Course Roadmap

Session 01 — Understanding the Computer

Session 02 — Keyboard Mouse Typing

Session 03 — Files Folders Digital Workplace

Session 04 — Internet Safe Browsing

Session 05 — Email Online Communication

Session 06 — Demonstrated Independence Capstone

OVERVIEW

Course Roadmap

What we cover in every session

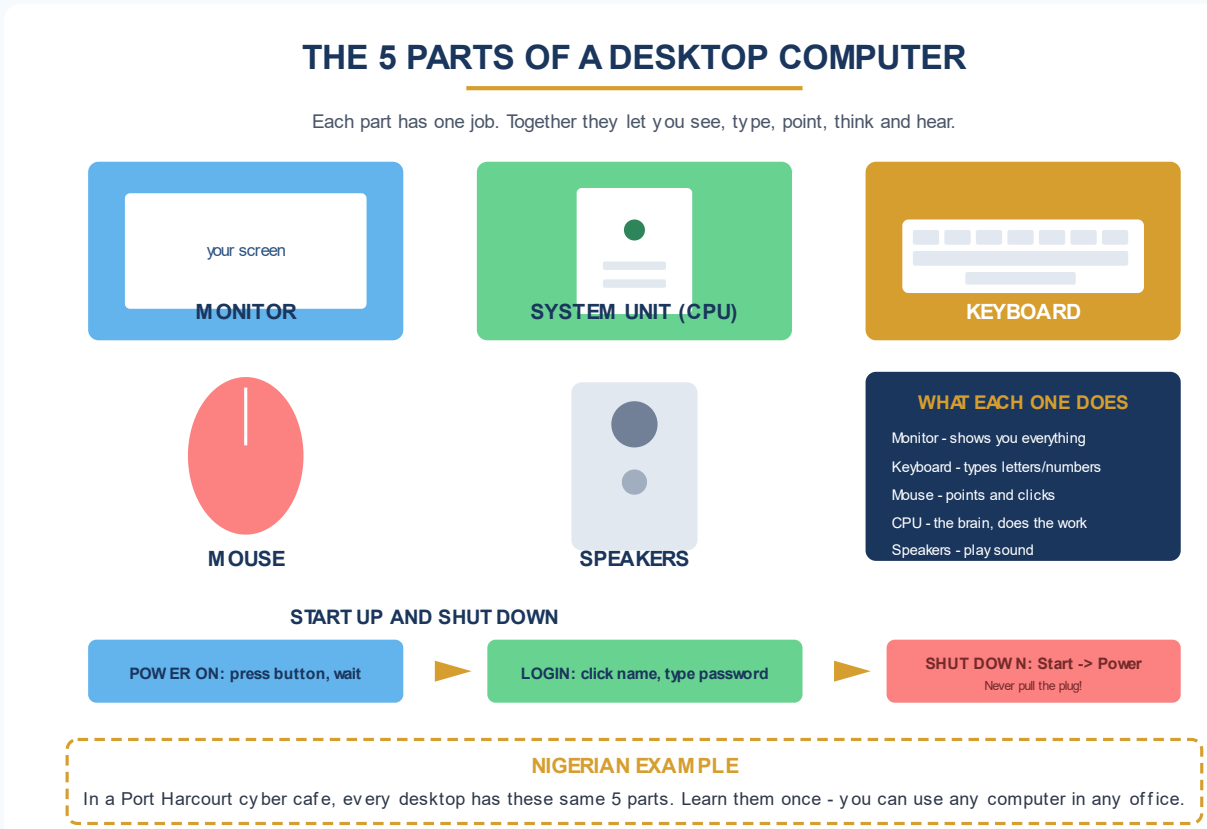

#	SESSION TOPIC	WEEK / MODULE	DURATION
01	Understanding the Computer		105 minutes
02	Keyboard Mouse Typing		105 minutes
03	Files Folders Digital Workplace		105 minutes
04	Internet Safe Browsing		105 minutes
05	Email Online Communication		105 minutes
06	Demonstrated Independence Capstone		105 minutes

How to use this book: Each session below is a complete, ready-to-teach lesson note. Section A tells you what to prepare, B lists the outcomes, D–F are the teaching content, G–H are your demos and practicals, and the knowledge check with answer key is at the end. The concept diagram for each session is embedded as a visual aid.

SESSION 01 OF 6

Understanding the Computer

CONCEPT DIAGRAM — SESSION 01

SESSION 1: UNDERSTANDING THE COMPUTER

Week: 1 **Module:** The Machine **Duration:** 105 minutes **Difficulty:** Absolute Beginner **Prerequisite Knowledge:** None **Connection to Previous Session:** First session â€" no prior session **Preparation Required Before Class:**

- Ensure all machines are powered off
- Keyboards and mice positioned correctly
- Windows login screen displayed on each machine
- Print finger-placement handouts (one per learner)
- Prepare a "mystery box" (a closed cardboard box with a computer component inside, e.g., a mouse) for the opening activity
- Have a physical keyboard and mouse to hold up and point to during the lecture

A. SESSION IDENTIFICATION

Field	Detail
Session Number	1
Title	Understanding the Computer

Field	Detail
Week	1
Module	The Machine
Duration	105 minutes
Difficulty	Absolute Beginner
Prerequisite Knowledge	None
Connection to Previous Session	First session
Preparation	Machines off, login screen ready, handouts printed

B. LEARNING OUTCOMES

By the end of this session, the learner will be able to:

1. **Name and identify** the five main hardware components of a desktop computer (monitor, keyboard, mouse, CPU/system unit, speakers) and explain what each one does.
2. **Explain the difference** between a desktop computer and a laptop computer.
3. **Power on** a computer correctly by pressing the power button and waiting for it to start.
4. **Log in** to a Windows user account by clicking their name and typing a password.
5. **Identify** the desktop, taskbar, Start button, and system tray on a Windows screen.
6. **Shut down** a computer correctly using the Start menu (not by pulling the plug).
7. **Explain why** shutting down correctly matters (prevents file damage and data loss).

C. REQUIRED MATERIALS

Hardware:

- One desktop computer per learner (provided by CEA)
- One keyboard per learner
- One mouse per learner
- One monitor per learner
- One set of speakers per learner (optional but recommended)

Software:

- Windows 10 or Windows 11 operating system (pre-installed)
- A pre-created Windows user account for each learner (username: "Learner", password: "Cea2026!")

Printed Materials:

- Finger-placement handout (one per learner)
- "Parts of a Computer" diagram handout (one per learner)

Teaching Aids:

- A physical keyboard and mouse for the instructor to hold up and point to
- A "mystery box" (closed cardboard box with a computer component inside)
- Whiteboard or flip chart for drawing diagrams

Internet: Not required for this session.

Alternative for Learners Without a Machine: Pair with a learner who has a machine; take turns identifying components while the partner operates.

D. OPENING ACTIVITY (10 minutes)

The Mystery Box

Instructor Setup: Before class, place a computer mouse inside a closed cardboard box. Do not tell the learners what is inside.

Instructor Script: "Good morning, everyone. Welcome to Cyber Elias Academy. Before we turn anything on, I want to play a quick game. I have a box here. Inside this box is something that you will use every single day of this course. I am going to pass the box around. Gently shake it, listen to it, feel how heavy it is â€" but do not open it. When it reaches you, whisper your guess to the person next to you. We will reveal the answer together."

What Happens: The box is passed around. Learners guess. Common guesses: "a phone," "a book," "a mouse," "a keyboard."

Reveal: Open the box and hold up the mouse. Say: "This is a computer mouse. It is one of the five main parts of a computer. By the end of today, you will know all five parts, what they do, and how to use them. You will also turn on a computer for the first time â€" and turn it off properly. Let us begin."

Expected Learner Response: Excitement, curiosity, some nervousness. The activity breaks the ice and introduces the first hardware component in a memorable way.

E. PREREQUISITE REVIEW (5 minutes)

This is the first session, so there is no prior knowledge to review.

However, the instructor should quickly assess the room:

Instructor Script: "Before we start, I want to know where everyone is. Raise your hand if you have never turned on a computer before. [Pause for hands.] Raise your hand if you have used a computer but only to watch someone else. [Pause.] Raise your hand if you have used a computer on your own. [Pause.] Wonderful. Whatever your answer, you are in the right place. This course starts from zero. By the end of today, you will know things about computers that many people who 'use' computers every day do not know."

How to Address Common Gaps:

- If a learner has never touched a keyboard, pair them with a slightly more confident learner for the first practical exercise.
- If a learner is very nervous, reassure them: "You cannot break anything by pressing the wrong button. The worst that can happen is we restart. That is it."

F. FULL LECTURE NOTES (35 minutes)

Topic 1: What Is a Computer? (5 minutes)

Instructor Script: "A computer is a machine that takes information in, works on it, and gives information back out. That is all it does. It is like a very fast, very obedient assistant. You tell it what to do, and it does it â€" exactly what you say, not what you meant. If you tell it the wrong thing, it does the wrong thing. That is why we learn to give it clear instructions.

Think of a computer like a kitchen. The kitchen has tools â€" a knife, a stove, a fridge. The tools do not cook by themselves. A person uses the tools to prepare food. In the same way, a computer has tools â€" a screen, a keyboard, a mouse. You use these tools to do work: writing letters, sending messages, finding information, keeping records.

The word 'computer' comes from 'compute,' which means to calculate. The first computers were built to do mathematics. Today, computers do much more than calculate. They store photographs, play music, connect people across the world, and run businesses. But at the heart, they are still machines that follow instructions."

Key Point: A computer is a tool. It is not magic. It is not alive. It does exactly what you tell it to do.

Topic 2: Desktop vs Laptop (5 minutes)

Instructor Script: "Look around the room. The computers you see are called desktop computers. They are called 'desktop' because they sit on a desk. They have separate parts: a monitor (the screen), a keyboard, a mouse, and a system unit (the box

that does the thinking). These parts are connected by cables.

A laptop computer is different. A laptop is one single unit. The screen, keyboard and thinking-box are all folded together. You can carry a laptop to a different room, to a cafÃ©, to another city. A desktop stays on the desk.

Here is a simple way to remember: a desktop is like a landline phone â€” it stays in one place. A laptop is like a mobile phone â€” you can carry it with you.

Both types do the same work. The skills you learn today work on both. If you use a laptop at home, everything I teach you today will still apply."

Show: Hold up a picture of a desktop and a laptop (or point to the desktops in the room and then hold up a laptop if available).

Topic 3: The Five Main Hardware Components (15 minutes)

Instructor Script: "Every computer â€” desktop or laptop, cheap or expensive, old or new â€” has five main parts. Let us learn them one by one. I will hold up each part, tell you its name, and tell you what it does."

Component 1: The Monitor (Screen) "This is the monitor. It is the screen. It shows you what the computer is doing. It is like a television screen, but instead of showing programmes, it shows your work. Without a monitor, you cannot see what the computer is doing. The monitor does not think â€” it only shows. It is like a window: you look through it to see what is happening inside the computer."

Component 2: The Keyboard "This is the keyboard. It is how you talk to the computer. When you press a key, the computer receives a letter, a number or a command. The keyboard is like a typewriter, but with extra keys for special jobs. You will learn the keyboard in detail in the next session."

Component 3: The Mouse "This is the mouse. It is how you point at things on the screen. When you move the mouse on the desk, a small arrow on the screen moves too. You use the mouse to click on things, to select things, to open things. You will learn the mouse in the next session."

Component 4: The CPU / System Unit "This box is called the CPU, or the system unit, or sometimes just 'the computer.' CPU stands for Central Processing Unit. This is the part that thinks. Everything the computer does â€” every calculation, every image, every word â€” is processed inside this box. The monitor, keyboard and mouse are just tools for talking to this box. The box is the brain. On a laptop, this brain is hidden underneath the keyboard."

Component 5: Speakers "These are speakers. They let the computer play sound â€” music, videos, notification sounds. Some computers have speakers built into the monitor. Some have separate speakers like these. Some people use headphones instead. Speakers are optional â€” a computer works fine without them â€” but they make the experience more pleasant."

Summary Table (write on whiteboard):

Part	What It Does	Real-Life Comparison
Monitor	Shows you what the computer is doing	A television screen
Keyboard	How you type instructions to the computer	A typewriter
Mouse	How you point and click on the screen	A finger pointing
CPU / System Unit	The brain â€” does all the thinking	The engine of a car
Speakers	Plays sound	A radio

Key Point: The monitor, keyboard, mouse and speakers are called "peripherals" â€” they are the tools you use to talk to the brain (the CPU). The CPU is the actual computer. The peripherals are the computer's face, hands and voice.

Topic 4: Powering On and Logging In (5 minutes)

Instructor Script: "Now let us turn on the computer. This is the moment. I want you to watch carefully, because there is a right way and a wrong way to do this.

The right way:

1. Look at the system unit (the box). Find the power button. It is usually a round button with a symbol that looks like a circle with a line at the top. That symbol means 'power.'

2. Press the power button once. Do not hold it down. Just press it once, like pressing a doorbell.
3. Wait. The computer will make some sounds. The screen will light up. This is called 'booting up.' It takes about 30 to 60 seconds. Be patient.
4. When the screen stops changing, you will see a login screen. This is a picture with a name and a password box.
5. Click on your name. A box will appear where you type your password.
6. Type your password. The letters will appear as dots â€" this is normal, it is a security feature so people cannot see your password over your shoulder.
7. Press Enter. The screen will change again, and then you will see the desktop.

The wrong way:

- Do not press the power button repeatedly. One press is enough.
- Do not unplug the computer to turn it off. We will learn the right way to turn it off in a few minutes.
- Do not press every button on the keyboard hoping something will happen. Wait for the computer to finish starting."

Key Point: Press the power button once, wait patiently, then log in with your password.

Topic 5: The Windows Desktop (5 minutes)

Instructor Script: "What you see now is called the desktop. It is called the desktop because it is like the top of a real desk. On a real desk, you have papers, folders, a calculator, a pen. On the computer desktop, you have icons, a taskbar, and a Start button.

Let me point out the main parts:

The Desktop Background: This is the picture or colour behind everything. It is called the wallpaper. You can change it if you want.

Icons: These are the small pictures on the desktop. Each icon represents a program, a file or a folder. For example, the Recycle Bin is an icon. We will learn about that later.

The Taskbar: This is the long bar at the bottom of the screen. It shows which programs are currently open. It also has the Start button on the left side.

The Start Button: This is the Windows logo, usually in the bottom-left corner. Clicking it opens the Start menu, which is like a table of contents for everything on the computer.

The System Tray: This is the area in the bottom-right corner of the taskbar. It shows the time, the date, the volume icon, the Wi-Fi icon, and other small indicators.

The Clock: The time and date are shown in the bottom-right corner. This is useful for knowing when you started a task and how long it took."

Key Point: The desktop is your workspace. The taskbar shows what is open. The Start button is how you find programs.

Topic 6: Shutting Down Correctly (5 minutes)

Instructor Script: "When you finish using the computer, you need to turn it off. But you must do it the right way. The wrong way is to pull the plug or press the power button and hold it down. That is like slamming a door â€" it works, but it damages things over time.

The right way to shut down:

1. Click the Start button (the Windows logo in the bottom-left corner).
2. Click the Power icon (a circle with a line at the top).
3. Click 'Shut down.'
4. Wait for the computer to turn off completely. The screen will go black. The system unit will stop making noise.
5. You can now leave.

Why does this matter? When you shut down correctly, the computer saves its settings, closes all programs properly, and prepares for the next time you use it. If you just pull the plug, you can lose work, damage files, and cause problems that are expensive to fix.

Think of it like this: shutting down correctly is like packing your bag carefully before leaving home. Pulling the plug is like running out the door and leaving everything on the floor."

Key Point: Always shut down through the Start menu. Never pull the plug.

G. INSTRUCTOR DEMONSTRATION (15 minutes)

Demonstration 1: Identifying Components (5 minutes)

What the Instructor Prepares:

- A clear view of the system unit, monitor, keyboard, mouse and speakers
- A whiteboard or flip chart to draw a simple diagram

What the Instructor Says and Does: "I am going to point to each part of the computer and say its name. Repeat after me."

1. Point to the monitor. "This is the monitor. It shows me what the computer is doing. Monitor."
2. Point to the keyboard. "This is the keyboard. I use it to type. Keyboard."
3. Point to the mouse. "This is the mouse. I use it to point and click. Mouse."
4. Point to the system unit. "This is the system unit, or CPU. It is the brain. CPU."
5. Point to the speakers. "These are speakers. They play sound. Speakers."

What Learners Should Observe: The instructor pointing to each component and saying its name clearly.

Expected Result: Learners can repeat the five names after the instructor.

Questions the Instructor Can Ask:

- "Who can point to the monitor?" (Select a learner.)
- "What does the CPU do?" (Answer: It thinks / it is the brain.)
- "If I want to type a letter, which part do I use?" (Answer: The keyboard.)

Demonstration 2: Powering On and Logging In (5 minutes)

What the Instructor Prepares:

- A machine at the front of the room connected to a projector or large screen
- The login screen displayed

What the Instructor Says and Does: "Watch carefully. I am going to turn on the computer and log in. Count the steps with me."

1. "Step 1: I find the power button on the system unit. It is this round button here. I press it once." (Press the power button.)
2. "Step 2: I wait. The computer is starting. I can hear it. The screen is changing. I do not touch anything. I wait." (Wait for the login screen to appear.)
3. "Step 3: I see the login screen. I click on my name." (Click the user account.)
4. "Step 4: I type my password. Watch â€" the letters appear as dots. This is normal." (Type the password.)
5. "Step 5: I press Enter. The computer is logging me in. I wait for the desktop to appear." (Press Enter and wait.)
6. "Step 6: I am now logged in. I can see the desktop. I am ready to work."

What Learners Should Observe: The full sequence from power button to desktop, with the instructor narrating each step.

Expected Result: Learners can describe the six steps of powering on and logging in.

Common Errors and Corrections:

- If the learner presses the power button multiple times: "One press is enough. The computer heard you the first time."
- If the learner types the password wrong: "Check that Caps Lock is not on. Passwords are case-sensitive, which means capital and small letters matter."
- If the learner cannot find the power button: "Look for the symbol that looks like a circle with a line at the top. It is usually on the front of the system unit."

Demonstration 3: Navigating the Desktop (5 minutes)

What the Instructor Prepares:

- The desktop displayed on the projector

What the Instructor Says and Does: "Now I am going to show you the desktop. I will point to each part and tell you its name."

1. "This is the desktop background. It is the picture behind everything." (Point to the wallpaper.)
2. "These are icons. Each icon is a shortcut to a program or file." (Point to several icons.)
3. "This is the taskbar. It is the long bar at the bottom." (Point to the taskbar.)
4. "This is the Start button. It is the Windows logo in the bottom-left corner." (Point to the Start button.)
5. "This is the system tray. It shows the time, date, volume and Wi-Fi." (Point to the system tray.)
6. "This is the clock. It tells me the time." (Point to the clock.)

"Now I will open the Start menu. Watch what happens." (Click the Start button.) "This is the Start menu. It shows all the programs on the computer. I can find anything from here." (Close the Start menu by clicking elsewhere.)

What Learners Should Observe: The instructor identifying each desktop element and opening/closing the Start menu.

Expected Result: Learners can point to the desktop, taskbar, Start button and system tray on their own machines.

H. GUIDED PRACTICAL EXERCISE (20 minutes)

Exercise: "First Contact"

Practical Objective: The learner will power on the computer, log in, identify the five hardware components, navigate the desktop, and shut down correctly â€” all with the instructor guiding them step by step.

Starting Materials:

- A powered-off computer at each station
- The login credentials (username: "Learner", password: "Cea2026!")

Instructions:

Part 1: Power On and Log In (5 minutes)

1. "Find the power button on your system unit. It is the round button with the circle-and-line symbol. Press it once."
2. "Wait for the computer to start. Do not touch anything. Just wait."
3. "When you see the login screen, click on the name 'Learner.'"
4. "Type the password: Cea2026! â€” Remember, the exclamation mark is part of the password. Press Shift and the 1 key to type it."
5. "Press Enter. Wait for the desktop to appear."

Instructor Prompts:

- "Raise your hand if you can see the desktop."
- "What do you see on your screen?" (Expected: icons, taskbar, wallpaper.)

Part 2: Identify the Components (5 minutes)

6. "Now, without touching the computer, point to the monitor. Good. Point to the keyboard. Good. Point to the mouse. Good. Point to the system unit. Good. Point to the speakers. Well done."

Instructor Prompts:

- "Who can tell me what the monitor does?" (Answer: It shows what the computer is doing.)
- "Who can tell me what the CPU does?" (Answer: It thinks / it is the brain.)

Part 3: Navigate the Desktop (5 minutes)

7. "Move your mouse on the desk. Watch the arrow on the screen. It moves too. This is how you point at things."
8. "Click the Start button once with the left mouse button. The Start menu opens. Click anywhere else to close it."
9. "Look at the taskbar. Can you see the time in the bottom-right corner? What time is it?"
10. "Find the Recycle Bin icon on the desktop. It looks like a small bin. Do not open it yet. Just find it."

Instructor Prompts:

- "What happens when you move the mouse?" (Answer: The arrow moves.)
- "What is in the bottom-right corner?" (Answer: The clock, date, volume, Wi-Fi.)

Part 4: Shut Down Correctly (5 minutes)

11. "Now we are going to turn off the computer the right way. Click the Start button."
12. "Click the Power icon. It looks like a circle with a line at the top."
13. "Click 'Shut down.'"
14. "Wait for the computer to turn off. The screen will go black. Do not touch anything until it is completely off."

