- Hint 2: For the defence, point to your folder: "my Session 5 quiz maps to the outcomes" is already half an answer.
- Hint 3: If 10 minutes feels impossible to fill, you probably have too much content â€" cut to one outcome, one demonstration, one practice.

INSTRUCTOR ANSWER KEY (model solution â€" do not show learners):

> ***Model timed mini-lesson plan â€" Ngozi, Lesson 1 (recorded, 7 minutes):*** *As in Section F.3: Opening 0:00â€"0:45 (outcome stated, reason to care); Input 0:45â€"2:30 (three measurements explained); Demonstration 2:30â€"4:30 (measures the dress form, fills the chart); Practice 4:30â€"5:45 ("pause the video and take your own three measurements"); Closing check 5:45â€"6:30 (compare against model numbers); Close 6:30â€"7:00 (recap, preview, task). Mode: recorded, because the subject benefits from close-ups and editing, and her learners are in different cities and time zones.*
>
> ***Model defence answer 1 â€" "Why this mode and these outcomes?"*** *"I chose a cohort mode â€" five recorded lessons plus one live Q&A â€" because my target learner learns from her phone, sometimes on mobile data, and may be in Lagos, Abuja or abroad; recorded lessons let her learn anywhere and replay, and the live session answers her specific questions. The outcomes are the five action-verb outcomes from my curriculum map, one per lesson â€" for example, 'the learner takes her bust, waist and hip measurements and records them accurately.' Each outcome is taught in its lesson and checked in the quiz or the assignment, so the promises in the outline are kept by the course."*
>
> ***Model defence answer 2 â€" "How would you know learning happened?"*** *"Three ways, all in my assessment plan. First, the lesson itself closes with a self-check â€" the learner compares her measurements against model numbers and re-measures if something is wrong. Second, a 5-question auto-graded quiz after Lesson 3 maps one question to each outcome, so I see instantly which outcome is weak. Third, the assignment â€" 'photograph your finished skirt' â€" is marked with the four-criterion rubric, so the final product is checked against the standard, not against my mood."*
>
> ***Learner marking (out of 10):***
>
> - *Timed plan totals 5â€"10 minutes with all four jobs (3)*
> - *Recorded or live chosen with one reason (1)*
> - *Defence answer 1: mode + outcomes, with evidence (2)*
> - *Defence answer 2: assessment evidence, with at least two checkpoints named (2)*
> - *Answers spoken aloud and fit 90 seconds each (1)*
> - *Plan is genuinely usable â€" a stranger could deliver from it (1)*

J. REAL-WORLD CASE STUDY

Situation. Two weeks after enrolling, Ngozi Okpara sits at her kitchen table in Port Harcourt with a folder full of work and a deadline: her capstone mini-lesson, to be presented and defended in the final session. She has everything â€” five lessons of content, a quiz, a rubric, a worksheet. But three problems are staring her down. Her first attempt at recording Lesson 1 came out at fourteen minutes of rambling. The video file is 700 megabytes, and she knows her learners in Lagos are on mobile data. And when she tries to say her design choices out loud â€” "why cohort, why these outcomes" â€” her mind goes blank. She is one session away from the certificate, and she is seriously considering giving up and saying the course "was not for her."

Relevant facts.

- Ngozi is a strong teacher in her shop â€” her six apprentices learn well from her. The subject is not the problem.
- Her first recording was one continuous take: no plan, no timings, no pause for the learner to practise. Fourteen minutes of her talking.
- The 700MB file came from recording at full quality on her laptop's built-in recorder. She does not yet know about compressing, or about offering PDF slides as a low-data alternative.
- She has never once said her design choices out loud. She *knows* them â€” she has been making them for five sessions â€” but knowing and explaining are different skills.
- Her cousin in Toronto is waiting to watch Lesson 1 tonight.

Decision point. Ngozi's capstone is at risk â€” from length, from file size, and from silence. What should she do?

Possible approaches.

1. **Give up** â€” "Online teaching is not for me. I am a shop teacher, not a computer person."
2. **Submit the fourteen-minute video anyway** â€” "It covers everything. Longer must be better."
3. **Fix all three problems with the tools she already has** â€” re-record against a timed plan, compress the file and offer PDFs, and practise the defence aloud.