Instructor Prompts:

- "Why do we shut down through the Start menu instead of pulling the plug?" (Answer: It prevents damage and data loss.)

Expected Result: Every learner has successfully powered on, logged in, identified components, navigated the desktop, and shut down correctly.

Troubleshooting Guidance:

- If the screen does not turn on: "Check that the monitor power cable is connected. Check that the monitor is turned on â€" there is usually a power button on the monitor itself."
- If the password does not work: "Check that Caps Lock is not on. Make sure you are typing Cea2026! exactly."
- If the mouse does not move: "Check that the mouse cable is connected to the system unit. If it is a wireless mouse, check that the USB receiver is plugged in."

Completion Checklist:

- ☐ Powered on the computer correctly
- ☐ Logged in with the correct password
- ☐ Identified all five hardware components
- ☐ Opened and closed the Start menu
- ☐ Found the taskbar, system tray and clock
- ☐ Shut down correctly through the Start menu

I. INDEPENDENT CLASS EXERCISE (10 minutes)

Exercise: "Computer Detective"

Scenario: "You are helping your friend Chinedu, who just bought a second-hand computer. Chinedu knows nothing about computers. He calls you and says, 'There is a box, a screen, a keyboard and a mouse. Which one do I press to turn it on?' You need to explain to Chinedu how to use his new computer."

Task: Without looking at your notes, write down (on a piece of paper or in Notepad) the answers to these five questions:

1. What are the five main parts of a computer?
2. Which part do you press to turn the computer on?
3. What is the difference between a desktop and a laptop?
4. What is the name of the screen you see when the computer is ready to use?
5. What is the correct way to turn off the computer?

Requirements:

- Write in full sentences where possible
- You may look at the computer in front of you for reference
- You may NOT look at another learner's paper

Time Allowance: 10 minutes

Success Criteria:

- All five questions answered correctly
- At least three answers written in complete sentences
- The learner can explain their answers to a partner

Hints Available If the Learner Gets Stuck:

- Hint 1: "Look at the computer in front of you. Point to each part and say its name."
- Hint 2: "Remember the kitchen analogy. The monitor is like a window. The keyboard is like a typewriter."
- Hint 3: "The power button has a special symbol. It looks like a circle with a line at the top."

Complete Answer Key for the Instructor:

1. **What are the five main parts of a computer?**
   - Monitor (screen), keyboard, mouse, CPU/system unit, speakers.
2. **Which part do you press to turn the computer on?**
   - The power button on the system unit (CPU).
3. **What is the difference between a desktop and a laptop?**
   - A desktop sits on a desk and has separate parts (monitor, keyboard, mouse, system unit). A laptop is one single unit that you can carry around.
4. **What is the name of the screen you see when the computer is ready to use?**
   - The desktop.
5. **What is the correct way to turn off the computer?**
   - Click the Start button, click the Power icon, and click "Shut down." Wait for the computer to turn off completely.

J. REAL-WORLD CASE STUDY (5 minutes)

Case: "Adaeze's First Day at Work"

Situation: Adaeze is 24 years old. She has just been hired as a receptionist at a small accounting firm in Port Harcourt. On her first day, her boss shows her to a desk and says, "This is your computer. Please type up the client list and email it to me by 5pm." Adaeze has never used a computer before. She is terrified. She does not want to look foolish, so she nods and sits down.

The Problem: Adaeze does not know how to turn on the computer. She does not know what a desktop is. She does not know how to type. She does not know what email is. She sits at the desk for 20 minutes, afraid to touch anything. Her boss walks past and sees her staring at the screen. He is not impressed.

Why It Matters: Adaeze could lose her job on the first day. Not because she is not intelligent, but because she was never taught how to use a computer. This happens to thousands of people in Nigeria every year. Employers assume everyone knows how to use a computer. They do not teach. They expect.

Relevant Concept: The five hardware components and the correct power-on procedure. If Adaeze had taken this course, she would have known exactly what to do: press the power button, wait, log in, and start working.

Worked Solution: If Adaeze had taken this course, here is what she would do:

1. She would press the power button on the system unit once.
2. She would wait for the computer to start.
3. She would log in with her password.
4. She would see the desktop and know she is ready to work.
5. She would open a word processor (taught in the next course) and type the client list.
6. She would save the file (taught in Session 3).
7. She would open her email (taught in Session 5) and send the file to her boss.

Reasoning: Each step builds on the previous one. Without knowing the hardware, she cannot power on. Without powering on, she cannot log in. Without logging in, she cannot work. This course teaches the first four steps. The next course teaches the rest.

Possible Mistake: Adaeze might press the power button and nothing happens. She might think the computer is broken. In reality, the monitor might not be turned on. The fix: check the monitor power button.

Correction: Always check that the monitor is turned on before assuming the computer is broken. The monitor has its own power button, separate from the system unit.

Transfer Exercise: "Your friend Amara has just bought a laptop. She calls you and says, 'I pressed the button but nothing happened.' What are three things you would tell her to check?"

Professional Connection: In any office job â€" receptionist, administrator, sales officer, church secretary, school bursar â€" the first skill expected is the ability to turn on a computer and start working. This is the foundation of every other digital skill.

K. COMMON MISTAKES AND TROUBLESHOOTING (5 minutes)

Mistake 1: Pressing the Power Button Repeatedly

Symptoms: The learner presses the power button five times in a row. **Likely Cause:** Nervousness or impatience. The learner thinks one press did not work. **How to Investigate:** Ask the learner, "Did you hear the computer start? Did the screen change?" **Safe Corrective Steps:** Explain that one press is enough. The computer heard the first press. Pressing again does not make it start faster. **How to Confirm the Problem Is Resolved:** The learner presses once and waits patiently. **How to Prevent Recurrence:** Demonstrate the correct technique at the start of every session until it becomes habit.

Mistake 2: Typing the Password with Caps Lock On

Symptoms: The password does not work. The learner is sure they typed it correctly. **Likely Cause:** Caps Lock is on, so all letters are capitalized. Passwords are case-sensitive. **How to Investigate:** Look at the keyboard. Is the Caps Lock light on? (On most keyboards, there is a small light above the Caps Lock key.) **Safe Corrective Steps:** Press the Caps Lock key once to turn it off. Type the password again. **How to Confirm the Problem Is Resolved:** The learner successfully logs in. **How to Prevent Recurrence:** Teach learners to check the Caps Lock light before typing a password. Show them that passwords are case-sensitive.

Mistake 3: Confusing the Monitor Power Button with the System Unit Power Button

Symptoms: The learner presses a button and nothing happens. **Likely Cause:** The learner is pressing the monitor power button, not the system unit power button. Or vice versa. **How to Investigate:** Ask the learner, "Which button did you press? Show me." **Safe Corrective Steps:** Explain that the monitor and the system unit each have their own power button. Both need to be on. **How to Confirm the Problem Is Resolved:** The screen lights up and the computer starts. **How to Prevent Recurrence:** Label the power buttons with small stickers during the first session. Remove the labels in Session 2 to test if learners can find them without help.

Mistake 4: Pulling the Plug to Turn Off the Computer

Symptoms: The learner reaches behind the computer to unplug it. **Likely Cause:** The learner does not know the correct shutdown procedure. **How to Investigate:** Ask, "What are you doing?" The learner will say, "Turning it off." **Safe Corrective Steps:** Explain the correct shutdown procedure. Explain why pulling the plug is harmful. **How to Confirm the Problem Is Resolved:** The learner shuts down through the Start menu. **How to Prevent Recurrence:** Demonstrate the correct shutdown at the end of every session. Make it a habit.

Mistake 5: Thinking the Computer Is Broken When It Is Just Slow

Symptoms: The learner says, "It is not working. Nothing is happening." **Likely Cause:** The computer is still starting up. The learner is impatient. **How to Investigate:** Look at the screen. Is there a loading animation? Is the hard drive light blinking? **Safe Corrective Steps:** Explain that computers take time to start. Compare it to a car engine on a cold morning â€" it needs a moment to warm up. **How to Confirm the Problem Is Resolved:** The learner waits patiently and the computer finishes starting. **How to Prevent Recurrence:** Set a timer during the first session. Show learners that the computer starts in less than one minute. After that, they know what "normal" looks like.

L. SESSION ASSIGNMENT (5 minutes)

Assignment Title: "My Computer Journal"

Purpose: To reinforce the five hardware components and the power-on/shutdown procedures by having the learner explain them in their own words.

Realistic Scenario: "Your younger brother or sister is coming to visit you this weekend. They have never seen a computer. They ask you, 'What is a computer? How do you turn it on?' Write down what you would tell them."

Detailed Instructions:

1. Open Notepad (the instructor will show you how).
2. Write a short paragraph (5â€"7 sentences) explaining what a computer is.
3. Write a numbered list of the five main parts of a computer and what each one does.
4. Write a numbered list of the steps to turn on a computer.
5. Write a numbered list of the steps to turn off a computer.
6. Save the file on the Desktop with the name "My Computer Journal."
7. Show the saved file to the instructor before leaving.

Required Deliverables:

- A text file named "My Computer Journal" saved on the Desktop
- The file contains: a paragraph, a list of five parts, a list of power-on steps, a list of shutdown steps

Submission Format:

- The file must be saved on the Desktop of the academy machine
- The learner must show the instructor the saved file before leaving

Deadline Recommendation:

- Before leaving the session (in-class assignment)

Marking Rubric:

Criterion	Excellent (5)	Good (3)	Needs Improvement (1)
Paragraph explanation	Clear, accurate, uses own words	Mostly clear, minor errors	Unclear or copied from notes
Five parts listed	All five correct and named	Four correct	Three or fewer correct
Power-on steps	All steps in correct order	Mostly correct, minor order errors	Incorrect or missing steps
Shutdown steps	All steps in correct order	Mostly correct, minor order errors	Incorrect or missing steps
File saved correctly	Saved on Desktop with correct name	Saved but wrong location or name	Not saved

Total: 20 marks

Common Mistakes to Avoid:

- Writing "the computer is a machine" without explaining what that means
- Forgetting to mention the speakers
- Writing "press the button" instead of "press the power button on the system unit"
- Writing "pull the plug" instead of "click Start, then Power, then Shut down"

Instructor Reference Solution:

Paragraph: A computer is a machine that takes information in, works on it, and gives information back out. It is like a very fast assistant that follows instructions exactly. You use it to write, to find information, to communicate with people, and to store important files. A computer has five main parts: the monitor, the keyboard, the mouse, the system unit, and the speakers.

Five Parts:

1. Monitor â€" shows what the computer is doing
2. Keyboard â€" used to type instructions
3. Mouse â€" used to point and click on the screen
4. System unit (CPU) â€" the brain that does the thinking
5. Speakers â€" play sound

Power-On Steps:

1. Press the power button on the system unit once
2. Wait for the computer to start
3. Click on your name on the login screen
4. Type your password
5. Press Enter
6. Wait for the desktop to appear

Shutdown Steps:

1. Click the Start button
2. Click the Power icon
3. Click "Shut down"
4. Wait for the computer to turn off completely

M. KNOWLEDGE CHECK (5 minutes)

Questions

1. Multiple Choice: Which part of the computer is the "brain"? a) Monitor b) Keyboard c) CPU / System Unit d) Mouse

Answer: c) CPU / System Unit

2. Short Answer: What is the difference between a desktop computer and a laptop computer?

Answer: A desktop sits on a desk and has separate parts (monitor, keyboard, mouse, system unit). A laptop is one single unit that you can carry around.

3. Multiple Choice: What is the correct way to turn off a computer? a) Pull the plug b) Press and hold the power button c) Click Start, then Power, then Shut down d) Close the laptop lid

Answer: c) Click Start, then Power, then Shut down

4. Explain in Your Own Words: Why is it important to shut down a computer correctly instead of pulling the plug?

Answer: Shutting down correctly saves settings, closes programs properly, and prevents file damage and data loss. Pulling the plug can cause problems that are expensive to fix.

5. Practical Identification: Point to the monitor, keyboard, mouse, system unit, and speakers on your computer.

Answer: The learner correctly identifies all five components.

6. Scenario-Based: Your friend says, "I pressed the power button but nothing happened." What are two things you would tell your friend to check?

Answer: (1) Check that the monitor is turned on â€” it has its own power button. (2) Check that the power cable is connected to the system unit and to the wall socket.

7. Error-Detecting: A learner writes in their assignment: "To turn off the computer, pull the plug from the wall." What is wrong with this, and what should they write instead?

Answer: Pulling the plug is the wrong way to shut down. It can damage files and cause problems. The correct way is: Click the Start button, click the Power icon, and click "Shut down."

N. REFLECTION AND RECAP (5 minutes)

Plain-English Summary

Today you learned what a computer is, what its five main parts are, and how to turn it on and off correctly. You now know that the monitor shows you what the computer is doing, the keyboard is how you type, the mouse is how you point and click, the system unit is the brain, and the speakers play sound. You also learned that a desktop sits on a desk and a laptop is portable. Most importantly, you turned on a computer for the first time and shut it down correctly. That is a real achievement.

Five Important Takeaways

1. A computer is a machine that follows instructions â€" it is not magic and it is not alive.
2. The five main parts are: monitor, keyboard, mouse, system unit (CPU), and speakers.
3. To turn on a computer, press the power button once, wait, then log in with your password.
4. The desktop is your workspace. The taskbar shows what is open. The Start button helps you find programs.
5. Always shut down through the Start menu â€" never pull the plug.

Questions That Help You Recognise What You Can Now Do

- Can you name all five parts of a computer without looking at your notes?
- Can you explain what each part does?
- Can you turn on a computer and log in without help?
- Can you shut down a computer correctly?
- Can you explain the difference between a desktop and a laptop?

Connection to the Next Session

In the next session, you will learn how to use the keyboard and mouse in detail. You will learn where to place your fingers on the keyboard, how to type using the correct technique, and how to measure your typing speed. You will also learn the most important keyboard shortcuts that will save you hours of work in every future course. The computer is now your tool. Next, you will learn to use it with your hands.

O. INSTRUCTOR EVALUATION NOTES

Observable Signs of Competence

- The learner can name all five hardware components without hesitation.
- The learner presses the power button once and waits patiently.
- The learner logs in without asking for help.
- The learner can point to the desktop, taskbar, Start button and system tray.
- The learner shuts down through the Start menu without being reminded.
- The learner explains the difference between a desktop and a laptop in their own words.

Common Misconceptions

- **"The monitor is the computer."** Many beginners think the screen is the computer. Correct this by explaining that the system unit is the brain and the monitor is just the display.
- **"Pressing the power button multiple times makes it start faster."** Explain that one press is enough.
- **"Pulling the plug is a quick way to turn off the computer."** Explain the damage this causes.
- **"The computer is broken when it is slow to start."** Explain that computers take time to boot up.

Suggested Remedial Exercises

- For learners who cannot remember the five parts: Use a labelling exercise. Print a diagram of a computer and have the learner label each part.
- For learners who are nervous about pressing the power button: Let them press it while you hold their hand. Gradually reduce physical support.
- For learners who keep pulling the plug: Make them demonstrate the correct shutdown three times in a row. Repetition builds habit.

Differentiation Guidance

Level 1 â€" Supported (for learners who struggle):

- Provide a labelled diagram of the computer for reference.
- Pair with a more confident learner for practical exercises.

- Allow extra time for the independent exercise.
- Provide the finger-placement handout as a take-home reference.

Level 2 â€" Independent (standard):

- Complete all exercises as written.
- Answer all knowledge check questions.
- Complete the assignment to the standard shown in the rubric.

Level 3 â€" Challenge (for learners who finish early):

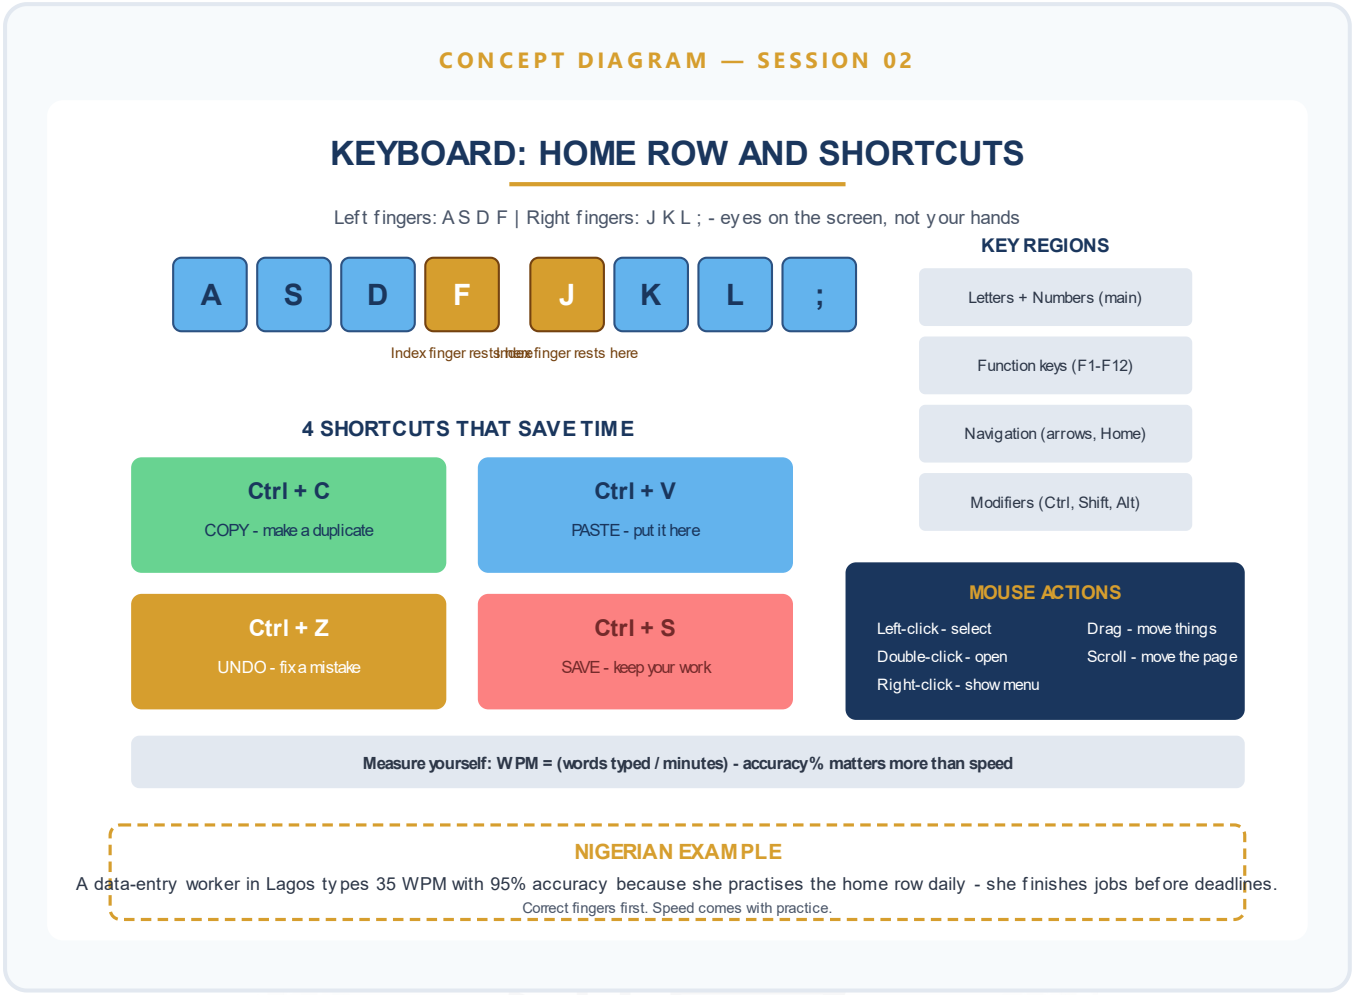

- Ask the learner to research (using the internet) what RAM and hard drive mean, and write a one-sentence explanation of each.
- Ask the learner to explain the difference between hardware and software.
- Ask the learner to find three icons on the desktop and explain what each one does.

End of Session 1

Next Session: Session 2 â€" Keyboard, Mouse & Typing Foundations **What to Bring:** Finger-placement handout (provided), willingness to practise **Preparation:** Open Notepad on all machines, bookmark typing practice website

SESSION 02 OF 6

Keyboard Mouse Typing

SESSION 2: KEYBOARD, MOUSE & TYPING FOUNDATIONS

Week: 1 **Module:** The Hands **Duration:** 105 minutes **Difficulty:** Absolute Beginner **Prerequisite Knowledge:** Session 1 â€" can power on computer, identify components, log in, navigate desktop **Connection to Previous Session:** Builds on Session 1 by introducing the input devices (keyboard and mouse) that the learner already identified but has not yet used in depth

Preparation Required Before Class:

- Open Notepad on all machines
- Ensure typing practice website is bookmarked (e.g., typingclub.com or keybr.com)
- Print finger-placement handouts (one per learner)
- Prepare a typing speed test passage (provided in this document)
- Ensure all keyboards are clean and functional

A. SESSION IDENTIFICATION

Field	Detail
Session Number	2

Field	Detail
Title	Keyboard, Mouse & Typing Foundations
Week	1
Module	The Hands
Duration	105 minutes
Difficulty	Absolute Beginner
Prerequisite Knowledge	Session 1 â€" can power on, log in, identify components
Connection to Previous Session	Builds on Session 1 by teaching the learner to use the input devices they identified
Preparation	Notepad open, typing website bookmarked, handouts printed

B. LEARNING OUTCOMES

By the end of this session, the learner will be able to:

1. **Use the mouse confidently** to perform left-click, right-click, double-click, drag-and-drop, and scroll.
2. **Identify the main key regions** on a QWERTY keyboard (letter keys, number keys, function keys, navigation keys, modifier keys).
3. **Place their fingers correctly** on the home row (left hand: A S D F; right hand: J K L ;).
4. **Type using the correct finger** for each key on the home row.
5. **Use four essential keyboard shortcuts:** Ctrl+C (copy), Ctrl+V (paste), Ctrl+Z (undo), Ctrl+S (save).
6. **Measure their typing speed** in words per minute (WPM) and accuracy percentage.
7. **Explain why** correct finger placement matters for speed and accuracy.

C. REQUIRED MATERIALS

Hardware:

- One desktop computer per learner
- One keyboard per learner
- One mouse per learner
- One monitor per learner

Software:

- Windows 10 or Windows 11
- Notepad (pre-installed)
- A web browser (Chrome or Edge) with a typing practice website bookmarked

Printed Materials:

- Finger-placement handout (one per learner)
- Typing speed test passage (one per learner)

Teaching Aids:

- A large keyboard diagram (poster or projected image)
- A whiteboard or flip chart for drawing the home row

Internet: Required for the typing practice website (academy Wi-Fi).

Alternative for Learners Without Internet: Use offline typing software (e.g., Rapid Typing, Tipp10) or printed keyboard diagrams for finger-placement practice.

D. OPENING ACTIVITY (10 minutes)

The "Type Your Name" Challenge

Instructor Setup: Open Notepad on all machines. Make sure the cursor is blinking in the Notepad window.

Instructor Script: "Good morning, everyone. Today we are going to learn how to use the keyboard and mouse properly. But first, I want to see how you currently type. Open Notepad â€" it should already be open on your screen. If it is not, click the Start button, type 'Notepad,' and press Enter.

Now, type your full name. First name and last name. Use whatever method you normally use â€" one finger, two fingers, whatever feels natural. Go ahead."

What Happens: Learners type their names. Some use one finger. Some use two fingers. Some hunt and peck. Some are very slow.

Instructor Script (after 2 minutes): "Stop. Look at your hands. How many fingers did you use? [Pause.] Most people use one or two fingers. That is called 'hunt and peck' typing â€" you hunt for each key and peck it with one finger. It works, but it is slow. By the end of today, you will know how to use all ten fingers. You will not be fast yet â€" that takes practice â€" but you will be using the right technique. And the right technique is the foundation of speed.

Let us begin."

Expected Learner Response: Amusement at their own slow typing, curiosity about the "right way," some nervousness about learning a new method.

E. PREREQUISIVE REVIEW (5 minutes)

Instructor Script: "Before we start, let us remember what we learned last time. Quick review â€" I will ask questions and you answer out loud."

Review Questions and Expected Answers:

1. "What are the five main parts of a computer?"
    - Monitor, keyboard, mouse, system unit (CPU), speakers.
2. "Which part is the brain?"
    - The system unit / CPU.
3. "What is the correct way to turn off a computer?"
    - Click Start, click Power, click Shut down.
4. "What is the name of the screen you see when the computer is ready?"
    - The desktop.
5. "Point to the taskbar."
    - (Learner points to the bottom bar.)

How to Address Common Gaps:

- If a learner cannot remember the five parts, whisper the answer and ask them to repeat it. Do not embarrass them.
- If a learner confuses the monitor and the system unit, remind them: "The monitor is the screen. The system unit is the box."
- If a learner forgot the shutdown procedure, ask another learner to demonstrate it on their machine.

F. FULL LECTURE NOTES (35 minutes)

Topic 1: The Mouse â€" Your Pointing Tool (10 minutes)

Instructor Script: "The mouse is how you talk to the computer without typing. You move the mouse on the desk, and the arrow on the screen moves too. Let us learn the five main things you can do with a mouse.

1. Left-Click This is the most common mouse action. You press the left button once. You use left-click to select things, to open things, to click buttons. Think of it like pointing at something and saying 'this one.'

2. Right-Click You press the right button once. Right-click opens a menu of options. It is like asking 'what can I do with this?' For example, if you right-click on the desktop, a menu appears with options like 'View,' 'Sort by,' 'Refresh.' We will use right-click in the next session.

3. Double-Click You press the left button twice quickly. Double-click opens things. For example, double-clicking an icon on the desktop opens that program. It is like saying 'open this now.' The key word is quickly â€" two clicks in fast succession. If you wait too long between clicks, the computer thinks you did two single clicks.

4. Drag and Drop You press and hold the left button, move the mouse to a new position, then release the button. This is how you move things from one place to another. For example, you can drag a file from one folder to another. It is like picking up a piece of paper and putting it in a different folder.

5. Scroll Most mice have a wheel between the two buttons. You roll the wheel up and down to move the page up and down. This is called scrolling. It is like turning the pages of a book, but with your finger.

Mouse Grip: Hold the mouse gently. Do not squeeze it. Your hand should rest on top of the mouse, with your index finger on the left button and your middle finger on the right button. Your thumb and ring finger rest on the sides. The mouse should move with your whole hand, not just your wrist.

Common Mistake â€" The Death Grip: Some learners hold the mouse so tightly their knuckles turn white. This causes hand pain and slow movement. Tell learners: 'Hold the mouse like a small bird â€" firmly enough that it does not fly away, gently enough that you do not hurt it.'"

Topic 2: The Keyboard â€" Your Typing Tool (10 minutes)

Instructor Script: "The keyboard is how you type letters, numbers and commands into the computer. Let us learn the main parts of the keyboard.

The QWERTY Layout: The keyboard is called QWERTY because the first six letters on the top row are Q, W, E, R, T, Y. This layout was designed in the 1870s for typewriters. It has not changed much since then. Every keyboard you will ever use â€" on a desktop, a laptop, a phone â€" is based on this layout.

Key Regions:

1. **Letter Keys:** These are the main keys in the middle. They type the letters A to Z.
2. **Number Keys:** These are the keys along the top. They type the numbers 0 to 9.
3. **Function Keys:** These are the keys along the very top, labelled F1 to F12. They do special things depending on the program you are using. We will not use them much in this course.
4. **Navigation Keys:** These are the arrow keys (up, down, left, right) and the Home, End, Page Up, Page Down keys. They move the cursor around the screen.
5. **Modifier Keys:** These are the Shift, Ctrl (Control), Alt, and Windows keys. They do nothing on their own, but when you hold them down and press another key, they change what that key does. For example, holding Shift and pressing 'a' types a capital 'A.' Holding Ctrl and pressing 'C' copies something.
6. **Enter Key:** This is the big key on the right. It confirms what you typed or moves to a new line.
7. **Backspace Key:** This key deletes the character to the left of the cursor. It is like an eraser.
8. **Delete Key:** This key deletes the character to the right of the cursor.
9. **Space Bar:** This is the long bar at the bottom. It types a space.
10. **Caps Lock Key:** This key turns capital letters on or off. When it is on, every letter you type is capital. When it is off, letters are small. There is usually a light on the keyboard that shows when Caps Lock is on.

The Home Row: The most important keys on the keyboard are the home row keys. These are the keys in the middle row: A, S, D, F, G, H, J, K, L, and the semicolon (;). Your fingers rest on these keys when you are not typing other keys. They are called the home row because they are home base â€" your fingers always return to them.

Here is the correct finger placement:

- Left hand: pinky on A, ring finger on S, middle finger on D, index finger on F
- Right hand: index finger on J, middle finger on K, ring finger on L, pinky on ;
- Thumbs rest on the space bar

Why This Matters: When your fingers are on the home row, every key is within reach. You do not have to look at the keyboard. You can type fast and accurately because your fingers know where to go. This is the foundation of all typing."

Topic 3: Typing Technique â€" The Right Way (10 minutes)

Instructor Script: "Now let us learn the correct typing technique. This is the most important skill you will learn in this course. It will take practice, but if you master it, you will type faster than most people who have been using computers for years.

Step 1: Sit Up Straight Sit with your back straight, feet flat on the floor. Your screen should be at eye level. Your keyboard should be at a comfortable height â€" not too high, not too low. Good posture prevents back pain and helps you type longer.

Step 2: Place Your Fingers on the Home Row Left hand: pinky on A, ring finger on S, middle finger on D, index finger on F. Right hand: index finger on J, middle finger on K, ring finger on L, pinky on ;. Thumbs on the space bar.

Step 3: Type Each Key with the Correct Finger Each finger is responsible for specific keys. For example:

- Left pinky: A, Q, Z, 1, Shift (left side)
- Left ring finger: S, W, X, 2
- Left middle finger: D, E, C, 3
- Left index finger: F, R, V, G, T, B, 4, 5
- Right index finger: J, U, M, H, Y, N, 6, 7
- Right middle finger: K, I, comma, 8
- Right ring finger: L, O, period, 9
- Right pinky: ;, P, /, 0, -, =, [,], ', Enter (right side), Shift (right side)
- Thumbs: space bar

Step 4: Return to Home Row After Each Key After you press a key, your finger returns to its home row position. This is like a spring â€" you press and release, press and release. Your fingers are always ready for the next key.

Step 5: Do Not Look at the Keyboard This is the hardest part. You will want to look down. Do not. Trust your fingers. If you make a mistake, use Backspace to correct it and keep going. Speed comes with practice, not with looking.

Why This Works: When you use the correct finger for each key, your hands do not have to move far. Each finger only reaches for keys that are close to its home position. This is much faster than using one finger to reach across the whole keyboard.

Common Mistake â€" The One-Finger Typist: Many people type with one or two fingers. They are slow because their fingers have to travel long distances. They also make more errors because they are not using the muscle memory that comes from correct finger placement. The fix: go slow. Type slowly with the correct fingers. Speed will come later."

Topic 4: Essential Keyboard Shortcuts (5 minutes)

Instructor Script: "Keyboard shortcuts are combinations of keys that perform common actions. They save you time because you do not have to move your hand to the mouse and click. Let us learn the four most important shortcuts.

Ctrl+C â€" Copy Hold the Ctrl key and press C. This copies whatever you have selected (text, a file, an image) to the clipboard. The clipboard is a temporary storage area in the computer's memory. The copied item stays on the clipboard until you copy something else.

Ctrl+V â€" Paste Hold the Ctrl key and press V. This pastes whatever is on the clipboard to the current location. It is like taking a photocopy of something and putting it somewhere else.

Ctrl+Z â€" Undo Hold the Ctrl key and press Z. This undoes your last action. If you made a mistake â€" deleted something you did not mean to delete, typed something wrong â€" Ctrl+Z brings it back. It is like an eraser for your actions.

Ctrl+S â€" Save Hold the Ctrl key and press S. This saves your current work. You should save often â€" every few minutes â€" so you do not lose work if the computer crashes or the power goes out.

Why These Matter: These four shortcuts are used in every program â€" Word, Excel, your browser, everything. They save you hours of time over the course of a career. Learn them now and use them always."

Key Point: Ctrl+C, Ctrl+V, Ctrl+Z, Ctrl+S. Copy, Paste, Undo, Save. These are the four most important keyboard shortcuts in the world.

G. INSTRUCTOR DEMONSTRATION (15 minutes)

Demonstration 1: Mouse Control (5 minutes)

What the Instructor Prepares:

- A clear view of the mouse and the screen
- The desktop displayed on the projector

What the Instructor Says and Does: "Watch my hand on the mouse. I am going to demonstrate the five mouse actions."

1. **Left-Click:** "I press the left button once. See how the icon is now selected? It changed colour. That means I selected it." (Left-click on an icon.)
2. **Right-Click:** "I press the right button once. A menu appeared. This is called a context menu. It shows me what I can do with this icon." (Right-click on the desktop.)
3. **Double-Click:** "I press the left button twice quickly. The program opened. That is double-click." (Double-click on an icon to open it, then close it.)
4. **Drag and Drop:** "I press and hold the left button, move the mouse, and release. The icon moved to a new position. That is drag and drop." (Drag an icon to a new position on the desktop.)
5. **Scroll:** "I roll the wheel up and down. The page moved. That is scrolling." (Open a web page and scroll up and down.)

What Learners Should Observe: The instructor's hand position on the mouse and the result of each action on the screen.

Expected Result: Learners can describe the five mouse actions and what each one does.

Questions the Instructor Can Ask:

- "What is the difference between left-click and right-click?" (Answer: Left-click selects or opens. Right-click opens a menu.)
- "How many clicks in a double-click?" (Answer: Two, quickly.)
- "What is the wheel on the mouse for?" (Answer: Scrolling.)

Demonstration 2: Home Row Finger Placement (5 minutes)

What the Instructor Prepares:

- A large keyboard diagram (poster or projected image)
- The learner's own keyboard

What the Instructor Says and Does: "Watch my hands. I am going to show you the correct finger placement on the home row."

1. "Left hand: pinky on A, ring finger on S, middle finger on D, index finger on F." (Place fingers on the home row.)
2. "Right hand: index finger on J, middle finger on K, ring finger on L, pinky on semicolon." (Place fingers.)
3. "Thumbs rest on the space bar." (Rest thumbs.)
4. "Now I type the home row letters. Watch which finger moves for each letter." (Type: a s d f g h j k l ;)
5. "See? Each finger only moves a little. It reaches for the key and returns home. That is the technique."

What Learners Should Observe: The instructor's fingers on the home row and the small movements for each key.

Expected Result: Learners can place their fingers on the home row correctly.

Common Errors and Corrections:

- If the learner's fingers are on the wrong keys: "Move your left pinky to A. Now your ring finger to S. Good. Now your middle finger to D. Good. Now your index finger to F. Perfect. Now the right hand."
- If the learner is looking at the keyboard: "Look at the screen, not your hands. Trust your fingers."
- If the learner's hands are tense: "Relax. Hold the keyboard like you hold a phone â€” gently."

Demonstration 3: Typing a Sentence (5 minutes)

What the Instructor Prepares:

- Notepad open on the projector

- Fingers on the home row

What the Instructor Says and Does: "I am going to type a sentence using the correct finger placement. Watch my fingers, not the screen."

1. "My fingers are on the home row. I am going to type: 'The quick brown fox jumps over the lazy dog.'"
2. "I type slowly. I do not look at the keyboard. I look at the screen. If I make a mistake, I use Backspace and correct it."
3. (Type the sentence slowly, narrating which finger is moving for each key.)
4. "Done. That took me about 30 seconds. With practice, I can type it in 10 seconds. You will get there too."

What Learners Should Observe: The instructor typing slowly with correct finger placement, looking at the screen, not the keyboard.

Expected Result: Learners understand that typing is a skill that improves with practice.

H. GUIDED PRACTICAL EXERCISE (20 minutes)

Exercise: "Hands On"

Practical Objective: The learner will practise all five mouse actions, place their fingers on the home row correctly, type the home row letters, and use the four essential keyboard shortcuts.

Starting Materials:

- Notepad open on each machine
- Fingers on the home row

Instructions:

Part 1: Mouse Practice (5 minutes)

1. "Move your mouse. Watch the arrow on the screen. Move it to the top-left corner. Now to the bottom-right. Now to the centre. Good."
2. "Left-click on an icon. It is selected. Left-click somewhere else to deselect it."
3. "Right-click on the desktop. A menu appeared. Press Escape to close it."
4. "Double-click on the Recycle Bin. It opened. Close it by clicking the X in the top-right corner."
5. "Drag an icon from one side of the desktop to the other. Release it. Good."
6. "Open a web page. Scroll down. Scroll up. Good."

Instructor Prompts:

- "What happens when you right-click?" (Answer: A menu appears.)
- "How do you close a window?" (Answer: Click the X in the top-right corner.)

Part 2: Home Row Practice (10 minutes)

7. "Place your left pinky on A. Left ring finger on S. Left middle finger on D. Left index finger on F. Right index finger on J. Right middle finger on K. Right ring finger on L. Right pinky on semicolon. Thumbs on the space bar."
8. "Now type: a s d f â€" using your left hand only. Look at the screen, not your fingers."
9. "Now type: j k l ; â€" using your right hand only."
10. "Now type: a s d f j k l ; â€" using both hands."
11. "Now type: f j f j f j f j â€" alternating left and right index fingers."
12. "Now type: a s d f g h j k l ; â€" the full home row."
13. "Now type: the quick brown fox jumps over the lazy dog â€" slowly, using the correct fingers."

Instructor Prompts:

- "Which finger types the letter D?" (Answer: Left middle finger.)
- "Which finger types the letter K?" (Answer: Right middle finger.)
- "What do your thumbs type?" (Answer: The space bar.)

Part 3: Keyboard Shortcuts (5 minutes)

14. "Type your name in Notepad. Now select it by clicking and dragging over it with the mouse. The text should be highlighted."
15. "Hold Ctrl and press C. You copied it. You cannot see anything happen, but it is copied."
16. "Click at the end of the line. Press Enter to go to a new line. Hold Ctrl and press V. Your name appeared again. That is paste."
17. "Hold Ctrl and press Z. The pasted text disappeared. That is undo."
18. "Hold Ctrl and press S. A dialog box appeared asking where to save. Click 'Cancel' for now â€” we will learn about saving in the next session."

Instructor Prompts:

- "What does Ctrl+Z do?" (Answer: It undoes the last action.)
- "Why should you save often?" (Answer: So you do not lose work if something goes wrong.)

Expected Result: Every learner has practised all five mouse actions, typed the home row letters, and used the four keyboard shortcuts.

Troubleshooting Guidance:

- If the learner cannot select text by clicking and dragging: "Press and hold the left mouse button, move the mouse across the text, then release. The text should be highlighted."
- If the learner's fingers keep slipping off the home row: "Slow down. Accuracy is more important than speed right now."
- If the learner cannot type the semicolon: "It is the key next to L. Use your right pinky."

Completion Checklist:

- ☐ Performed all five mouse actions correctly
- ☐ Placed fingers on the home row correctly
- ☐ Typed the home row letters (a s d f j k l ;)
- ☐ Typed "the quick brown fox jumps over the lazy dog"
- ☐ Used Ctrl+C, Ctrl+V, Ctrl+Z, Ctrl+S

I. INDEPENDENT CLASS EXERCISE (10 minutes)

Exercise: "Typing Speed Test"

Scenario: "You are applying for a data entry job. The employer asks you to take a typing test. The test measures how many words you can type in one minute and how accurate you are. Let us take a practice test now."

Task: Go to the typing practice website (bookmarked in your browser). Take a one-minute typing test. Record your results:

- Words per minute (WPM): _____
- Accuracy percentage: _____

Requirements:

- Use the correct finger placement
- Do not look at the keyboard
- Type as fast and as accurately as you can in one minute
- Record your results on a piece of paper

Time Allowance: 5 minutes (1 minute for the test, 4 minutes to record results and reflect)

Success Criteria:

- The learner completes the test
- The learner records their WPM and accuracy
- The learner can explain what WPM means

Hints Available If the Learner Gets Stuck:

- Hint 1: "WPM means words per minute. If you typed 15 words in one minute, your WPM is 15."
- Hint 2: "Accuracy means how many words you typed correctly. If you typed 20 words but 2 were wrong, your accuracy is 90%."

- Hint 3: "Do not worry about being slow. This is your baseline. You will improve with practice."

Complete Answer Key for the Instructor:

There is no single correct answer for a typing speed test. The learner's result is their personal baseline. However, the instructor should expect:

- Most absolute beginners: 5â€“15 WPM
- Learners with some experience: 15â€“25 WPM
- The instructor should record each learner's baseline and compare it to their result in Session 6.

What the Instructor Should Do:

- Record each learner's WPM and accuracy in a spreadsheet or notebook.
- Do not announce results publicly. Typing speed is personal. Some learners will be embarrassed if their speed is announced.
- Praise effort, not speed. "You typed 12 words in one minute using the correct technique. That is a solid foundation. With daily practice, you will double that in a month."

J. REAL-WORLD CASE STUDY (5 minutes)

Case: "Emmanuel's Data Entry Job"

Situation: Emmanuel is 22 years old. He has just been hired as a data entry clerk at a logistics company in Port Harcourt. His job is to type waybill information into a spreadsheet. He is expected to type at least 30 words per minute with 95% accuracy. Emmanuel has never taken a typing course. He uses the hunt-and-peck method with two fingers. He types at 12 WPM with 80% accuracy.

The Problem: Emmanuel cannot meet the job requirement. He is slow and makes many errors. His supervisor is not happy. Emmanuel is stressed. He considers quitting.

Why It Matters: Emmanuel's job depends on his typing speed and accuracy. If he cannot improve, he will lose the job. This is not hypothetical â€” data entry jobs across Nigeria have minimum typing speed requirements. Employers do not have time to train typists. They expect you to already have the skill.

Relevant Concept: Correct finger placement and home row technique. If Emmanuel had learned the correct technique from the beginning, he would be typing at 30+ WPM within a few months of practice.

Worked Solution: If Emmanuel had taken this course, here is what he would do:

1. He would place his fingers on the home row correctly.
2. He would practise typing for 15 minutes every day.
3. He would use a typing practice website to track his progress.
4. Within one month, he would reach 25 WPM.
5. Within two months, he would reach 35 WPM.
6. He would meet the job requirement and keep his job.

Reasoning: Typing is a physical skill, like learning to ride a bicycle. You cannot learn it by reading about it. You learn it by doing it â€” every day, with the correct technique. The correct technique is the foundation. Without it, you will always be slow.

Possible Mistake: Emmanuel might try to type fast before he has mastered the correct technique. This leads to bad habits that are hard to break.

Correction: Go slow. Master the correct technique first. Speed comes naturally with practice. As the saying goes: "Slow is smooth, and smooth is fast."