Recommended solution. Approach 3. The problems are not in Ngozi â€” they are in the preparation, and every one of them has a free, twenty-minute fix. "Online teaching is not for me" is the conclusion she would draw from one bad recording, and it would be false. She has taught six apprentices for years; she simply has not yet *designed* for a camera. The course has given her everything she needs â€” she only needs to use it properly.

The fix (what Ngozi did, in one evening):

- **Re-recorded against the timed plan.** She wrote the four jobs with times â€” opening 45 seconds, input 2 minutes, demonstration 2 minutes, practice pause, closing check, close â€” and recorded in three short takes. The result: 7 minutes, 20 seconds. Cutting seven minutes of rambling was not a loss; it was the lesson finally being *designed*.
- **Shrunk the file and planned for weak data.** She exported at 720p instead of full quality, compressed the file to under 150MB, and uploaded the slides as a PDF in Classroom with a note: "If your data is weak, read the PDF and watch the video on Wi-Fi." Low-data design is not an afterthought â€” it is respect for the learner's reality.
- **Practised the defence out loud â€” badly, then less badly.** She answered the five viva questions into her phone's voice notes, listening back and wincing. The first attempt was two minutes of "um." The second was 90 seconds of claimâ€"evidenceâ€"reason. The third, to her cousin on WhatsApp audio, was the one. Her cousin asked "why not just live?" â€” and Ngozi answered without notes: "Because you are in Toronto and my Lagos learners are on data â€” recorded lets everyone learn, and live fixes what recordings cannot."

The result: Ngozi presented her mini-lesson in the final session, answered four viva questions cleanly, and received her CEA Certificate in Online Teaching. Her cousin in Toronto watched the lesson that week. Her first real cohort â€” twelve learners in four cities, paying â‚¦4,500 each â€” started the following month. And she kept the folder. Nine files, every one a record of a decision she could explain.

Trade-offs. The re-record cost her one evening â€” the same evening the course asks every learner to invest. She could have submitted the fourteen-minute version and scraped a pass; she chose the version her learners could actually use. She also faced a humbling truth: explaining your work out loud is a separate skill from doing the work, and it only improves by doing it badly first. Every professional knows this. Beginners rarely get the chance to learn it safely â€” that is what the capstone's defence is for.

Professional connection. This is the pattern behind every real course launch: **plan with timings, design for the learner's constraints, and be able to explain every choice.** The instructors who thrive online are not the ones with the best cameras â€”

they are the ones whose decisions are deliberate and whose evidence is a folder they can open. Ngozi's folder is now her portfolio. Yours will be too, by the end of today.

K. COMMON MISTAKES AND TROUBLESHOOTING

Use this table as the live guide during the practicals and the viva. Point learners to the row rather than giving the answer.

Mistake	Why it happens	How to fix it
Outline has blank or vague boxes ("Mode: online. Assessment: a quiz.")	The learner filled the template fast to "finish" instead of transferring specific content from artefacts.	Ask: "Which artefact holds the detail?" Copy the real decision, outcome and quiz plan across â€" one specific sentence per box beats three vague ones.
A lesson with no outcome, or an outcome with no lesson	The outline was written from memory, not from the Session 2 curriculum map.	Run the coverage test line by line. Every outcome must point at a lesson; every lesson must point at an outcome.
Mini-lesson runs 12â€"15 minutes	The learner planned content, not timings â€" and recorded everything in one take.	Write the four jobs with times first; record in short takes; cut until the total fits 5â€"10 minutes. Longer is not better â€" tighter is better.
No practice moment â€" the learner only watches	The learner forgot that online silence is a design failure, not a learner problem.	Insert one planned pause: "pause the video and try it now" (recorded) or a poll/chat prompt (live). A moment you did not plan will not happen.
Reading slides or a script on camera	The learner wrote a full script to feel safe, then read it.	Script only the opening and the outcome word for word. Everything else: bullet points on cue cards. The learner can feel the difference.
Video file is huge (500MB+)	Full-quality export, no compression â€" and no thought for the learner	Export at 720p, compress the file, host unlisted, and offer the slides as a PDF for weak-data learners.