Transfer Exercise: "Your friend Chinasa types at 20 WPM using two fingers. She wants to reach 40 WPM. What advice would you give her?"

Professional Connection: Every office job that involves a computer requires typing. The faster and more accurately you can type, the more productive you are. This is true for receptionists, administrators, data entry clerks, writers, programmers, and every other computer user.

K. COMMON MISTAKES AND TROUBLESHOOTING (5 minutes)

Mistake 1: Looking at the Keyboard

Symptoms: The learner keeps looking down at the keyboard while typing. **Likely Cause:** Lack of confidence. The learner does not trust their fingers. **How to Investigate:** Watch the learner's eyes. Are they moving between the screen and the keyboard? **Safe Corrective Steps:** Place a piece of cardboard over the learner's hands so they cannot see the keyboard. Force them to look at the screen. **How to Confirm the Problem Is Resolved:** The learner types without looking down. **How to Prevent Recurrence:** Remind the learner at the start of every typing exercise: "Eyes on the screen."

Mistake 2: Using the Wrong Finger

Symptoms: The learner types a key with the wrong finger (e.g., using the left index finger to type S). **Likely Cause:** The learner has not memorised which finger types which key. **How to Investigate:** Watch the learner's hands. Which finger is moving for each key? **Safe Corrective Steps:** Stop the learner. Place their fingers on the home row. Type the key together. Say: "This is the letter S. Which finger types S? The left ring finger. Good. Now type S with your left ring finger." **How to Confirm the Problem Is Resolved:** The learner uses the correct finger for each key. **How to Prevent Recurrence:** Drill the home row letters at the start of every session until the correct finger placement becomes automatic.

Mistake 3: Pressing Too Hard

Symptoms: The learner presses the keys so hard that their fingers make loud clicking sounds. **Likely Cause:** Nervousness or habit from typing on a phone. **How to Investigate:** Listen to the typing. Is it very loud? **Safe Corrective Steps:** Tell the learner: "The keys are sensitive. You only need to press them gently. Try typing as quietly as possible." **How to Confirm the Problem Is Resolved:** The learner types quietly. **How to Prevent Recurrence:** Remind the learner to relax their hands. Tension causes fatigue and slows typing.

Mistake 4: Not Returning to Home Row

Symptoms: The learner's fingers drift away from the home row and do not return. **Likely Cause:** The learner has not developed the habit of returning to home base. **How to Investigate:** Watch the learner's hands after they type a key. Do the fingers return to the home row? **Safe Corrective Steps:** Stop the learner. Place their fingers on the home row. Type one key together. Say: "After typing this key, where does your finger go? Back to the home row. Good. Now type another key and return." **How to Confirm the Problem Is Resolved:** The learner's fingers return to the home row after each key. **How to Prevent Recurrence:** Drill the home row letters slowly, emphasising the return to home after each key.

Mistake 5: Confusing Left and Right

Symptoms: The learner uses the left hand for right-hand keys and vice versa. **Likely Cause:** The learner has not memorised which hand types which keys. **How to Investigate:** Watch the learner's hands. Are they crossing over? **Safe Corrective Steps:** Drill left-hand-only and right-hand-only exercises separately. "Type a s d f with your left hand only. Good. Now type j k l ; with your right hand only. Good. Now both hands together." **How to Confirm the Problem Is Resolved:** The learner uses the correct hand for each key. **How to Prevent Recurrence:** Continue separate-hand drills until the learner can type the home row without crossing hands.

L. SESSION ASSIGNMENT (5 minutes)

Assignment Title: "My Typing Practice Plan"

Purpose: To establish a daily typing practice routine that will improve the learner's speed and accuracy over the coming weeks.

Realistic Scenario: "You have a job interview in two weeks. The employer requires a minimum typing speed of 20 WPM. You currently type at [your baseline from today's test]. You need to practise every day to reach the requirement."

Detailed Instructions:

1. Open Notepad.
2. Write a practice plan that includes:
   - Your current typing speed (from today's test): _____ WPM

- Your target typing speed: 20 WPM
- How many minutes per day you will practise: _____ minutes
- What time of day you will practise: _____
- What you will practise (e.g., home row letters, typing practice website, typing sentences)

3. Write five sentences that you will type as practice. These should be sentences you might use in a real job (e.g., "Please find attached the report you requested.").
4. Save the file on the Desktop with the name "My Typing Practice Plan."
5. Show the saved file to the instructor before leaving.

Required Deliverables:

- A text file named "My Typing Practice Plan" saved on the Desktop
- The file contains: current WPM, target WPM, practice time, practice schedule, five practice sentences

Submission Format:

- The file must be saved on the Desktop of the academy machine
- The learner must show the instructor the saved file before leaving

Deadline Recommendation:

- Before leaving the session (in-class assignment)

Marking Rubric:

Criterion	Excellent (5)	Good (3)	Needs Improvement (1)
Current WPM recorded	Accurate record from today's test	Recorded but inaccurate	Not recorded
Target WPM stated	Clear target (e.g., 20 WPM)	Vague target	No target
Practice time specified	Specific number of minutes	Vague (e.g., "a while")	Not specified
Practice schedule	Specific time of day	Vague	Not specified
Five practice sentences	Five relevant, well-written sentences	Three to four sentences	Fewer than three sentences
File saved correctly	Saved on Desktop with correct name	Saved but wrong location or name	Not saved

Total: 30 marks

Common Mistakes to Avoid:

- Writing "I will practise" without specifying when or for how long
- Copying sentences from the board instead of writing original ones
- Not saving the file (just leaving it open in Notepad)

Instructor Reference Solution:

Current WPM: 12 (example â€" use the learner's actual result) **Target WPM:** 20 **Practice time:** 15 minutes per day **Practice schedule:** Every evening at 7pm **Practice content:** Home row letters, typing practice website, five practice sentences

Five Practice Sentences:

1. Please find attached the report you requested.
2. I will attend the meeting tomorrow at 10am.
3. Thank you for your email. I will reply shortly.
4. The total amount due is fifteen thousand naira.
5. Kindly confirm receipt of this message.

M. KNOWLEDGE CHECK (5 minutes)

Questions

1. Multiple Choice: Which finger types the letter F? a) Left pinky b) Left ring finger c) Left middle finger d) Left index finger

Answer: d) Left index finger

2. Short Answer: What are the five main things you can do with a mouse?

Answer: Left-click, right-click, double-click, drag-and-drop, scroll.

3. Multiple Choice: What does Ctrl+Z do? a) Copy b) Paste c) Undo d) Save

Answer: c) Undo

4. Explain in Your Own Words: Why is it important to use the correct finger for each key when typing?

Answer: Using the correct finger for each key means your hands do not have to move far. Each finger only reaches for keys close to its home position. This makes typing faster and more accurate.

5. Practical Identification: Place your fingers on the home row. Type: a s d f j k l ;

Answer: The learner types the home row letters using the correct fingers.

6. Scenario-Based: Your friend says, "I type with two fingers and I am slow. What should I do?" What advice would you give?

Answer: Learn the correct finger placement on the home row. Practise typing with all ten fingers. Go slow at first â€" accuracy is more important than speed. With daily practice, speed will improve.

7. Error-Detecting: A learner writes in their assignment: "I will practise typing for a while every day." What is wrong with this, and what should they write instead?

Answer: "A while" is vague. The learner should specify exactly how many minutes per day they will practise (e.g., "I will practise typing for 15 minutes every day at 7pm").

N. REFLECTION AND RECAP (5 minutes)

Plain-English Summary

Today you learned how to use the mouse and keyboard properly. You learned the five mouse actions: left-click, right-click, double-click, drag-and-drop, and scroll. You learned the main parts of the keyboard and the correct finger placement on the home row. You learned the four most important keyboard shortcuts: Ctrl+C (copy), Ctrl+V (paste), Ctrl+Z (undo), and Ctrl+S (save). You also took a typing speed test to establish your baseline. This is the foundation of every computer skill you will learn from now on.

Five Important Takeaways

1. The mouse has five actions: left-click, right-click, double-click, drag-and-drop, and scroll.
2. The home row is where your fingers rest: A S D F (left hand) and J K L ; (right hand).
3. Each finger is responsible for specific keys. Use the correct finger for each key.
4. The four essential keyboard shortcuts are: Ctrl+C, Ctrl+V, Ctrl+Z, Ctrl+S.
5. Typing speed improves with daily practice using the correct technique.

Questions That Help You Recognise What You Can Now Do

- Can you perform all five mouse actions without thinking about it?
- Can you place your fingers on the home row correctly?
- Can you type the home row letters without looking at the keyboard?
- Can you use Ctrl+C, Ctrl+V, Ctrl+Z, and Ctrl+S?
- Do you know your current typing speed?

Connection to the Next Session

In the next session, you will learn how to manage files and folders. You will learn how to create folders, save files, move things around, and keep your digital work organised. This is the skill that separates a person who uses a computer from a person who controls it. You now have the physical skills â€" the mouse and keyboard control. Next, you will learn the organisational skills.

O. INSTRUCTOR EVALUATION NOTES

Observable Signs of Competence

- The learner performs all five mouse actions confidently.
- The learner places their fingers on the home row correctly without being reminded.
- The learner types the home row letters using the correct fingers.
- The learner uses Ctrl+C, Ctrl+V, Ctrl+Z, and Ctrl+S without hesitation.
- The learner's typing speed is recorded and they understand what WPM means.

Common Misconceptions

- **"The mouse is the computer."** Some learners think the mouse is the computer. Remind them: the mouse is a pointing tool, like a finger.
- **"I can type fast with two fingers."** Some learners believe they do not need to learn the correct technique. Show them their typing speed test result and explain that correct technique will make them faster.
- **"Keyboard shortcuts are only for experts."** Remind them that shortcuts save time for everyone, from beginners to professionals.

Suggested Remedial Exercises

- For learners who cannot remember the home row: Use a printed keyboard diagram and have the learner colour-code which finger types which key.
- For learners who keep looking at the keyboard: Cover their hands with a piece of cardboard and force them to look at the screen.
- For learners who cannot use the mouse confidently: Play a simple game (e.g., Solitaire or Minesweeper) that requires mouse control.

Differentiation Guidance

Level 1 â€” Supported (for learners who struggle):

- Provide a finger-placement handout with colour-coded keys.
- Allow extra time for typing exercises.
- Pair with a more confident learner for peer support.
- Focus on accuracy, not speed.

Level 2 â€” Independent (standard):

- Complete all exercises as written.
- Answer all knowledge check questions.
- Complete the assignment to the standard shown in the rubric.

Level 3 â€” Challenge (for learners who finish early):

- Ask the learner to type a full paragraph (minimum 100 words) using the correct technique.
- Ask the learner to research and write down three more keyboard shortcuts and what they do.
- Ask the learner to teach the home row to a partner who is struggling.

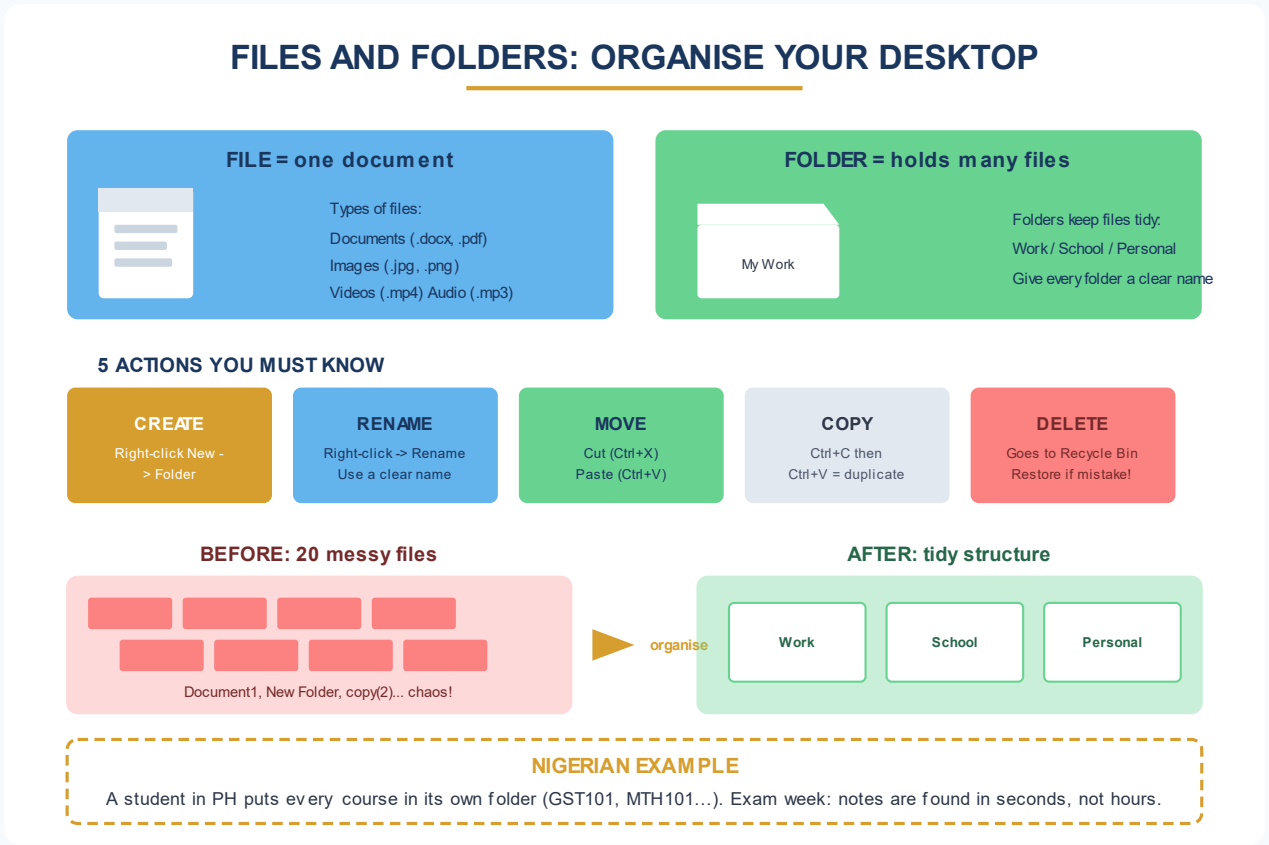

End of Session 2

Next Session: Session 3 â€” Files, Folders & the Digital Workplace **What to Bring:** Willingness to organise, attention to detail **Preparation:** Create a "Messy Files" folder on each desktop containing 20 mixed files for the sorting exercise

SESSION 03 OF 6

Files Folders Digital Workplace

CONCEPT DIAGRAM — SESSION 03

SESSION 3: FILES, FOLDERS & THE DIGITAL WORKPLACE

Week: 1 **Module:** The Digital Workplace **Duration:** 105 minutes **Difficulty:** Beginner **Prerequisite Knowledge:** Sessions 1â€"2 â€" can power on, log in, use keyboard and mouse, type basic text **Connection to Previous Session:** Learners now have the physical skills to control the computer; this session introduces the concept of storing and organising their work digitally **Preparation Required Before Class:**

- Create a "Messy Files" folder on each desktop containing 20 mixed files (documents, images, videos, audio) for the sorting exercise
- Ensure File Explorer is accessible from the taskbar or desktop
- Prepare a sample folder structure diagram for the mini-project
- Print "File Organization Tips" handout (one per learner)

A. SESSION IDENTIFICATION

Field	Detail
Session Number	3
Title	Files, Folders & the Digital Workplace

Field	Detail
Week	1
Module	The Digital Workplace
Duration	105 minutes
Difficulty	Beginner
Prerequisite Knowledge	Sessions 1â€"2 â€" full computer operation, mouse and keyboard control
Connection to Previous Session	Builds on Sessions 1â€"2 by teaching the learner to store and organise their digital work
Preparation	"Messy Files" folder on each desktop, folder structure diagram, handouts printed

B. LEARNING OUTCOMES

By the end of this session, the learner will be able to:

1. **Explain what a file is** and identify common file types (documents, images, videos, audio).
2. **Explain what a folder is** and why folders are used to organise files.
3. **Create a new folder** on the Desktop and give it a meaningful name.
4. **Rename a folder** when the name is not appropriate.
5. **Save a file** from Notepad into a specific folder.
6. **Move a file** from one folder to another using cut-and-paste or drag-and-drop.
7. **Copy a file** to create a duplicate in a different location.
8. **Delete a file** and restore it from the Recycle Bin.
9. **Organise a messy folder** of 20 files into a logical folder structure.
10. **Explain why** good file organisation matters in a professional workplace.

C. REQUIRED MATERIALS

Hardware:

- One desktop computer per learner
- One keyboard per learner
- One mouse per learner
- One monitor per learner

Software:

- Windows 10 or Windows 11
- Notepad (pre-installed)
- File Explorer (pre-installed)

Printed Materials:

- "File Organization Tips" handout (one per learner)
- Folder structure diagram for the mini-project (one per learner)

Teaching Aids:

- A whiteboard or flip chart for drawing folder structures
- A physical file tray or box with paper files for a real-life comparison

Sample Files:

- A "Messy Files" folder on each desktop containing 20 mixed files:

- 5 documents (.txt or .docx): "Letter to Bank," "Meeting Notes," "Budget 2026," "CV Draft," "Recipe"
- 5 images (.jpg or .png): "Family Photo," "Product Image," "Logo Draft," "Event Flyer," "Screenshot"
- 3 videos (.mp4): "Birthday Video," "Tutorial Clip," "Advertisement"
- 2 audio (.mp3): "Voice Note," "Song Download"
- 5 miscellaneous: "Spreadsheet," "Presentation," "PDF Document," "Compressed Archive," "Shortcut"

Internet: Not required for this session.

Alternative for Learners Without a Machine: Pair with a learner who has a machine; take turns creating folders and moving files while the partner observes and advises.

D. OPENING ACTIVITY (10 minutes)

The "Messy Desk" Analogy

Instructor Setup: Bring a physical file tray or box filled with 20 loose papers (printouts of the sample files). Place it on a table at the front of the room.

Instructor Script: "Good morning, everyone. Look at this tray. It has 20 papers in it. They are all mixed up â€" letters, photographs, receipts, notes. If I asked you to find the 'Budget 2026' paper, how long would it take? [Pause.] A while, right? You would have to pick up each paper one by one and read it.

Now watch what I do." (Sort the papers into five piles: Documents, Images, Videos, Audio, Miscellaneous.) "I have sorted the papers into five groups. Now if I ask you to find the 'Budget 2026' paper, where do you look? [Pause.] In the Documents pile. How long will it take now? [Pause.] Much faster.

This is exactly what we do on a computer. A computer desktop can become just as messy as this tray. Files pile up. You forget what is where. You waste time looking for things. Today, you will learn how to organise your computer files so that you can find anything in seconds. This is one of the most important skills you will ever learn. Let us begin."

Expected Learder Response: Recognition that they have experienced this problem on their own computers (or phones). Relief that there is a solution.

E. PREREQUISITE REVIEW (5 minutes)

Instructor Script: "Before we start, let us remember what we learned in the last two sessions. Quick review."

Review Questions and Expected Answers:

1. "What are the five main parts of a computer?"
   - Monitor, keyboard, mouse, system unit (CPU), speakers.
2. "What are the five things you can do with a mouse?"
   - Left-click, right-click, double-click, drag-and-drop, scroll.
3. "Where do your fingers rest on the keyboard?"
   - On the home row: A S D F (left hand) and J K L ; (right hand).
4. "What does Ctrl+S do?"
   - It saves the current work.
5. "What was your typing speed in the last session?"
   - (Each learner states their WPM. The instructor acknowledges each one.)

How to Address Common Gaps:

- If a learner cannot remember the home row, ask a partner to show them.
- If a learner forgot the keyboard shortcuts, write them on the whiteboard: Ctrl+C, Ctrl+V, Ctrl+Z, Ctrl+S.
- If a learner is still struggling with the mouse, pair them with a more confident learner for the first practical exercise.

F. FULL LECTURE NOTES (35 minutes)

Topic 1: What Is a File? (5 minutes)

Instructor Script: "A file is a single piece of information stored on a computer. It can be a document, a photograph, a video, a song, a spreadsheet â€" anything. Every file has a name and a type.

File Names: The name is what you call the file. For example, 'Letter to Bank' or 'Budget 2026.' A good file name tells you what the file is without opening it. A bad file name tells you nothing. For example, 'Document1' or 'New File' are bad names because they do not describe the content.

File Types: The type tells you what kind of file it is and what program you need to open it. The type is shown by the extension â€" the letters after the dot at the end of the file name. For example:

- .txt â€" a text file (opens in Notepad)
- .docx â€" a Word document (opens in Microsoft Word)
- .xlsx â€" an Excel spreadsheet (opens in Microsoft Excel)
- .jpg or .png â€" an image (opens in a photo viewer)
- .mp4 â€" a video (opens in a media player)
- .mp3 â€" an audio file (opens in a music player)
- .pdf â€" a PDF document (opens in a PDF reader)

Why File Types Matter: If you try to open a video file in a text editor, it will not work. You need the right program for the right file type. Think of it like this: you cannot play a DVD in a radio. Different formats need different players."

Topic 2: What Is a Folder? (5 minutes)

Instructor Script: "A folder is a container for files. It is like a physical folder that you use to hold papers. You put related files together in a folder so you can find them easily.

Why Folders Matter: Imagine a computer with 500 files and no folders. Every file is on the desktop, all mixed up. Finding one file would take hours. Now imagine the same 500 files organised into 20 folders. Each folder has a name like 'Work,' 'Personal,' 'Photos,' 'Music.' You know exactly where to look. Finding one file takes seconds.

Folder Structure: Folders can contain other folders. This is called a folder structure or directory structure. For example:

- Desktop
  - Work
    - Clients
      - Client A
      - Client B
    - Invoices
    - Reports
  - Personal
    - Photos
    - Music
    - Documents

This is like a tree. The Desktop is the trunk. 'Work' and 'Personal' are branches. 'Clients,' 'Invoices' and 'Reports' are smaller branches. The files are the leaves.

Real-Life Comparison: A folder is like a drawer in a filing cabinet. You do not throw all your papers into one drawer. You have one drawer for bills, one for receipts, one for personal letters. Folders on a computer work the same way."

Topic 3: File Explorer â€" Your Digital Filing Cabinet (10 minutes)

Instructor Script: "File Explorer is the program you use to see, organise and manage your files and folders. It is like a window into your computer's filing cabinet. Let me show you how to open it and what you see.

Opening File Explorer:

1. Look at the taskbar at the bottom of the screen.
2. Find the File Explorer icon. It looks like a yellow folder.
3. Click it once. File Explorer opens.

What You See in File Explorer:

- **Navigation Pane (left side):** This shows the main locations on your computer â€" Desktop, Documents, Downloads, Pictures, Music, Videos, and This PC (which shows all drives).
- **File List (right side):** This shows the files and folders in the location you selected.
- **Address Bar (top):** This shows the path to the current location. For example, 'This PC > Desktop' means you are looking at the Desktop.
- **Search Box (top-right):** This lets you search for files by name.

The Desktop: The Desktop is the first thing you see when you log in. It is a special folder where you can put files and folders for quick access. Everything on the Desktop is actually stored in a folder called 'Desktop' inside your user account.

Documents, Pictures, Music, Videos: These are special folders that Windows creates for you. They are like labelled drawers in your filing cabinet. You should save documents in Documents, photos in Pictures, music in Music, and videos in Videos. This keeps things organised automatically.

This PC: This shows all the storage devices connected to your computer â€" the hard drive (usually called C:), any USB drives, and any other storage. The C: drive is where Windows and all your files are stored."

Topic 4: Creating, Naming and Renaming Folders (5 minutes)

Instructor Script: "Now let us learn how to create a folder and give it a good name.

Creating a Folder:

1. Navigate to where you want the folder (e.g., the Desktop).
2. Right-click in an empty space.
3. Click 'New.'
4. Click 'Folder.'
5. A new folder appears with the name 'New folder' highlighted.
6. Type a name for the folder and press Enter.

Naming Folders: A good folder name is:

- Descriptive â€" it tells you what is inside
- Short â€" not more than two or three words
- Consistent â€" use the same style for all folders

Examples of good folder names: 'Work Documents,' 'Family Photos,' 'School Assignments,' 'Business Invoices.' Examples of bad folder names: 'New folder,' 'Stuff,' 'Things,' 'Misc.'

Renaming a Folder:

1. Right-click on the folder.
2. Click 'Rename.'
3. The name is highlighted. Type the new name and press Enter.

Why Naming Matters: In a professional workplace, other people may need to find your files. If your folders are named 'Stuff' and 'Things,' no one can find anything. If they are named 'Q1 Sales Report' and 'Client Contracts,' anyone can find what they need. Good naming is a professional skill."

Topic 5: Saving Files in the Right Place (5 minutes)

Instructor Script: "When you create a file â€" a document, a spreadsheet, a presentation â€" you need to save it. Saving means storing the file on the computer's hard drive so you can find it again later.

How to Save a File:

1. Create your file (e.g., type something in Notepad).

2. Click 'File' in the top-left corner.
3. Click 'Save' or 'Save As.'
4. A dialog box appears. This is where you choose:
    - **Where to save:** Click on a folder in the navigation pane (e.g., Desktop, Documents).
    - **What to name the file:** Type a name in the 'File name' box.
5. Click 'Save.'

Why 'Save As' Matters: The first time you save a file, always use 'Save As.' This lets you choose the location and the name. After the first save, you can use 'Save' (or Ctrl+S) to update the file without changing the location or name.

Common Mistake â€" Saving Everything on the Desktop: Many people save every file on the Desktop. After a few weeks, the Desktop is covered with files and you cannot find anything. The fix: save files in the appropriate folder. Documents go in Documents. Photos go in Pictures. Work files go in a Work folder."

Topic 6: Moving, Copying and Deleting Files (5 minutes)

Instructor Script: "Sometimes you need to move a file from one folder to another. Sometimes you need to copy a file so you have two versions. Sometimes you need to delete a file you do not need anymore. Let us learn how.

Moving a File:

1. Right-click on the file.
2. Click 'Cut.' (This removes the file from its current location and puts it on the clipboard.)
3. Navigate to the destination folder.
4. Right-click in an empty space in the destination folder.
5. Click 'Paste.' (This places the file in the new location.)

Alternatively, you can drag-and-drop: click and hold the file, drag it to the destination folder, and release.

Copying a File:

1. Right-click on the file.
2. Click 'Copy.' (This puts a duplicate on the clipboard. The original stays where it is.)
3. Navigate to the destination folder.
4. Right-click in an empty space.
5. Click 'Paste.' (This places a copy in the new location. The original is still in the old location.)

Deleting a File:

1. Right-click on the file.
2. Click 'Delete.' (This moves the file to the Recycle Bin.)
3. The file is not gone forever. It is in the Recycle Bin.

The Recycle Bin: The Recycle Bin is like a trash can. When you delete a file, it goes to the Recycle Bin. You can restore it if you change your mind. To restore a file:

1. Double-click the Recycle Bin icon on the Desktop.
2. Right-click on the file.
3. Click 'Restore.'

To permanently delete a file, right-click on it in the Recycle Bin and click 'Delete.' This removes it from the computer completely. Be careful â€" you cannot undo this."

G. INSTRUCTOR DEMONSTRATION (15 minutes)

Demonstration 1: Creating a Folder Structure (5 minutes)

What the Instructor Prepares:

- File Explorer open on the projector

- The Desktop selected

What the Instructor Says and Does: "I am going to create a folder structure for a small business. The business is called 'Adaeze's Fashion Design.' She needs folders for Invoices, Designs, Customer Records, and Receipts."

1. "I right-click on the Desktop, click 'New,' then 'Folder.' A new folder appears. I type 'Adaeze's Fashion Design' and press Enter."
2. "Now I double-click on the folder to open it. Inside, I create four sub-folders: 'Invoices,' 'Designs,' 'Customer Records,' and 'Receipts.'"
3. "I right-click, click 'New,' then 'Folder.' I type 'Invoices' and press Enter. I repeat for the other three."
4. "Now I have a folder structure. The main folder is 'Adaeze's Fashion Design.' Inside it are four sub-folders. This is how a professional organises their work."

What Learners Should Observe: The instructor creating a main folder and four sub-folders, with clear, descriptive names.

Expected Result: Learners can describe the folder structure and explain why it is organised this way.

Questions the Instructor Can Ask:

- "Why did I put the sub-folders inside the main folder instead of on the Desktop?" (Answer: So everything is in one place and easy to find.)
- "What would happen if I named the folders 'Folder 1,' 'Folder 2,' etc.?" (Answer: No one would know what is inside them.)

Demonstration 2: Saving a File in a Folder (5 minutes)

What the Instructor Prepares:

- Notepad open on the projector
- The "Adaeze's Fashion Design" folder created in Demonstration 1

What the Instructor Says and Does: "I am going to type a short note and save it in the 'Invoices' folder."

1. "I type: 'Invoice #001 â€" Adaeze's Fashion Design â€" â‚¦15,000 â€" Paid.'"
2. "I click 'File,' then 'Save As.'"
3. "In the dialog box, I navigate to the Desktop, then double-click 'Adaeze's Fashion Design,' then double-click 'Invoices.'"
4. "I type 'Invoice 001' in the 'File name' box."
5. "I click 'Save.'"
6. "Now the file is saved in the right place. If I need to find it later, I know exactly where to look: Desktop > Adaeze's Fashion Design > Invoices > Invoice 001."

What Learners Should Observe: The instructor navigating to the correct folder and giving the file a descriptive name.

Expected Result: Learners can describe the steps to save a file in a specific folder.

Common Errors and Corrections:

- If the learner saves the file on the Desktop instead of in the folder: "Check the address bar at the top of the Save dialog. Does it say 'Desktop' or 'Invoices'? If it says Desktop, navigate to the Invoices folder before saving."
- If the learner gives the file a vague name: "What is this file about? Put that in the name. 'Invoice 001' is better than 'New File.'"

Demonstration 3: Moving and Copying Files (5 minutes)

What the Instructor Prepares:

- A few sample files on the Desktop
- The "Adaeze's Fashion Design" folder

What the Instructor Says and Does: "I have three files on the Desktop. I want to move two of them into the 'Customer Records' folder and copy one into the 'Designs' folder."

1. "I right-click on the first file, click 'Cut,' navigate to 'Customer Records,' right-click in the folder, and click 'Paste.' The file moved."
2. "I right-click on the second file, click 'Cut,' navigate to 'Customer Records,' right-click, and click 'Paste.' That file moved too."

3. "Now I want to copy the third file into 'Designs.' I right-click, click 'Copy,' navigate to 'Designs,' right-click, and click 'Paste.' The file is now in both places â€" the original is still on the Desktop, and a copy is in 'Designs.'"

What Learners Should Observe: The difference between Cut (move) and Copy (duplicate).

Expected Result: Learners can explain the difference between moving and copying a file.

Questions the Instructor Can Ask:

- "What is the difference between Cut and Copy?" (Answer: Cut removes the file from the original location. Copy leaves the original and creates a duplicate.)
- "How can you move a file without using the right-click menu?" (Answer: Drag-and-drop.)

H. GUIDED PRACTICAL EXERCISE (20 minutes)

Exercise: "Build My Filing System"

Practical Objective: The learner will create a folder structure for a fictional small business, save files in the appropriate folders, and practise moving, copying and deleting files.

Starting Materials:

- A "Messy Files" folder on the Desktop containing 20 mixed files
- Notepad open

Instructions:

Part 1: Create the Folder Structure (5 minutes)

1. "Right-click on the Desktop. Click 'New,' then 'Folder.' Name it 'My Business.'"
2. "Double-click on 'My Business' to open it."
3. "Inside 'My Business,' create four sub-folders: 'Documents,' 'Images,' 'Media,' and 'Archives.'"
4. "Your folder structure should look like this:
    - Desktop
        - My Business
            - Documents
            - Images
            - Media
            - Archives"

Instructor Prompts:

- "Why do we put the sub-folders inside 'My Business' instead of directly on the Desktop?" (Answer: So everything is in one place.)
- "What is the difference between 'Documents' and 'Archives'?" (Answer: Documents are current, active files. Archives are old files you want to keep but do not need often.)

Part 2: Sort the Messy Files (10 minutes)

5. "Open the 'Messy Files' folder on the Desktop. You will see 20 files."
6. "Your task is to sort these files into the correct folders. Use the file type to decide where each file goes:
    - Documents (.txt, .docx, .xlsx, .pdf) go in 'Documents'
    - Images (.jpg, .png) go in 'Images'
    - Videos (.mp4) and audio (.mp3) go in 'Media'
    - Everything else goes in 'Archives'"
7. "To move a file: right-click, click 'Cut,' navigate to the destination folder, right-click, click 'Paste.' Or use drag-and-drop."
8. "Sort all 20 files. When you finish, the 'Messy Files' folder should be empty."

Instructor Prompts:

- "Where does a .jpg file go?" (Answer: In 'Images.')

- "Where does a .mp4 file go?" (Answer: In 'Media.')
- "What if you are not sure where a file goes?" (Answer: Look at the file type. If it is still unclear, put it in 'Archives.')

Part 3: Save a File in the Right Folder (5 minutes)

9. "Open Notepad. Type: 'This is a test file for my business. It was created during CEA Session 3.'"
10. "Click 'File,' then 'Save As.'"
11. "Navigate to Desktop > My Business > Documents."
12. "Name the file 'Test File' and click 'Save.'"
13. "Now open File Explorer and verify that the file is in the right place."

Instructor Prompts:

- "How do you know the file was saved in the right place?" (Answer: Open File Explorer and navigate to the folder. The file should be there.)
- "What would happen if you saved it on the Desktop instead?" (Answer: It would be mixed in with everything else and hard to find later.)

Expected Result: Every learner has created a folder structure, sorted 20 files into the correct folders, and saved a Notepad file in the correct location.

Troubleshooting Guidance:

- If the learner cannot find the "Messy Files" folder: "Look on the Desktop. It should be there. If not, ask the instructor to copy it to your Desktop."
- If the learner accidentally deletes a file: "Do not panic. Open the Recycle Bin, right-click on the file, and click 'Restore.'"
- If the learner cannot move a file: "Make sure you are right-clicking on the file itself, not on empty space. Then click 'Cut.' Navigate to the destination folder, right-click in an empty space, and click 'Paste.'"

Completion Checklist:

- ☐ Created a main folder called "My Business" on the Desktop
- ☐ Created four sub-folders: Documents, Images, Media, Archives
- ☐ Sorted all 20 files from "Messy Files" into the correct folders
- ☐ Saved a Notepad file called "Test File" in the Documents folder
- ☐ Verified the file is in the correct location using File Explorer

---

I. INDEPENDENT CLASS EXERCISE (10 minutes)

Exercise: "Organise My Documents"

Scenario: "You are helping your aunt, who runs a small restaurant in Port Harcourt. She has a computer, but she saves everything on the Desktop. Her Desktop is covered with files â€" recipes, supplier invoices, customer lists, photos of dishes, music for the restaurant. She cannot find anything. She asks you to help her organise her files."

Task: Without looking at your notes or your neighbour's screen, write down (on a piece of paper or in Notepad) the answers to these questions:

1. What is the difference between a file and a folder?
2. What are three good folder names for a restaurant business?
3. What are the steps to create a new folder on the Desktop?
4. What are the steps to move a file from the Desktop into a folder?
5. What is the Recycle Bin, and why is it useful?

Requirements:

- Write in full sentences where possible
- You may look at the computer in front of you for reference
- You may NOT look at another learner's paper

Time Allowance: 10 minutes

Success Criteria:

- All five questions answered correctly
- At least three answers written in complete sentences
- The learner can explain their answers to a partner

Hints Available If the Learner Gets Stuck:

- Hint 1: "A file is a single piece of information. A folder is a container for files."
- Hint 2: "Think about what a restaurant needs: recipes, invoices, customer lists, photos."
- Hint 3: "Right-click on the Desktop, click New, then Folder."

Complete Answer Key for the Instructor:

1. **What is the difference between a file and a folder?**
   - A file is a single piece of information (a document, image, video, etc.). A folder is a container that holds files and other folders.
2. **What are three good folder names for a restaurant business?**
   - Examples: "Recipes," "Supplier Invoices," "Customer Lists," "Photos of Dishes," "Music," "Staff Records." (Any three descriptive, relevant names are acceptable.)
3. **What are the steps to create a new folder on the Desktop?**
   - Right-click on an empty space on the Desktop. Click "New." Click "Folder." Type a name and press Enter.
4. **What are the steps to move a file from the Desktop into a folder?**
   - Right-click on the file. Click "Cut." Open the destination folder. Right-click in an empty space. Click "Paste." (Alternatively, drag the file into the folder.)
5. **What is the Recycle Bin, and why is it useful?**
   - The Recycle Bin is where deleted files are stored temporarily. It is useful because you can restore a file if you delete it by mistake.

J. REAL-WORLD CASE STUDY (5 minutes)

Case: "Ngozi's Organised Business"

Situation: Ngozi runs a small catering business in Port Harcourt. She has a laptop that she uses for everything â€" recipes, customer orders, invoices, photos of her dishes, music for events. But she has never organised her files. Everything is on the Desktop. She has over 100 files and cannot find anything.

One day, a client calls and asks for a copy of an invoice from three months ago. Ngozi spends two hours searching through her Desktop. She cannot find it. The client gets frustrated and takes their business elsewhere. Ngozi loses â‚¦50,000.

The Problem: Ngozi's files are not organised. She has no folder structure. She wastes time looking for things. She loses clients and money because of this.

Why It Matters: In a professional workplace, time is money. If you spend two hours looking for a file, you have wasted two hours of productive work. Multiply that by every day, every week, and it adds up to thousands of naira lost. Good file organisation is not just a convenience â€" it is a professional necessity.

Relevant Concept: Folder structure and file management. If Ngozi had a folder structure â€" "Invoices," "Recipes," "Customer Orders," "Photos" â€" she would find any file in seconds.

Worked Solution: If Ngozi had taken this course, here is what she would do:

1. She would create a main folder called "Ngozi's Catering Business."
2. Inside it, she would create sub-folders: "Invoices," "Recipes," "Customer Orders," "Photos," "Music."
3. She would sort all 100 files into the correct folders.
4. When a client asks for an invoice, she navigates to "Invoices" and finds it in seconds.
5. She saves time, looks professional, and keeps her clients happy.

Reasoning: Good file organisation is like good hygiene. No one notices when it is there, but everyone notices when it is not. It is a basic professional skill that separates organised people from chaotic people.

Possible Mistake: Ngozi might create too many folders. For example, she might create a separate folder for each client. This makes the structure too complex and hard to navigate.

Correction: Keep the structure simple. Use broad categories (Invoices, Recipes, Photos) rather than specific ones (Invoice to Client A, Invoice to Client B). You can always add more folders later if needed.

Transfer Exercise: "Your friend Emeka is a freelance photographer. He has 500 photos on his computer, all in one folder. He cannot find anything. What folder structure would you recommend?"

Professional Connection: Every office job requires file management. Administrators, accountants, teachers, receptionists, managers â€" everyone needs to organise their digital work. This is one of the most basic and most important professional skills.

K. COMMON MISTAKES AND TROUBLESHOOTING (5 minutes)

Mistake 1: Saving Everything on the Desktop

Symptoms: The learner saves every file on the Desktop. After a few weeks, the Desktop is covered with files. **Likely Cause:** The learner does not know how to navigate to other folders when saving. **How to Investigate:** Look at the learner's Desktop. Is it covered with files? **Safe Corrective Steps:** Teach the learner to use the "Save As" dialog to navigate to the correct folder. Show them how to click on "Documents" or "This PC" in the navigation pane. **How to Confirm the Problem Is Resolved:** The learner saves files in the appropriate folders, not on the Desktop. **How to Prevent Recurrence:** At the start of every session, ask the learner where they saved their last file. If they say "Desktop," remind them to use the correct folder.

Mistake 2: Using Vague File Names

Symptoms: The learner names files "Document1," "New File," "Untitled," etc. **Likely Cause:** The learner does not think about the file's content when naming it. **How to Investigate:** Look at the learner's file names. Are they descriptive? **Safe Corrective Steps:** Teach the learner to ask themselves: "What is this file about?" The answer should be the file name. For example, "Letter to Bank" instead of "Document1." **How to Confirm the Problem Is Resolved:** The learner uses descriptive file names. **How to Prevent Recurrence:** At the start of every session, ask the learner to name a file they created. If the name is vague, ask them to rename it.

Mistake 3: Deleting Files Permanently by Accident

Symptoms: The learner deletes a file and it is gone forever. They cannot restore it. **Likely Cause:** The learner emptied the Recycle Bin without checking what was inside. **How to Investigate:** Ask the learner, "Did you empty the Recycle Bin?" **Safe Corrective Steps:** Teach the learner to always check the Recycle Bin before emptying it. Show them how to restore a file from the Recycle Bin. **How to Confirm the Problem Is Resolved:** The learner checks the Recycle Bin before emptying it. **How to Prevent Recurrence:** Remind the learner at the start of every session: "The Recycle Bin is your safety net. Do not empty it unless you are sure you do not need anything inside."

Mistake 4: Creating Too Many Folders

Symptoms: The learner creates a separate folder for every file. They have 50 folders and 50 files. **Likely Cause:** The learner does not understand that folders are for grouping related files. **How to Investigate:** Look at the learner's folder structure. Are there too many folders? **Safe Corrective Steps:** Teach the learner to use broad categories. For example, instead of "Invoice to Client A," "Invoice to Client B," "Invoice to Client C," use one folder called "Invoices." **How to Confirm the Problem Is Resolved:** The learner uses a simple, logical folder structure. **How to Prevent Recurrence:** Show the learner examples of good folder structures and explain the principle of grouping related files.

Mistake 5: Not Saving Work

Symptoms: The learner types a document but does not save it. The computer crashes and the work is lost. **Likely Cause:** The learner forgets to save or does not know how. **How to Investigate:** Ask the learner, "Did you save your work?" **Safe Corrective Steps:** Teach the learner to save early and often. Use Ctrl+S every few minutes. Explain that the computer can crash at any time and unsaved work is lost. **How to Confirm the Problem Is Resolved:** The learner saves their work regularly. **How to Prevent Recurrence:** Remind the learner at the start of every session: "Save early, save often. Ctrl+S is your best friend."

L. SESSION ASSIGNMENT (5 minutes)

Assignment Title: "Organise My Documents"

Purpose: To reinforce file and folder management skills by having the learner organise a messy folder of files into a logical structure.

Realistic Scenario: "Your friend Chika has a folder on her computer called 'Stuff.' Inside 'Stuff' are 20 files â€" documents, images, videos, and audio files â€" all mixed up. She cannot find anything. She asks you to help her organise the files. You will do this on the academy machine and show her the result."