Mistake	Why it happens	How to fix it
	on mobile data.	
Defence answers float with no evidence	The learner answered from memory instead of pointing at artefacts.	Use claimâ€"evidenceâ€"reason every time: "I chose cohort (claim) because my learner is on data in another city (evidence), and recorded lessons fit that life (reason)."
"I don't know" becomes a shrug	The learner never practised saying the honest answer.	Teach the honest formula: "I have not decided that yet â€" my current plan would be X, and I would test it." Honesty plus reasoning beats a confident guess.
Ethics note missing or one line	The learner treated ethics as an add-on, not a design decision.	The note names five things: what data you collect, where it lives, consent before recording, care with minors, and copyright. Two honest sentences each for data and copyright; one for consent; one for minors.
Over-claiming in the defence ("This course will make you a professional tailor")	The learner is nervous and reaches for impressive words.	Bring it back to the honest promise: "This course teaches a beginner to cut and sew her first A-line skirt â€" that is what it does, and that is what the certificate says."
Everything left to the last hour	The capstone felt like one big deadline instead of an assembly.	The folder is the defence: every artefact already exists. Assemble the outline first (Section H), then plan the lesson (Section I), then practise the defence aloud. Three small jobs, not one mountain.

Distinguish likely vs confirmed: A "likely cause" becomes confirmed only after you check it â€" for example, the learner can actually point at the blank box, or actually play the lesson and show there is no practice moment. Teach learners to confirm before concluding, and to fix the confirmed cause, not the guessed one.

L. SESSION ASSIGNMENT

Assignment title: "My Capstone Pack â€" Outline, Mini-Lesson and Defence"

> ***Timing note (read this first):*** *The in-class component of this session is assembly, planning and rehearsal. The full capstone package is due within 72 hours after Session 6. Viva presentations are booked in 5-minute slots on days after*

Session 6 â€" your slot will be assigned at the end of Session 5.

Purpose: To complete the certificate evidence: a finished one-page mini-course outline, a delivered 5â€"10 minute mini-lesson (recorded and hosted free, or rehearsed for live delivery), and a written defence of the design choices. This is the final assembly of everything built across Sessions 1â€"5 â€" and the first item in the learner's teaching portfolio.

Realistic scenario. You are Ngozi Okpara â€" or you are yourself, with your own real or approved fictional course. Your folder has five sessions of work. Your learners are waiting. Your job this week: assemble the outline, deliver one real lesson, and be ready to explain every decision you made.

Detailed instructions:

1. **Finalise your one-page outline** (Worksheet 6.1) â€" all eight parts, specific, with the coverage and stranger tests passed.
2. **Prepare your 5â€"10 minute mini-lesson** â€" one lesson from your outline:
   - **If recorded:** record with OBS or your built-in recorder, using the timed plan and the recording checklist; compress the file; host as an **unlisted** YouTube video (or share directly in Classroom); offer the slides as a PDF for weak-data learners.
   - **If live:** rehearse against the timed plan with cue cards; test screen share, audio and camera; prepare the fallback plan (fresh link by WhatsApp).
3. **Write your defence** â€" spoken answers (3â€"5 sentences each, claimâ€"evidenceâ€"reason) to at least **three** of the five standard viva questions (Section F.4). Each answer must name at least one artefact as evidence.
4. **Do a final ethics check** â€" read your outline's ethics note against the five rules one last time: minimum data, safe storage, consent, minors, copyright. Fix anything missing.
5. **Keep the folder whole** â€" `CEA-OT-FirstnameLastname`, nine files, every artefact named and dated.

Required deliverables:

- The final one-page mini-course outline (Google Doc, shared or printed).
- The mini-lesson: an unlisted video link, or a live delivery slot booked with the instructor.
- The timed mini-lesson plan (showing the four jobs and the total of 5â€"10 minutes).
- Written answers to at least three viva questions (300â€"500 words total).
- The complete working folder (Sessions 1â€"6).

Submission format: Save as `Capstone_YourName` (a folder or a single PDF with the link inside) and upload to `/Online-Teaching/Week2/Capstone/`. Include the unlisted video link. If delivering live, confirm your viva slot with the instructor.

Deadline: Within 72 hours of Session 6 â€" before your scheduled viva slot. The viva itself completes the assessment.