Detailed Instructions:

1. Open the "Messy Files" folder on the Desktop (the instructor will provide this).
2. Create a new folder on the Desktop called "Chika's Organised Files."
3. Inside "Chika's Organised Files," create four sub-folders: "Documents," "Images," "Media," and "Archives."
4. Sort all 20 files from "Messy Files" into the correct sub-folders.
5. When you finish, the "Messy Files" folder should be empty.
6. Open File Explorer and take a screenshot (or write down) the final folder structure.
7. Show the completed folder structure to the instructor before leaving.

Required Deliverables:

- A folder called "Chika's Organised Files" on the Desktop
- Four sub-folders: Documents, Images, Media, Archives
- All 20 files sorted into the correct sub-folders
- The "Messy Files" folder is empty

Submission Format:

- The folder structure must be visible on the Desktop of the academy machine
- The learner must show the instructor the completed structure before leaving

Deadline Recommendation:

- Before leaving the session (in-class assignment)

Marking Rubric:

Criterion	Excellent (5)	Good (3)	Needs Improvement (1)
Main folder created	"Chika's Organised Files" created on Desktop	Created but wrong name or location	Not created
Four sub-folders created	All four created with correct names	Three created	Two or fewer created
Files sorted correctly	All 20 files in correct folders	15â€"19 files correct	Fewer than 15 correct
Messy Files folder empty	Completely empty	A few files remaining	Many files remaining
Folder structure logical	Clear, easy to navigate	Mostly logical	Confusing or inconsistent

Total: 25 marks

Common Mistakes to Avoid:

- Creating the sub-folders on the Desktop instead of inside the main folder
- Putting files in the wrong folders (e.g., a video in "Documents")
- Not emptying the "Messy Files" folder completely
- Using vague folder names (e.g., "Folder 1," "Folder 2")

Instructor Reference Solution:

The final folder structure should look like this:

- Desktop
  - Chika's Organised Files
    - Documents (contains .txt, .docx, .xlsx, .pdf files)
    - Images (contains .jpg, .png files)
    - Media (contains .mp4, .mp3 files)
    - Archives (contains all other files)
  - Messy Files (empty)

M. KNOWLEDGE CHECK (5 minutes)

Questions

1. Multiple Choice: What is the difference between a file and a folder? a) A file is a container, and a folder is a single piece of information b) A file is a single piece of information, and a folder is a container c) A file and a folder are the same thing d) A folder is a type of file

Answer: b) A file is a single piece of information, and a folder is a container

2. Short Answer: What are three good file types and what program opens each one?

Answer: .txt (Notepad), .docx (Microsoft Word), .jpg (photo viewer), .mp4 (media player), .mp3 (music player). (Any three correct pairs are acceptable.)

3. Multiple Choice: What happens when you delete a file? a) It is gone forever b) It goes to the Recycle Bin c) It is moved to the Desktop d) It is copied to the clipboard

Answer: b) It goes to the Recycle Bin

4. Explain in Your Own Words: Why is it important to use descriptive file and folder names?

Answer: Descriptive names tell you what is inside a file or folder without opening it. This makes it easy to find things quickly. Vague names like "Document1" or "Stuff" do not help you find anything.

5. Practical Identification: Create a new folder on the Desktop called "Test Folder." Then rename it to "CEA Test."

Answer: The learner successfully creates and renames the folder.

6. Scenario-Based: Your friend says, "I saved my file but I cannot find it. Where did it go?" What are two things you would tell your friend to check?

Answer: (1) Check the Desktop â€" the file might be there. (2) Open File Explorer and search for the file name in the search box.

7. Error-Detecting: A learner writes in their assignment: "I moved the file by clicking Copy and then Paste." What is wrong with this, and what should they write instead?

Answer: Copy and Paste creates a duplicate. The original file stays in the original location. To move a file, the learner should use Cut and Paste (or drag-and-drop).

N. REFLECTION AND RECAP (5 minutes)

Plain-English Summary

Today you learned how to manage files and folders on a computer. You learned what a file is, what a folder is, and why folders are important. You learned how to create folders, name them, rename them, and organise them into a logical structure. You learned how to save files in the right place, move files between folders, copy files, and delete files. You also learned about the Recycle Bin and how to restore deleted files. Most importantly, you organised a messy folder of 20 files into a clean, logical structure. This is a skill you will use every single day of your digital life.

Five Important Takeaways

1. A file is a single piece of information. A folder is a container for files.

2. Good file and folder names are descriptive, short and consistent.
3. Save files in the appropriate folder â€" not on the Desktop.
4. Use Cut to move a file and Copy to duplicate a file.
5. The Recycle Bin is your safety net. Check it before emptying.

Questions That Help You Recognise What You Can Now Do

- Can you explain the difference between a file and a folder?
- Can you create a new folder and give it a meaningful name?
- Can you save a file in a specific folder?
- Can you move a file from one folder to another?
- Can you restore a deleted file from the Recycle Bin?

Connection to the Next Session

This was the last session of Week 1. You have now learned the physical skills â€" how to use the computer, keyboard and mouse â€" and the organisational skills â€" how to manage files and folders. In Week 2, you will learn how to use the internet safely and how to communicate through email. These are the skills that will make you truly digitally independent. You are halfway there. Well done.

O. INSTRUCTOR EVALUATION NOTES

Observable Signs of Competence

- The learner can explain the difference between a file and a folder.
- The learner creates folders with descriptive names.
- The learner saves files in the correct folders.
- The learner moves, copies and deletes files confidently.
- The learner restores a file from the Recycle Bin.
- The learner organises a messy folder into a logical structure.

Common Misconceptions

- **"A folder is a type of file."** Some learners think folders and files are the same thing. Correct this by explaining that a folder is a container, not a file.
- **"Deleting a file removes it forever."** Some learners do not know about the Recycle Bin. Show them how to restore a deleted file.
- **"The Desktop is the best place to save files."** Some learners save everything on the Desktop. Explain why this is a bad habit and how to save in the correct folders.

Suggested Remedial Exercises

- For learners who cannot remember the difference between Cut and Copy: Give them a file and ask them to move it. Then give them another file and ask them to copy it. Repeat until they can do both without thinking.
- For learners who use vague file names: Give them five files with vague names and ask them to rename them with descriptive names.
- For learners who cannot navigate File Explorer: Sit with them and guide them through the navigation pane. Show them how to click on Desktop, Documents, and This PC.

Differentiation Guidance

Level 1 â€" Supported (for learners who struggle):

- Provide a printed folder structure diagram for reference.
- Pair with a more confident learner for practical exercises.
- Allow extra time for the independent exercise.

- Focus on creating and naming folders before moving files.

Level 2 â€” Independent (standard):

- Complete all exercises as written.
- Answer all knowledge check questions.
- Complete the assignment to the standard shown in the rubric.

Level 3 â€” Challenge (for learners who finish early):

- Ask the learner to create a folder structure for a fictional school (e.g., "Primary School" with sub-folders for each class).
- Ask the learner to explain the difference between a file extension and a file name.
- Ask the learner to research what a "file path" is and write a one-sentence explanation.

End of Session 3 â€” End of Week 1

Next Session: Session 4 â€” The Internet & Safe Browsing (Week 2) **What to Bring:** Curiosity, caution, willingness to explore **Preparation:** Bookmark specific websites for practice, prepare scam identification scenarios, test download links

---

WEEK 1 COMPLETENESS CHECK

Completed Deliverables

- [x] Session 1: Understanding the Computer â€” full teaching materials
- [x] Session 2: Keyboard, Mouse & Typing Foundations â€” full teaching materials
- [x] Session 3: Files, Folders & the Digital Workplace â€” full teaching materials

Outstanding Deliverables

- [ ] Week 2: Sessions 4, 5, 6 â€” full teaching materials
- [ ] Part 3: Learner Workbook â€” worksheets, exercises, assignment briefs
- [ ] Part 4: Instructor Manual â€” teaching guidance, answer keys, rubrics
- [ ] Part 5: Practical Lab Pack â€” datasets, scenario cards, starter files
- [ ] Part 6: Capstone Project Pack â€” full brief, milestones, assessment criteria
- [ ] Part 7: Final Quality Assurance â€” audit of entire curriculum

Next Session to Develop

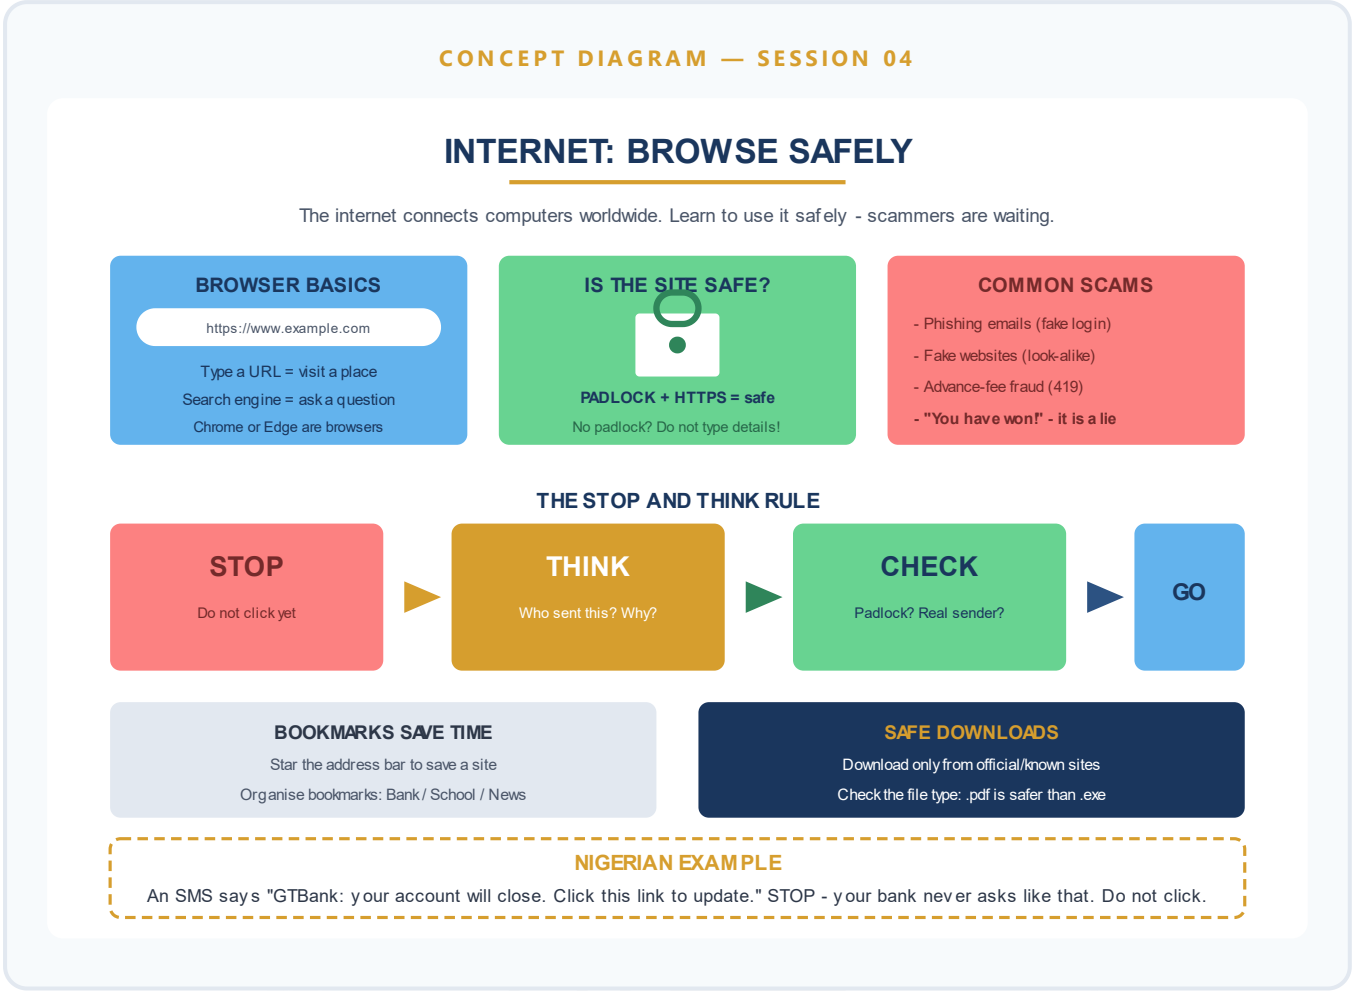

Session 4 â€” The Internet & Safe Browsing

Decisions and Terminology to Maintain Consistency

- Session length: 105 minutes
- Sessions per week: 3
- Total sessions: 6
- Course duration: 2 weeks
- Login credentials: username "Learner," password "Cea2026!"
- Typing speed measured in WPM (words per minute)
- File types: .txt, .docx, .xlsx, .jpg, .png, .mp4, .mp3, .pdf
- Keyboard shortcuts: Ctrl+C, Ctrl+V, Ctrl+Z, Ctrl+S
- Home row: A S D F (left hand), J K L ; (right hand)
- Folder structure principle: broad categories, descriptive names, logical hierarchy
- Assessment framework: Level 1 (Know), Level 2 (Do), Level 3 (Create)
- Capstone: Demonstrated Independence â€” unaided practical workflow

SESSION 04 OF 6

Internet Safe Browsing

SESSION 4: THE INTERNET & SAFE BROWSING

Week: 2 **Module:** Digital Independence **Duration:** 105 minutes **Difficulty:** Beginner **Prerequisite Knowledge:** Sessions 1â€“3 â€” full computer operation, file management, typing **Connection to Previous Session:** Learners have mastered the local machine; this session extends their reach to the internet, the most powerful and most dangerous tool they will use **Preparation Required Before Class:**

- Bookmark specific websites for practice (e.g., a Nigerian news site, a product page, a government website)
- Prepare scam identification scenarios (printed or projected)
- Test all download links to ensure they work
- Ensure academy Wi-Fi is functional on all machines
- Prepare "Safe vs Unsafe Website" comparison slides or handouts

A. SESSION IDENTIFICATION

Field	Detail
Session Number	4

Field	Detail
Title	The Internet & Safe Browsing
Week	2
Module	Digital Independence
Duration	105 minutes
Difficulty	Beginner
Prerequisite Knowledge	Sessions 1â€"3 â€" full computer operation, file management, typing
Connection to Previous Session	Builds on Sessions 1â€"3 by extending the learner's reach from the local machine to the global internet
Preparation	Bookmarked websites, scam scenarios, tested download links, functional Wi-Fi

B. LEARNING OUTCOMES

By the end of this session, the learner will be able to:

1. **Explain what the internet is** in simple terms and how it differs from the World Wide Web.
2. **Open a web browser** (Chrome or Edge) and navigate to a website by typing a URL.
3. **Distinguish between typing a URL and using a search engine.**
4. **Use a search engine effectively** by typing clear, specific queries.
5. **Identify safe and unsafe downloads** by examining file types, sources and website credibility.
6. **Recognize common online scams** including phishing emails, fake websites and advance-fee fraud.
7. **Identify a secure website** by looking for the padlock icon and HTTPS in the address bar.
8. **Create and use bookmarks** to save frequently visited websites.
9. **Explain basic digital safety habits** that protect them and their information online.
10. **Apply the "stop and think" rule** before clicking links, downloading files or sharing personal information.

C. REQUIRED MATERIALS

Hardware:

- One desktop computer per learner
- One keyboard per learner
- One mouse per learner
- One monitor per learner

Software:

- Windows 10 or Windows 11
- Google Chrome or Microsoft Edge web browser (pre-installed)

Internet:

- Academy Wi-Fi (required for this session)
- Pre-bookmarked websites:
  - A Nigerian news site (e.g., punchng.com or guardian.ng)
  - A product page (e.g., jumia.com.ng or konga.com)
  - A government website (e.g., nigeria.gov.ng)
  - A practice download link (provided by instructor)

Printed Materials:

- "Safe vs Unsafe Website" comparison handout (one per learner)
- Scam identification scenario cards (one set per learner)

Teaching Aids:

- A whiteboard or flip chart for drawing the "internet as a road" analogy
- Projected examples of real and fake websites

Alternative for Learners Without Internet: The instructor demonstrates on the projector while learners follow along on printed screenshots. Learners complete the practical exercises when internet is available.

D. OPENING ACTIVITY (10 minutes)

The "Road Trip" Analogy

Instructor Setup: Draw a simple map on the whiteboard: a house in the centre, with roads leading to different buildings (a bank, a market, a school, a library, a stranger's house).

Instructor Script: "Good morning, everyone. Welcome to Week 2. Today we are going to explore the internet. But before we go online, I want you to imagine something.

Imagine you are in a new city. You have a car and a tank full of fuel. You can drive anywhere. There are roads to a bank, a market, a school, a library â€" all the places you need. But there are also roads to places you should not go: a stranger's house, a dark alley, a building with a sign that says 'Free Money Inside.'

The internet is like that city. It is a network of roads connecting millions of computers. You can drive to any website in the world. But just like in a real city, there are safe places and dangerous places. Today, you will learn how to tell the difference.

Look at this map. [Point to the whiteboard.] This house is your computer. These roads are the internet. These buildings are websites. Your job is to learn which roads to take and which to avoid. Let us begin."

Expected Learner Response: Recognition that they have already encountered some of these "roads" (perhaps on their phones). Curiosity about how to tell the difference between safe and unsafe.

E. PREREQUISITE REVIEW (5 minutes)

Instructor Script: "Before we go online, let us remember what we learned in Week 1. Quick review."

Review Questions and Expected Answers:

1. "What are the five main parts of a computer?"
    - Monitor, keyboard, mouse, system unit (CPU), speakers.
2. "Where do your fingers rest on the keyboard?"
    - On the home row: A S D F (left hand) and J K L ; (right hand).
3. "What does Ctrl+S do?"
    - It saves the current work.
4. "What is the difference between a file and a folder?"
    - A file is a single piece of information. A folder is a container for files.
5. "What is the correct way to shut down a computer?"
    - Click Start, click Power, click Shut down.

How to Address Common Gaps:

- If a learner cannot remember the home row, ask a partner to show them.
- If a learner forgot how to save a file, remind them: Ctrl+S.
- If a learner is still struggling with the mouse, pair them with a more confident learner for the first practical exercise.

F. FULL LECTURE NOTES (35 minutes)

Topic 1: What Is the Internet? (5 minutes)

Instructor Script: "The internet is a giant network of connected computers. It connects millions of computers all over the world. When you go online, your computer is connected to this network. You can send messages, share files, watch videos and access information from any computer that is also connected.

The Internet vs The World Wide Web: People often say 'internet' when they mean 'the web.' They are not the same thing.

- The **internet** is the network â€" the cables, satellites and computers that connect everything.
- The **World Wide Web** (or just 'the web') is the collection of websites and pages that you access through the internet.

Think of it this way: the internet is the road system. The web is the buildings along the roads. You need the roads to reach the buildings, but the roads and the buildings are not the same thing.

How Does It Work? When you type a website address into your browser, your computer sends a request through the internet to the computer that hosts that website. That computer sends the website back to you. This happens in seconds. It is like sending a letter, but much, much faster.

A Brief History: The internet was invented in the 1960s by the United States military. It was originally called ARPANET. In the 1990s, it became available to the public. The World Wide Web was invented in 1989 by a man named Tim Berners-Lee. He wanted a way for scientists to share documents. He created the first web browser and the first website. The rest is history."

Topic 2: Browsers and the Address Bar (10 minutes)

Instructor Script: "A browser is a program that lets you view websites on the web. It is like a vehicle that drives you along the internet roads. The two most common browsers are Google Chrome and Microsoft Edge. Both are free and pre-installed on most computers.

Opening a Browser:

1. Look at the taskbar at the bottom of the screen.
2. Find the browser icon. Chrome is a circle with red, yellow, green and blue. Edge is a blue and green wave.
3. Click it once. The browser opens.

The Address Bar: At the top of the browser, there is a long box. This is the address bar. This is where you type the address of the website you want to visit. The address is called a URL (Uniform Resource Locator). A URL is like a street address â€" it tells the browser exactly where to go.

For example:

- `google.com` takes you to Google
- `punchng.com` takes you to Punch newspaper
- `jumia.com.ng` takes you to Jumia

Typing a URL:

1. Click in the address bar.
2. Type the URL (e.g., `google.com`).
3. Press Enter.
4. The browser takes you to that website.

Tabs: A browser can have multiple tabs open at the same time. Each tab is like a separate page. You can open a new tab by clicking the plus (+) icon next to the existing tab. You can switch between tabs by clicking on them. This is useful when you want to keep multiple websites open at once.

The Back, Forward and Refresh Buttons:

- The **back button** (left arrow) takes you to the previous page you visited.
- The **forward button** (right arrow) takes you to the next page.
- The **refresh button** (circular arrow) reloads the current page. Use this if a page is not loading correctly."

Topic 3: Search Engines (10 minutes)

Instructor Script: "A search engine is a website that helps you find other websites. It is like a librarian â€" you tell it what you are looking for, and it shows you a list of results.

The most popular search engine is Google. Others include Bing, Yahoo and DuckDuckGo. We will use Google in this course.

How to Search:

1. Go to `google.com` (or click the Google search bar if it is your homepage).
2. Type what you are looking for in the search box.
3. Press Enter.
4. Google shows you a list of results. Each result has a title, a short description and a URL.