Session 6 Practical Rubric (10 marks) â€" separate from the Capstone Rubric (30 marks, Part 6):

Criterion	Marks	Description of a strong answer
Outline complete and specific	2	All eight parts filled with specific, artefact-backed content â€" no vague boxes
Outline internally consistent	1	Coverage test passed: every outcome has a lesson; every lesson has an outcome
Mini-lesson within 5â€"10 minutes with the four jobs	2	Timed plan shows opening, content, practice moment, closing check; delivery matches the plan
Mode and tools justified	1	Recorded or live chosen with a reason; free tools listed and actually used
Defence answers with evidence	2	Three answers, each claimâ€"evidenceâ€"reason, each naming an artefact
Ethics note complete	1	Data, storage, consent, minors, copyright â€" all five covered honestly
Folder complete and organised	1	Nine files, named and dated; every artefact from Sessions 1â€"5 present

Common mistakes to avoid: blank or vague outline boxes; a lesson with no outcome or an outcome with no lesson; a mini-lesson over 10 minutes; no practice moment; reading a script on camera; a huge video file; defence answers with no evidence; a

one-line ethics note; over-claiming in the defence; leaving everything to the last hour.

INSTRUCTOR REFERENCE SOLUTION (do not show learners):

> ***Outline:*** *Ngozi's complete one-page outline as in Section F.2 â€" eight parts, specific, coverage test passed. (A learner with a different course produces different content but the same eight-part completeness.)*
>
> ***Mini-lesson:*** *Ngozi's 7-minute recorded Lesson 1 (Section F.3) â€" opening tied to outcome at 0:00â€"0:45, input 0:45â€"2:30, demonstration 2:30â€"4:30, planned practice pause 4:30â€"5:45, closing check 5:45â€"6:30, close 6:30â€"7:00; recorded on the phone or OBS, compressed, hosted unlisted, slides offered as PDF.*
>
> ***Defence:*** *The model answers in Section I (mode + outcomes; how you know learning happened) plus two more from the standard five â€" engagement (the 4:30 pause and the live poll/breakout) and ethics (large type, compressed video, own-or-free material, name-and-email only, unlisted with consent).*
>
> ***Ethics note:*** *As in Section F.2 Part 8 â€" one paragraph covering the five rules.*
>
> *A strong learner solution differs in content but ticks every rubric row: complete, consistent, within time, justified, evidenced, ethical, organised.*

M. KNOWLEDGE CHECK

(Learner version â€" answers only in the Instructor Key below.)

Q1. Short answer. Name the eight parts of the one-page mini-course outline, in order.

Q2. Multiple choice. Which mini-lesson opening best ties to a stated outcome? a) "Hello everyone, welcome back to my channel." b) "Today I will talk about sewing." c) "By the end of this lesson, you will have taken and recorded your three body measurements." d) "Sewing is a very useful skill that many people want."

Q3. True or false. A recorded mini-lesson must be exactly 10 minutes long.

Q4. Explain. Your outline promises five lessons and six outcomes. What does the coverage test tell you to do?

Q5. Scenario. In the viva you are asked, "How would you know learning happened?" Which artefacts do you point to, and what do you say about each? (Name at least two.)

Q6. Practical. Your recorded mini-lesson is 14 minutes long. List the three things you will do to bring it inside 5â€"10 minutes.

INSTRUCTOR ANSWER KEY (Q1â€"Q6)

A1. (1) Course title, (2) target learner, (3) delivery mode and why, (4) five lessons each with a measurable outcome, (5) free tools used, (6) schedule and session length, (7) assessment plan, (8) ethics note. (Accept any order that covers all eight; the order above matches the template.)

A2. (c) "By the end of this lesson, you will have taken and recorded your three body measurements." (It states the outcome in plain words and tells the learner exactly what they will be able to do. A is a greeting, B is a topic, D is a vague claim â€" none states an outcome.)

A3. False. The mini-lesson must be **5â€"10 minutes** â€" within that range, not at one exact length. A 7-minute lesson that does the four jobs well beats a padded 10-minute one; an 11-minute lesson fails the time limit.

A4. The coverage test says: every outcome must have a lesson that teaches it, and every lesson must have an outcome. Five lessons cannot honestly carry six outcomes â€" so either cut the outcome (it was a wish, not a promise) or restructure the course so each outcome is taught. A course that promises six outcomes in five lessons is not internally consistent, and the viva will find it.