Search Tips:

- **Be specific.** Instead of typing 'shoes,' type 'buy black leather shoes in Port Harcourt.' The more specific your search, the better the results.
- **Use quotes for exact phrases.** If you are looking for an exact phrase, put it in quotes. For example, `"Cyber Elias Academy Port Harcourt"` will find pages with that exact phrase.
- **Use simple words.** Google does not understand complex sentences. Use simple keywords. For example, instead of typing 'Where can I find a good restaurant in Port Harcourt?' type 'restaurant Port Harcourt.'
- **Check the URL.** Before clicking a result, look at the URL. Does it match what you are looking for? If you searched for 'Jumia' and the result says `jumia.com.ng`, that is probably correct. If it says `jumia-discounts-scam.com`, be careful.

Common Mistake â€" Clicking the First Result: Many people click the first result without reading it. This is a mistake. The first result is not always the best. Sometimes it is an advertisement. Always read the title and description before clicking.

Google Search Results Page: At the top of the results, you may see results labelled 'Ad.' These are advertisements. They are not organic search results. They are paid for by companies. They may or may not be relevant to your search. Below the ads, you will see the organic results. These are the actual search results."

Topic 4: Safe vs Unsafe Downloads (5 minutes)

Instructor Script: "One of the most dangerous things you can do online is download a file from an untrusted source. A download is when you save a file from the internet to your computer. It could be a document, an image, a program or anything else.

Safe Downloads:

- Downloads from official websites (e.g., Microsoft.com, Adobe.com)
- Downloads from trusted sources (e.g., your bank's website, your school's portal)
- Files with common, safe extensions (.pdf, .docx, .jpg, .png, .mp3, .mp4)

Unsafe Downloads:

- Downloads from pop-up windows that say 'Your computer is infected! Click here to fix it!'
- Downloads from websites you have never heard of
- Files with dangerous extensions (.exe, .bat, .scr, .zip from unknown sources)
- Downloads that arrive as email attachments from people you do not know

The Golden Rule: If you did not go looking for a file, do not download it. If a pop-up tells you to download something, close the pop-up. If an email tells you to download an attachment, do not download it unless you are expecting it and you trust the sender.

How to Download Safely:

1. Go to the official website of the company or organisation.
2. Look for a 'Downloads' or 'Resources' section.
3. Click the download link.
4. The file will be saved to your Downloads folder.
5. Open the file and verify it is what you expected.

Virus Scanners: A virus scanner is a program that checks files for malware (malicious software). Windows comes with a built-in virus scanner called Windows Defender. It runs automatically in the background. You do not need to do anything â€" it is always working. But it is not perfect. The best protection is you â€" do not download files from untrusted sources."

Topic 5: Recognizing Scams and Phishing (5 minutes)

Instructor Script: "A scam is a trick designed to steal your money or your information. Scams have existed for thousands of years. The internet has made them easier to spread and harder to detect.

Common Online Scams:

1. Advance-Fee Fraud (419): Someone contacts you and says you have won a lottery, inherited money from a distant relative, or been selected for a business opportunity. But there is a catch â€" you need to pay a small fee first. You pay the fee. They disappear. Your money is gone. This is called advance-fee fraud because you pay the fee in advance.

2. Phishing: Phishing is when a scammer pretends to be a trusted organisation (your bank, your employer, a government agency) and tricks you into giving them your password, PIN or personal information. They usually do this through a fake website or a fake email.

For example, you receive an email that looks like it is from your bank. It says: 'Your account has been compromised. Click here to verify your identity.' The link takes you to a fake website that looks exactly like your bank's website. You enter your password. The scammer now has your password and can access your real account.

3. Fake Online Stores: A scammer creates a website that looks like a legitimate online store. It advertises products at very low prices. You pay, but the products never arrive. The website disappears.

4. Romance Scams: A scammer creates a fake profile on a dating site or social media. They build a relationship with you over weeks or months. Then they ask for money â€" for a medical emergency, for travel expenses, for a business opportunity. You send the money. They disappear.

How to Protect Yourself:

- **Stop and think.** Before you click a link, download a file or share personal information, stop and think. Is this legitimate? Does this make sense?
- **Check the sender.** If you receive an email from your bank, check the sender's email address. Is it from the real bank or from a fake address?
- **Never share your password.** No legitimate organisation will ever ask for your password by email or text message.
- **Use strong passwords.** Use a different password for every account. Use a mix of letters, numbers and symbols.
- **Trust your instincts.** If something feels wrong, it probably is.

The Most Important Rule: If it sounds too good to be true, it probably is. If someone is pressuring you to act quickly, stop and think. Scammers rely on urgency and emotion. Do not let them rush you."

G. INSTRUCTOR DEMONSTRATION (15 minutes)

Demonstration 1: Navigating to a Website (5 minutes)

What the Instructor Prepares:

- Chrome or Edge open on the projector
- The address bar visible

What the Instructor Says and Does: "I am going to navigate to a website by typing a URL. Watch carefully."

1. "I click in the address bar. I type `google.com`. I press Enter. Google loads."
2. "Now I will navigate to a different website. I click in the address bar. I type `punchng.com`. I press Enter. The Punch newspaper website loads."
3. "Now I will open a new tab. I click the plus (+) icon next to the current tab. A new tab opens. I type `jumia.com.ng`. Jumia loads."
4. "I switch back to the previous tab by clicking on it. I am back at Punch."

What Learners Should Observe: The instructor typing URLs into the address bar and navigating between websites and tabs.

Expected Result: Learners can navigate to a website by typing a URL.

Questions the Instructor Can Ask:

- "What is the difference between a URL and a search?" (Answer: A URL is a specific website address. A search is when you type keywords and the search engine shows you results.)
- "How do you open a new tab?" (Answer: Click the plus (+) icon next to the current tab.)

Demonstration 2: Using a Search Engine (5 minutes)

What the Instructor Prepares:

- Google open on the projector
- A few pre-planned search queries

What the Instructor Says and Does: "I am going to search for something on Google. Watch how I do it."

1. "I click in the Google search box. I type `Cyber Elias Academy Port Harcourt`. I press Enter. Google shows me results. I can see the CEA website in the results. I click on it. The CEA website loads."
2. "Now I will search for something more specific. I type `buy laptop under 100000 naira in Nigeria`. I press Enter. Google shows me results from Jumia, Konga and other stores."
3. "Now I will search for an exact phrase. I type `"best restaurants in Port Harcourt"` (with quotes). I press Enter. Google shows me pages that contain that exact phrase."

What Learners Should Observe: The instructor typing clear, specific queries and reading the results before clicking.

Expected Result: Learners can use a search engine effectively.

Common Errors and Corrections:

- If the learner types a full sentence: "Google does not understand full sentences. Use simple keywords. Instead of 'Where can I find a good restaurant in Port Harcourt?' type 'restaurant Port Harcourt.'"
- If the learner clicks the first result without reading: "Always read the title and description before clicking. Make sure the result is relevant to your search."

Demonstration 3: Identifying Safe vs Unsafe Websites (5 minutes)

What the Instructor Prepares:

- Two websites open in separate tabs: one legitimate (e.g., gtbank.com) and one fake (e.g., a projected screenshot of a phishing page)
- The padlock icon visible in the address bar

What the Instructor Says and Does: "I am going to show you how to tell if a website is safe or unsafe. Watch the address bar carefully."

1. "This is the real GTBank website. Look at the address bar. It says `gtbank.com`. Do you see the padlock icon? [Point to the padlock.] This padlock means the website is secure. It means the connection between your computer and the website is encrypted â€" no one can spy on it."
2. "Now look at this other website. [Switch to the fake tab.] It looks similar, but look at the address bar. It says `gtbank-verify-login.com`. That is not the real GTBank website. That is a fake website designed to steal your password. There is no padlock."
3. "Here is what to check:
    - **The URL:** Does it match the real website? Look for misspellings or extra words.
    - **The padlock:** Is there a padlock icon in the address bar? If not, the site is not secure.
    - **The design:** Does the website look professional? Are there spelling mistakes? These are signs of a scam."

What Learners Should Observe: The difference between a legitimate website (correct URL, padlock, professional design) and a fake website (wrong URL, no padlock, poor design).

Expected Result: Learners can identify safe and unsafe websites.

Questions the Instructor Can Ask:

- "What does the padlock icon mean?" (Answer: The website is secure. The connection is encrypted.)

- "How can you tell if a website is fake?" (Answer: Check the URL for misspellings, look for the padlock, check the design for mistakes.)

H. GUIDED PRACTICAL EXERCISE (20 minutes)

Exercise: "Internet Explorer"

Practical Objective: The learner will practise navigating to websites, using a search engine, identifying safe and unsafe websites, and creating bookmarks.

Starting Materials:

- Chrome or Edge open on each machine
- Academy Wi-Fi connected

Instructions:

Part 1: Navigate to Websites (5 minutes)

1. "Open your browser. Click in the address bar. Type `google.com` and press Enter."
2. "Now click in the address bar. Type `punchng.com` and press Enter. You are now on the Punch newspaper website."
3. "Now click in the address bar. Type `jumia.com.ng` and press Enter. You are now on Jumia."
4. "Open a new tab by clicking the plus (+) icon. Type `nigeria.gov.ng` and press Enter."
5. "Switch between your tabs by clicking on them. Close a tab by clicking the X on the tab."

Instructor Prompts:

- "What is the URL of the website you are currently on?" (Read it from the address bar.)
- "How do you go back to the previous page?" (Click the back button.)

Part 2: Use a Search Engine (5 minutes)

6. "Go to Google. In the search box, type `Cyber Elias Academy Port Harcourt` and press Enter."
7. "Look at the results. Find the CEA website. Click on it. You are now on the CEA website."
8. "Go back to Google. Type `typing practice free` and press Enter. Find a typing practice website. Open it in a new tab."
9. "Go back to Google. Type `"best newspapers in Nigeria"` (with quotes) and press Enter. Look at the results. How are they different from a search without quotes?"

Instructor Prompts:

- "What is the difference between searching with and without quotes?" (Answer: With quotes, Google finds pages with the exact phrase. Without quotes, Google finds pages with any of the words.)
- "How many results did Google find?" (Answer: Google shows the number of results at the top of the page.)

Part 3: Identify Safe and Unsafe Websites (5 minutes)

10. "Go to Google. Type `GTBank online banking` and press Enter. Find the real GTBank website. Click on it. Look at the address bar. Do you see the padlock?"
11. "Now I am going to show you a fake website. [The instructor projects a screenshot of a phishing page.] Look at the address bar. What is wrong?" (Answer: The URL is wrong. It is not gtbank.com.)
12. "Here is your challenge. I will describe a website. You tell me if it is safe or unsafe:
    - A website with the URL `paypal.com` and a padlock. (Safe.)
    - A website with the URL `paypa1.com` (with a number 1 instead of the letter l) and no padlock. (Unsafe.)
    - A website with the URL `amazon.com` and a padlock. (Safe.)
    - A website with the URL `arnazon.com` (with an r instead of an m) and no padlock. (Unsafe.)"

Instructor Prompts:

- "What are three things you should check before entering your password on a website?" (Answer: The URL, the padlock, and the design.)

Part 4: Create a Bookmark (5 minutes)

13. "Go to Google. Search for `Cyber Elias Academy`. Click on the CEA website."
14. "Now bookmark this page. Click the star icon in the address bar. A dialog box appears. Click 'Done.' The page is now bookmarked."
15. "To see your bookmarks, click the three dots in the top-right corner of the browser. Click 'Bookmarks.' You will see the CEA website in the list."

Instructor Prompts:

- "Why is it useful to bookmark a website?" (Answer: So you can find it again quickly without searching for it.)

Expected Result: Every learner has navigated to multiple websites, used a search engine, identified safe and unsafe websites, and created a bookmark.

Troubleshooting Guidance:

- If the learner cannot connect to the internet: "Check the Wi-Fi icon in the system tray (bottom-right corner). Is it connected? If not, ask the instructor for help."
- If a website does not load: "Try clicking the refresh button. If it still does not load, try a different website."
- If the learner cannot find the bookmark star: "It is in the address bar, on the right side. It looks like a star outline."

Completion Checklist:

- ☐ Navigated to at least three websites by typing URLs
- ☐ Opened and closed multiple tabs
- ☐ Used Google to search for specific information
- ☐ Identified safe and unsafe websites
- ☐ Created a bookmark for the CEA website

I. INDEPENDENT CLASS EXERCISE (10 minutes)

Exercise: "Internet Safety Detective"

Scenario: "You are helping your uncle, who runs a small business. He receives many emails every day. He is not sure which ones are safe and which ones are scams. He asks you to help him identify the safe and unsafe emails. Below are five email descriptions. For each one, decide if it is safe or unsafe, and explain why."

Task: Read each email description and write down:

1. Is it safe or unsafe?
2. Why?

Email Descriptions:

Email A: Subject: "Your GTBank account has been compromised" Sender: `security@gtbank-verify.com` Content: "Dear Customer, your account has been compromised. Click here to verify your identity. Enter your password and PIN to secure your account."

Email B: Subject: "Your Jumia order has been shipped" Sender: `no-reply@jumia.com.ng` Content: "Dear Customer, your order #12345 has been shipped. Track your order on our website."

Email C: Subject: "Congratulations! You have won â‚¦5,000,000" Sender: `winner@lottery-nigeria.com` Content: "Dear Lucky Winner, you have won â‚¦5,000,000 in our lottery. Pay â‚¦5,000 processing fee to claim your prize."

Email D: Subject: "Meeting reminder for tomorrow" Sender: `admin@yourcompany.com` Content: "Dear Staff, this is a reminder that the weekly meeting will hold tomorrow at 10am in the conference room."

Email E: Subject: "Your computer is infected!" Sender: `alert@security-alert.com` Content: "WARNING! Your computer is infected with 5 viruses! Click here now to download our free virus scanner and protect your computer."

Requirements:

- Write in full sentences where possible
- You may discuss with a partner, but write your own answers

Time Allowance: 10 minutes

Success Criteria:

- All five emails correctly identified as safe or unsafe
- At least three explanations that correctly identify the warning signs

Hints Available If the Learner Gets Stuck:

- Hint 1: "Check the sender's email address. Is it from the real organisation?"
- Hint 2: "Is the email asking you to click a link, download a file or share personal information?"
- Hint 3: "Does the email create a sense of urgency? Scammers often pressure you to act quickly."

Complete Answer Key for the Instructor:

Email A: Unsafe

- The sender's email address is `gtbank-verify.com`, not `gtbank.com`. This is a fake address.
- The email asks you to click a link and enter your password and PIN. A real bank will never ask for your password by email.
- This is a phishing attempt.

Email B: Safe

- The sender's email address is `jumia.com.ng`, which is the real Jumia domain.
- The email does not ask you to click a link or share personal information.
- It is a legitimate order confirmation.

Email C: Unsafe

- The sender's email address is `lottery-nigeria.com`, which is not a known lottery organisation.
- The email asks you to pay a "processing fee" to claim a prize. This is advance-fee fraud.
- You cannot win a lottery you did not enter.

Email D: Safe

- The sender's email address is `yourcompany.com`, which appears to be a legitimate company address.
- The email does not ask you to click a link, download a file or share personal information.
- It is a legitimate meeting reminder.

Email E: Unsafe

- The sender's email address is `security-alert.com`, which is not a known security organisation.
- The email creates a sense of urgency ("WARNING!").
- The email asks you to download a file. This file is likely malware.
- A real virus scanner will not alert you through a random email.

J. REAL-WORLD CASE STUDY (5 minutes)

Case: "Okonkwo's Costly Mistake"

Situation: Okonkwo is a trader in Port Harcourt. He has a smartphone and uses WhatsApp and Facebook, but he has never used a computer or email. One day, he receives an email on his phone. The email says it is from First Bank. It says his account has been restricted and he needs to click a link to restore access. Okonkwo clicks the link. The website looks exactly like First Bank. He enters his account number and PIN. Within minutes, â‚¦150,000 is withdrawn from his account.

The Problem: Okonkwo did not check the sender's email address. He did not check the URL. He did not check for the padlock. He acted out of fear â€" the email said his account was restricted, and he panicked. He gave his personal information to a scammer.

Why It Matters: Okonkwo lost â‚¦150,000. That is a huge amount of money. It could take him months to recover from this loss. This is not a hypothetical story â€" it happens to thousands of Nigerians every year. The scammers are getting better. Their emails and websites look more realistic. But the warning signs are still there. You just need to know what to look for.

Relevant Concept: Phishing and safe browsing. If Okonkwo had taken this course, he would have known:

1. Banks never ask for your password by email.
2. Always check the sender's email address.
3. Always check the URL for misspellings.

4. Look for the padlock icon.
5. Stop and think before clicking a link.

Worked Solution: If Okonkwo had taken this course, here is what he would have done:

1. He would have looked at the sender's email address. It would not be from First Bank.
2. He would have checked the URL. It would not be firstbanknigeria.com.
3. He would have seen there was no padlock.
4. He would have realised it was a phishing attempt and deleted the email.
5. He would have contacted his bank directly (by phone or in person) to verify the email.
6. He would have kept his â‚¦150,000.

Reasoning: Scammers rely on emotion â€” fear, excitement, urgency. They want you to act without thinking. The antidote is to stop and think. Check the facts. Verify the source. If in doubt, do not click.

Possible Mistake: Okonkwo might have realised it was a scam but done nothing. He might have thought, "I will just delete the email and forget about it." But scammers count on people doing nothing. If you receive a phishing email, report it to your bank. Warn your friends and family. Do not just delete it and move on.

Correction: Report phishing emails to your bank and to the relevant authorities. Warn others. The more people know about these scams, the fewer people will fall for them.

Transfer Exercise: "Your friend Adaeze receives an email that says she has won a free iPhone. All she needs to do is click a link and enter her phone number and address. Should she do it? Why or why not?"

Professional Connection: Every professional who uses email is a target for phishing. Office workers, business owners, government employees â€” everyone. Knowing how to identify a phishing email is not just a personal safety skill â€” it is a professional safety skill.

K. COMMON MISTAKES AND TROUBLESHOOTING (5 minutes)

Mistake 1: Typing URLs into the Search Box

Symptoms: The learner types a URL (e.g., `google.com`) into the Google search box instead of the address bar. **Likely Cause:** The learner does not understand the difference between the address bar and the search box. **How to Investigate:** Ask the learner, "Where did you type the URL?" If they point to the search box, they are confused. **Safe Corrective Steps:** Show the learner the address bar (at the very top of the browser) and the search box (in the middle of the Google homepage). Explain that the address bar is for URLs and the search box is for keywords. **How to Confirm the Problem Is Resolved:** The learner types URLs into the address bar. **How to Prevent Recurrence:** At the start of every browsing exercise, remind the learner: "Address bar for URLs. Search box for keywords."

Mistake 2: Clicking Pop-Up Ads

Symptoms: The learner clicks on pop-up windows that say "You have won a prize!" or "Your computer is infected!" **Likely Cause:** The learner does not know that pop-ups are often scams. **How to Investigate:** Ask the learner, "What did you click?" If they say "a pop-up," they need to learn about pop-up safety. **Safe Corrective Steps:** Teach the learner to close pop-ups by clicking the X in the top-right corner of the pop-up. Never click "OK," "Download," or "Claim Now" on a pop-up. **How to Confirm the Problem Is Resolved:** The learner closes pop-ups without clicking on them. **How to Prevent Recurrence:** Remind the learner at the start of every browsing exercise: "Never click on pop-ups. Close them immediately."

Mistake 3: Downloading Files from Untrusted Sources

Symptoms: The learner downloads a file from a pop-up or an untrusted website. **Likely Cause:** The learner does not understand the risks of downloading files. **How to Investigate:** Check the learner's Downloads folder. Are there files from untrusted sources? **Safe Corrective Steps:** Teach the learner to only download files from official, trusted websites. Show them how to check the file type before opening it. **How to Confirm the Problem Is Resolved:** The learner only downloads files from trusted sources. **How to Prevent Recurrence:** Remind the learner at the start of every session: "If you did not go looking for a file, do not download it."

Mistake 4: Sharing Personal Information Online

Symptoms: The learner shares their password, PIN, address or phone number on a website or in an email. **Likely Cause:** The learner does not understand what information is safe and unsafe to share. **How to Investigate:** Ask the learner, "What information did you share?" If they shared a password or PIN, they need to learn about information safety. **Safe Corrective Steps:** Teach the learner the golden rule: never share your password or PIN with anyone, online or offline. Only share personal information on secure, trusted websites. **How to Confirm the Problem Is Resolved:** The learner protects their personal information. **How to Prevent Recurrence:** Remind the learner at the start of every session: "Your password is your secret. Never share it with anyone."

Mistake 5: Ignoring Browser Security Warnings

Symptoms: The learner clicks "Continue" or "Proceed" when the browser shows a security warning. **Likely Cause:** The learner does not understand what browser security warnings mean. **How to Investigate:** Ask the learner, "Did you see a warning? What did it say?" **Safe Corrective Steps:** Teach the learner that browser security warnings are there to protect them. If the browser says "This site is not secure," do not proceed. Close the tab. **How to Confirm the Problem Is Resolved:** The learner heeds browser security warnings. **How to Prevent Recurrence:** Remind the learner: "If your browser shows a security warning, stop. Do not proceed."

L. SESSION ASSIGNMENT (5 minutes)

Assignment Title: "My Internet Safety Guide"

Purpose: To reinforce internet safety knowledge by having the learner create a simple guide that they can share with family and friends.

Realistic Scenario: "Your younger sister is about to start using the internet. She is excited but nervous. She asks you, 'How do I stay safe online?' You decide to write her a simple guide that explains the most important safety rules."