A5. Name at least two, e.g.: (1) **The quiz** â€" "my 5-question auto-graded Google Forms quiz maps one question to each outcome, so I see instantly which outcome is weak"; (2) **The assignment and rubric** â€" "the 'photograph your finished skirt' assignment is marked with the 4-criterion rubric, so the final product is checked against a standard"; (3) **The lesson's closing check** â€" "the lesson ends with a self-check that catches wrong measurements before the learner cuts fabric." (Accept any two with a correct evidence link; the answer must point at real artefacts, not float.)

A6. Three things, e.g.: (1) **Plan with timings first** â€" write the four jobs (opening, content, practice, close) with times, then record to the plan instead of talking freely; (2) **Record in short takes** â€" opening, demo, close â€" and cut the rambling and dead silences; (3) **Cut content to one outcome** â€" a mini-lesson teaches one thing well; everything else moves to another lesson or the worksheet. (Accept any three of: timed plan, short takes/editing, cutting content, re-recording.)

N. REFLECTION AND RECAP

Plain-English summary. Today you finished the course by finishing your capstone. You learned that the capstone is **assembly, not new work** â€" your five sessions of artefacts become one complete thing. You learned the **eight parts of a one-page outline** â€" title, target learner, mode and why, five lessons with outcomes, tools and schedule, assessment plan, ethics note â€" and the two tests that prove it works: the coverage test and the stranger test. You learned that a **5â€"10 minute mini-lesson** has four jobs â€" an opening tied to an outcome, real content, a planned practice moment, and a closing check â€" and that recorded or live is a choice to make on purpose, with reasons. You learned the **defence technique** â€" claim, evidence, reason â€" and that "I don't know, but my plan would be X" is an honest, markable answer. And you learned what your certificate **honestly** means: that you can design and deliver a short, structured online lesson using free tools â€" no more, and no less.

Five important takeaways:

1. **The capstone is a closed folder** â€" nine files, five sessions of work, assembled today.
2. **The outline passes two tests** â€" coverage (every outcome has a lesson; every lesson has an outcome) and the stranger test (a stranger could tell who, how, what and how-you-know).
3. **The mini-lesson has four jobs in 5â€"10 minutes** â€" opening, content, practice moment, closing check â€" planned with timings before a single minute is recorded.
4. **The defence points to evidence** â€" claim, evidence, reason, for five standard questions, spoken aloud before they are spoken for real.
5. **The certificate is honest** â€" it certifies the craft you demonstrated, it can be verified at cea.ng/certificates/verify, and it does not claim to be a qualification it is not.

Questions to help you recognise what you can now do:

- Can I assemble my five artefacts into one complete outline with no blank boxes?
- Can I run the coverage test and the stranger test on my own outline?
- Can I plan a 5â€"10 minute lesson with the four jobs and timings â€" and deliver it recorded or live?
- Can I answer "Why this mode and these outcomes?" and "How would you know learning happened?" out loud, pointing at my artefacts?
- Can I state what my certificate does â€" and does not â€" certify?

Reflection questions (write five honest sentences before you leave):

1. Which artefact in your folder are you most proud of, and why?
2. Which viva question is still your weakest â€" and what will you do this week to strengthen it?
3. What is the single biggest difference between the learner who joined in Session 1 and the instructor leaving today?
4. What will you teach first, for real, after this course â€" and who is your first learner?
5. What is one thing this course promised that it actually delivered?

Course wrap-up â€" what happens now.

- **Submit your capstone pack** within 72 hours (Assignment L) and attend your viva slot. The viva is five to ten minutes: present your outline, show or play your mini-lesson, answer three questions.
- **Your marks:** practicals 15%, assignments 15%, knowledge checks 15%, simulation 15%, capstone 30%, viva 5%, attendance 5%. To pass you need at least 50% overall **and** a pass on the capstone â€" a high score elsewhere can never replace demonstrated delivery.
- **Your certificate:** the CEA Certificate in Online Teaching, issued on successful completion of the capstone. Keep the reference safe and verify it at **cea.ng/certificates/verify**.
- **Your portfolio:** your folder is the first item. Teach for real, collect honest feedback, iterate on what the data shows, and grow.
- **Your next steps:** advanced CEA work â€" longer course design, video production, facilitation, running a paid cohort â€" is there when you are ready. The capstone mini-lesson is only the beginning.

Say this to close the session:

> *"You came in with a subject you know. You are leaving with a craft you can prove. If you can teach it in a room, you can teach it online â€" and you have just shown us that you can. From zero to expert, together. Congratulations."*

O. INSTRUCTOR EVALUATION NOTES

Observable signs of genuine competence:

- The learner's outline has all eight parts filled with **specific, artefact-backed** content â€" no vague boxes, no "a quiz" without detail.
- The learner runs the coverage test without being asked and fixes any lesson-withno-outcome or outcome-with-no-lesson gaps themselves.
- The learner's mini-lesson is **within 5â€"10 minutes** and all four jobs are visible â€" especially the planned practice moment, which proves they understand that engagement is designed, not hoped for.
- The learner chose recorded or live **on purpose** and can state one honest reason.
- The learner's defence answers use claimâ€"evidenceâ€"reason and **point at real artefacts** ("my Session 5 quiz maps to the outcomes") â€" not floating generalities.
- The learner answers "I don't know" honestly and offers a plan, rather than inventing.
- The learner's ethics note covers all five rules, and their material is their own or free-to-use with credit.
- The learner's folder is complete: nine files, named, dated, every session represented.

Common misconceptions to watch for and correct:

- "The capstone is new work I haven't done." â†' It is assembly â€" the artefacts already exist; today's job is to put them on one page and defend them.
- "Longer is better." â†' A 14-minute ramble fails; a 7-minute planned lesson passes. Tight beats long.
- "The practice moment will happen naturally." â†' It will not. It must be planned with a time, written on the sheet, and spoken (or prompted) deliberately.
- "The defence is about sounding clever." â†' It is about evidence. Point at the artefact; name the reason.
- "Ethics is a box to tick." â†' It is a design decision: what data you collect shapes what your course asks of real people.
- "The certificate makes me a qualified teacher." â†' It certifies the online delivery craft â€" honestly stated and verifiable. Never let a graduate over-claim it; correct them kindly and quickly.
- "I can copy the Ngozi model exactly." â†' They may copy the **structure**, never the content. A defence answer about a sewing course from a JAMB tutor is instantly exposed.

Suggested remedial exercises for learners who struggle:

1. **Coverage test drill:** give the learner an outline with two mismatches (a lesson with no outcome; an outcome with no lesson) and ask them to find and fix both.
2. **Viva aloud drill:** the learner answers one standard question out loud in 90 seconds while a partner checks for claim, evidence and reason. Repeat until the shape is automatic.
3. **Timing trim drill:** the learner takes a 12-minute lesson plan and re-times it to 8 minutes by cutting content â€" learning that cutting is a design skill.

Differentiation:

- **Level 1 (supported):** provide the outline with Parts 1â€"3 and 5â€"6 already filled from the learner's artefacts; the learner completes only the lessons/outcomes, assessment plan and ethics note. For the mini-lesson, allow the learner to deliver live with the instructor as co-host, or to submit a 5-minute version. For the defence, allow two questions instead of three.
- **Level 2 (standard):** the session as written â€" full outline, full mini-lesson, three defence answers.
- **Level 3 (challenge):** ask the learner to design a **second delivery mode** for the same course (e.g., if recorded, plan the live version) and explain in a short paragraph what changes in the engagement plan, the schedule and the assessment â€" showing they understand mode as a design decision, not a default. Additionally, ask them to write a one-paragraph "first iteration plan": what they would change after their first real run of the course.

Capstone links. This session **is** the capstone: the outline assembled in Section H becomes the capstone submission, the mini-lesson planned in Section I becomes the recorded or live delivery, and the defence answers become the viva. Remind learners that the marking rubric for the full capstone (30%) lives in `Part6_Capstone_Project/01_Capstone_Assessment_Rubric.md`, and that the viva adds 5%. A learner who completes today's work well is not "preparing for" the capstone â€” they are **finishing** it.

Timing guidance. The priority is **every learner leaving with a complete outline and a timed mini-lesson plan** (Sections H and I). If the room is slow, shorten the case study (Section J) to a 5-minute read-aloud and cap the demonstration walkthrough (G.2) at the four jobs without pausing the video. Protect the assembly time â€” a learner who leaves with a blank outline has no capstone, no matter how good the lecture was. Reserve the last 10â€“12 minutes of the session for the course wrap-up and the honest close; it matters more than it looks.

END OF SESSION 6

Congratulations â€” you have completed the CEA Online Teaching course. From zero to expert, together.