Detailed Instructions:

1. Open Microsoft Word or Notepad.
2. Write a guide titled "My Internet Safety Guide."
3. The guide should include:
    - A short introduction (2â€“3 sentences) explaining why internet safety matters
    - Five safety rules, each explained in 2â€“3 sentences
    - A closing sentence encouraging your sister to always stop and think before clicking
4. Save the file on the Desktop with the name "My Internet Safety Guide."
5. Show the saved file to the instructor before leaving.

Required Deliverables:

- A document named "My Internet Safety Guide" saved on the Desktop
- The document contains: an introduction, five safety rules, and a closing sentence

Submission Format:

- The file must be saved on the Desktop of the academy machine
- The learner must show the instructor the saved file before leaving

Deadline Recommendation:

- Before leaving the session (in-class assignment)

Marking Rubric:

Criterion	Excellent (5)	Good (3)	Needs Improvement (1)
Introduction	Clear, engaging, explains why safety matters	Present but vague	Missing or unclear
Five safety rules	All five rules accurate and well-explained	Four rules accurate	Three or fewer accurate

Criterion	Excellent (5)	Good (3)	Needs Improvement (1)
Explanation quality	Each rule explained in 2â€“3 clear sentences	Some rules lack explanation	Rules listed without explanation
Closing sentence	Encouraging and memorable	Present but generic	Missing
File saved correctly	Saved on Desktop with correct name	Saved but wrong location or name	Not saved

Total: 25 marks

Common Mistakes to Avoid:

- Listing rules without explaining them
- Writing rules that are too vague (e.g., "Be careful" instead of "Never share your password with anyone")
- Copying rules from the board instead of writing in their own words
- Not saving the file

Instructor Reference Solution:

Introduction: The internet is a powerful tool, but it can also be dangerous. Scammers, hackers and fake websites are everywhere. This guide will teach you five important rules to stay safe online.

Five Safety Rules:

1. **Never share your password.** Your password is your secret. No one â€” not your bank, not your school, not your friends â€” should ever ask for it. If someone asks for your password, it is a scam.
2. **Stop and think before clicking.** Scammers create fake emails and websites to trick you. Before you click a link, check the sender's email address and the URL. If something feels wrong, it probably is.
3. **Only download files from trusted sources.** If a pop-up says "Download this free program!" do not click it. Only download files from official websites you know and trust.
4. **Look for the padlock.** Before entering personal information on a website, check for the padlock icon in the address bar. If there is no padlock, the site is not secure.
5. **Use strong passwords.** A strong password is long and uses a mix of letters, numbers and symbols. Do not use your name, your birthday or "password123."

Closing Sentence: Remember: the most important safety tool is your brain. Stop, think and verify before you click, download or share. Stay safe online.

M. KNOWLEDGE CHECK (5 minutes)

Questions

1. Multiple Choice: What is the difference between the internet and the World Wide Web? a) The internet is the network, and the web is the collection of websites b) The internet and the web are the same thing c) The web is the network, and the internet is the collection of websites d) The internet is a type of browser

Answer: a) The internet is the network, and the web is the collection of websites

2. Short Answer: What are three things you should check before entering your password on a website?

Answer: (1) The URL â€” does it match the real website? (2) The padlock icon â€” is there a padlock in the address bar? (3) The design â€” does the website look professional?

3. Multiple Choice: What should you do if you receive an email that says "Your computer is infected! Click here to download a virus scanner"? a) Click the link immediately b) Download the virus scanner c) Delete the email and do not click the link d) Forward the email to your friends

Answer: c) Delete the email and do not click the link

4. Explain in Your Own Words: What is phishing, and how can you protect yourself from it?

Answer: Phishing is when a scammer pretends to be a trusted organisation and tricks you into giving them your password or personal information. You can protect yourself by checking the sender's email address, checking the URL, looking for the padlock, and never sharing your password by email.

5. Practical Identification: Open your browser. Navigate to `google.com`. Search for "Cyber Elias Academy." Bookmark the CEA website.

Answer: The learner successfully navigates to Google, searches, and bookmarks the CEA website.

6. Scenario-Based: Your friend says, "I got an email from my bank asking me to click a link and enter my password. Should I do it?" What advice would you give?

Answer: No. Banks never ask for your password by email. This is a phishing attempt. Delete the email and contact your bank directly to verify.

7. Error-Detecting: A learner writes in their assignment: "A safe website is one that has lots of colours and animations." What is wrong with this, and what should they write instead?

Answer: Lots of colours and animations do not make a website safe. A safe website has the correct URL, a padlock icon in the address bar, and a professional design.

N. REFLECTION AND RECAP (5 minutes)

Plain-English Summary

Today you learned how to use the internet safely. You learned what the internet is, how to open a browser, and how to navigate to websites by typing URLs. You learned how to use a search engine effectively. You learned how to tell the difference between safe and unsafe downloads. You learned how to recognise common online scams, including phishing. You learned how to identify a secure website by looking for the padlock icon. And you learned the most important rule of all: stop and think before you click, download or share.

Five Important Takeaways

1. The internet is the network. The web is the collection of websites you access through the internet.
2. Use the address bar for URLs and the search box for keywords.
3. Only download files from trusted sources. Never click on pop-ups.
4. Check the URL, the padlock and the design before entering personal information.
5. If it sounds too good to be true, it probably is. Stop and think before you act.

Questions That Help You Recognise What You Can Now Do

- Can you explain the difference between the internet and the web?
- Can you navigate to a website by typing a URL?
- Can you use a search engine to find specific information?
- Can you identify a safe and unsafe website?
- Can you recognise a phishing email?

Connection to the Next Session

In the next session, you will learn how to create and use an email account. You will learn how to send and receive emails, attach files, and communicate professionally online. This is the skill that will make you truly digitally independent. You now know how to browse the internet safely. Next, you will learn how to communicate through it.

O. INSTRUCTOR EVALUATION NOTES

Observable Signs of Competence

- The learner can navigate to a website by typing a URL.

- The learner can use a search engine effectively.
- The learner can identify safe and unsafe websites.
- The learner can recognise a phishing email.
- The learner creates and uses bookmarks.
- The learner demonstrates the "stop and think" rule before clicking links.

Common Misconceptions

- **"The internet and the web are the same thing."** Many learners confuse the internet and the web. Correct this by explaining that the internet is the network and the web is the collection of websites.
- **"If a website looks professional, it is safe."** Some learners think that a professional-looking website is always safe. Correct this by showing them that scammers can create professional-looking fake websites.
- **"Pop-ups are just annoying, not dangerous."** Some learners think pop-ups are harmless. Correct this by explaining that pop-ups can contain malware and scams.

Suggested Remedial Exercises

- For learners who cannot remember the difference between the address bar and the search box: Print a diagram of a browser with the address bar and search box labelled. Have the learner label it.
- For learners who keep clicking pop-ups: Install a pop-up blocker on their browser. Explain that pop-ups are dangerous and should always be closed.
- For learners who cannot identify phishing emails: Show them real examples of phishing emails and legitimate emails. Have them compare the two.

Differentiation Guidance

Level 1 â€” Supported (for learners who struggle):

- Provide a printed browser diagram with key parts labelled.
- Pair with a more confident learner for browsing exercises.
- Allow extra time for the independent exercise.
- Focus on safe browsing before search engine use.

Level 2 â€” Independent (standard):

- Complete all exercises as written.
- Answer all knowledge check questions.
- Complete the assignment to the standard shown in the rubric.

Level 3 â€” Challenge (for learners who finish early):

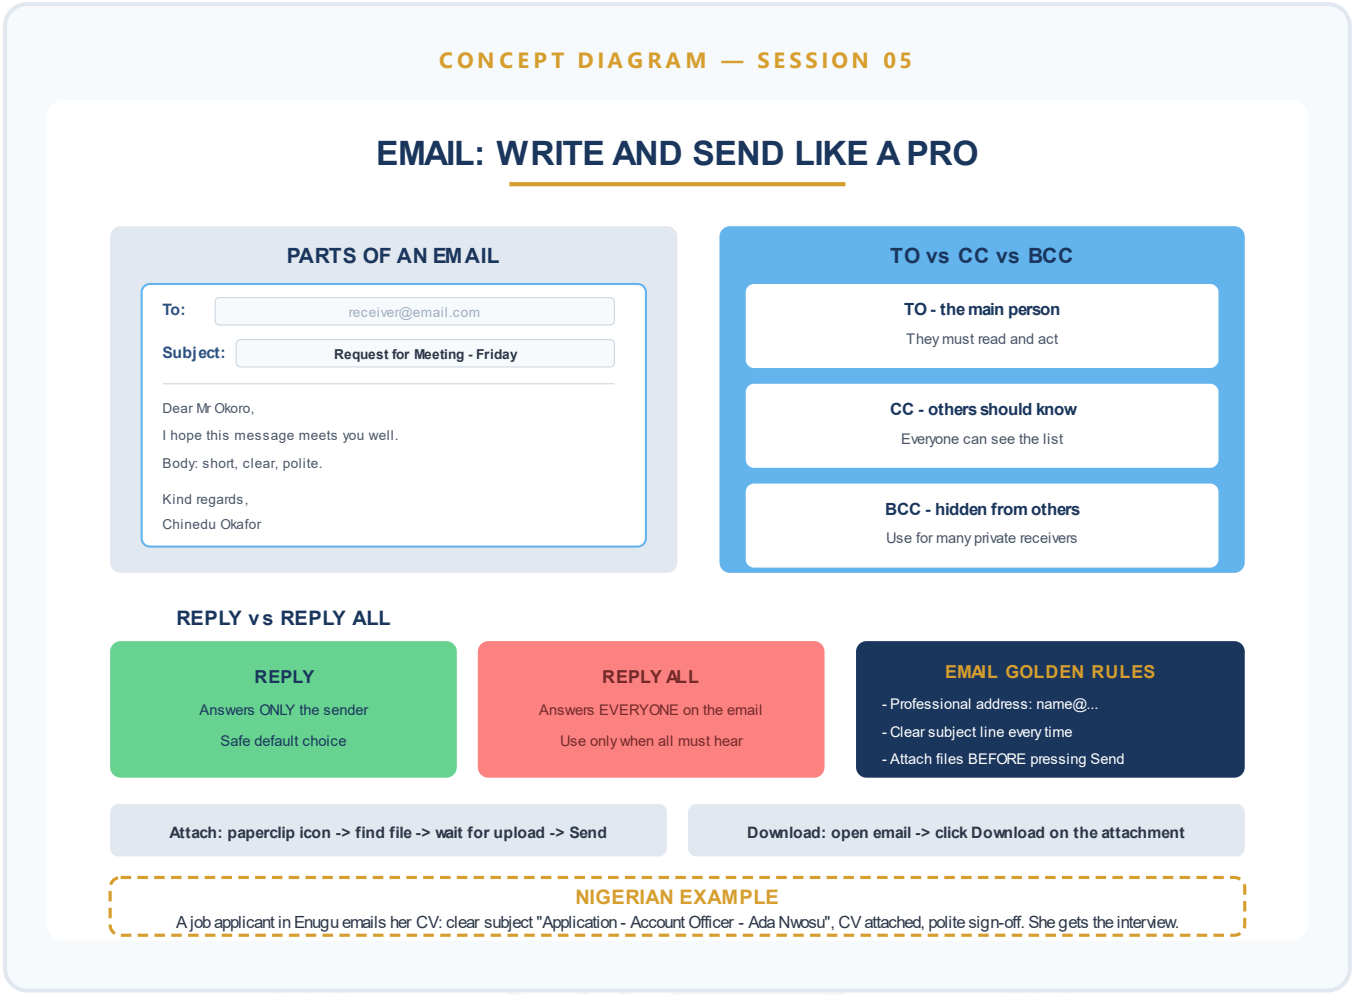

- Ask the learner to research and write down three more types of online scams.
- Ask the learner to create a bookmark folder called "CEA Resources" and save five useful websites.
- Ask the learner to explain the difference between HTTP and HTTPS.

End of Session 4

Next Session: Session 5 â€" Email & Online Communication **What to Bring:** A mobile phone number (for Gmail account creation), a willingness to communicate **Preparation:** Prepare Gmail account creation guides, create instructor email address for learners to send to, prepare sample attachments

SESSION 05 OF 6

Email Online Communication

SESSION 5: EMAIL & ONLINE COMMUNICATION

Week: 2 **Module:** Digital Independence **Duration:** 105 minutes **Difficulty:** Beginner **Prerequisite Knowledge:** Sessions 1â€“4 â€” full computer operation, internet, safe browsing **Connection to Previous Session:** Learners can now browse the internet safely; this session teaches them to communicate professionally through email **Preparation Required Before Class:**

- Prepare printed Gmail account creation guides (one per learner)
- Create a dedicated instructor email address for learners to send emails to (e.g., cea.assessment@gmail.com)
- Prepare sample attachments (a .txt file and an image) to send to learners
- Ensure all machines have a working browser and internet connection
- Prepare "Email Etiquette" handout (one per learner)

A. SESSION IDENTIFICATION

Field	Detail
Session Number	5
Title	Email & Online Communication

Field	Detail
Week	2
Module	Digital Independence
Duration	105 minutes
Difficulty	Beginner
Prerequisite Knowledge	Sessions 1â€"4 â€" full computer operation, internet, safe browsing
Connection to Previous Session	Builds on Sessions 1â€"4 by teaching the learner to communicate professionally through email
Preparation	Gmail creation guides, instructor email address, sample attachments, handouts

B. LEARNING OUTCOMES

By the end of this session, the learner will be able to:

1. **Explain what email is** and how it works in simple terms.
2. **Create a Gmail account** with a professional email address.
3. **Compose a professional email** with a clear subject line, proper greeting, well-structured body, and professional sign-off.
4. **Send and receive emails** confidently.
5. **Attach files to an email** and download attachments received by email.
6. **Distinguish between To, CC, and BCC** and explain when to use each.
7. **Use Reply vs Reply All** appropriately.
8. **Complete a basic online form** (e.g., a practice registration form).
9. **Join a Google Meet online meeting** using a meeting link.
10. **Demonstrate email etiquette and safety** including recognising suspicious emails.

C. REQUIRED MATERIALS

Hardware:

- One desktop computer per learner
- One keyboard per learner
- One mouse per learner
- One monitor per learner

Software:

- Windows 10 or Windows 11
- Google Chrome or Microsoft Edge web browser
- Gmail (accessed through the browser)

Accounts:

- Each learner will create a Gmail account (requires a mobile phone number for verification)
- Instructor email address: cea.assessment@gmail.com (for learners to send emails to)

Internet:

- Academy Wi-Fi (required for this session)

Printed Materials:

- Gmail account creation guide (one per learner)
- "Email Etiquette" handout (one per learner)

Sample Files (sent by instructor to learners):

- A .txt file named "Practice Document.txt" (a short text about CEA)
- An image file named "CEA Campus.jpg" (a photo of the academy)

Alternative for Learners Without a Phone Number: The instructor creates a shared practice Gmail account for learners who cannot create their own. Alternatively, learners can pair up and observe while their partner creates the account.

D. OPENING ACTIVITY (10 minutes)

The "Letter in the Post" Analogy

Instructor Setup: Bring a physical envelope with a letter inside. Place it on a table at the front of the room.

Instructor Script: "Good morning, everyone. Welcome to the second-to-last session. Today we are going to learn about email. But before we go online, I want you to look at this." (Hold up the envelope.) "This is an envelope. Inside is a letter. If I wanted to send this letter to my friend in Lagos, what would I do?" (Pause for answers.) "I would write the address on the envelope, put a stamp on it, and post it. How long would it take to reach Lagos?" (Pause.) "Three to five days, maybe more.

Now watch this." (Open your Gmail on the projector and send an email to yourself.) "I have just sent an email. It contains a message and a file. How long did it take?" (Pause.) "Five seconds. It is already in the inbox.

Email is the fastest way to send messages, documents, photographs and files anywhere in the world. It is used by billions of people every day. In this session, you will create your first email account, send your first email, and learn how to communicate professionally. This is the skill that will make you truly digitally independent. Let us begin."

Expected Learner Response: Excitement about creating their first email account. Some nervousness about getting it "right."

E. PREREQUISITE REVIEW (5 minutes)

Instructor Script: "Before we start, let us remember what we learned last time. Quick review."

Review Questions and Expected Answers:

1. "What is the internet?"
    - A giant network of connected computers.
2. "What is the difference between a URL and a search?"
    - A URL is a specific website address typed into the address bar. A search is when you type keywords into a search engine.
3. "How do you know if a website is safe?"
    - Check the URL, look for the padlock icon, and check if the design looks professional.
4. "What is phishing?"
    - When a scammer pretends to be a trusted organisation and tricks you into giving them your password or personal information.
5. "What is the most important rule of internet safety?"
    - Stop and think before you click, download or share.

How to Address Common Gaps:

- If a learner cannot remember the padlock rule, remind them: "The padlock means the website is secure."
- If a learner forgot what phishing is, remind them: "Phishing is a fake email or website that tries to steal your information."

F. FULL LECTURE NOTES (35 minutes)

Topic 1: What Is Email? (5 minutes)

Instructor Script: "Email stands for 'electronic mail.' It is a way to send messages, documents and files to anyone in the world who has an email address. It is the most common form of professional communication in the world.

How Does Email Work? When you send an email, it travels through the internet to the recipient's email server. The server stores the email until the recipient logs in and checks their inbox. This happens in seconds.

An email address has two parts:

- The **username** (before the @ symbol) â€" this is your unique name
- The **domain** (after the @ symbol) â€" this is the email provider

For example: `john.doe@gmail.com`

- Username: `john.doe`
- Domain: `gmail.com` (Google's email service)

Why Email Matters: Email is used for everything â€" job applications, business communication, school assignments, online banking, government services. Almost every online service requires an email address. If you do not have an email address, you are locked out of a huge part of the digital world.

Email Providers: The most popular email providers are:

- **Gmail** (Google) â€" free, reliable, and the most widely used
- **Outlook** (Microsoft) â€" also free, popular in corporate environments
- **Yahoo Mail** â€" older but still used by many people

We will use Gmail in this course because it is free, easy to use and works well on both computers and phones."

Topic 2: Creating a Gmail Account (10 minutes)

Instructor Script: "Now let us create a Gmail account. This is your first professional email address. Follow along on your own machines."

Step-by-Step Instructions:

1. "Open your browser. Go to `gmail.com`."
2. "Click 'Create account' (usually in the top-right corner or centre of the page)."
3. "Choose 'For my personal use' (or 'For myself')."
4. "Enter your first name and last name."
5. "Choose your username. This will be your email address. For example, if your name is Adaeze Okafor, your username could be `adaeze.okafor` or `adaezeokafor2026`. If the username is taken, Gmail will suggest alternatives. Choose one that is professional."
6. "Create a strong password. Use a mix of letters, numbers and symbols. Do not use your name, your birthday or 'password123.' Write the password down on a piece of paper and keep it safe."
7. "Click 'Next.'"
8. "Enter your phone number. Google will send a verification code to your phone. This is to prove you are a real person. Enter the code when you receive it."
9. "Enter your recovery email address (optional but recommended). This is a backup email where Google can send a reset link if you forget your password."
10. "Enter your birthday and gender."
11. "Click 'Next.'"
12. "Read the Privacy and Terms. Scroll to the bottom and click 'I agree.'"
13. "Congratulations! Your Gmail account is created. You will see your inbox."

Important Notes:

- Your email address should be professional. Avoid numbers that look random (e.g., `adaeze12345@gmail.com`). Use your real name if possible.
- Your password should be strong and unique. Do not use the same password for every account.
- Write down your email address and password on a piece of paper and keep it safe.

Topic 3: The Gmail Interface (5 minutes)

Instructor Script: "Now that you have a Gmail account, let me show you the main parts of the interface."

Key Parts of Gmail:

- **Inbox:** This is where you receive new emails. Unread emails are bold.
- **Sent:** This is where you see emails you have sent.
- **Drafts:** This is where emails you are writing but have not sent yet are saved.
- **Spam:** This is where Gmail puts suspicious emails. Check it occasionally in case a legitimate email ends up there.
- **Compose button:** This is the button you click to write a new email. It is usually in the top-left corner and says "Compose" with a plus icon.
- **Search bar:** This is at the top of the page. You can search for emails by sender, subject or keyword.
- **Profile icon:** This is in the top-right corner. Click it to manage your Google account or sign out.

Inbox Layout: Each email in your inbox shows:

- The sender's name (on the left)
- The subject line (in the middle)
- The date or time received (on the right)
- A preview of the email content (below the subject)

Unread emails are bold. Read emails are in normal text. You can click on any email to open it.

Topic 4: Composing a Professional Email (10 minutes)

Instructor Script: "Now let us learn how to write a professional email. An email has five parts:

1. Subject Line The subject line tells the recipient what the email is about. It should be clear and specific. A good subject line: "Meeting Rescheduled to Friday 10am." A bad subject line: "Hello" or "Important" or no subject at all.

2. Greeting The greeting is how you address the recipient. Common greetings:

- "Dear Mr. Okafor," (formal, for someone you do not know well)
- "Dear Adaeze," (semi-formal, for someone you know)
- "Hello John," (casual, for colleagues)
- "Good morning," (time-appropriate)

Do not use informal greetings like "Hey" or "What's up?" in professional emails.

3. Body The body is the main message. It should be:

- **Clear:** Say what you mean. Do not use vague language.
- **Concise:** Keep it short. Get to the point.
- **Structured:** Use paragraphs. One idea per paragraph.
- **Polite:** Use "please" and "thank you."

4. Sign-off The sign-off is how you end the email. Common sign-offs:

- "Best regards," (formal)
- "Sincerely," (formal)
- "Kind regards," (semi-formal)
- "Thanks," (casual)

5. Name Your name goes below the sign-off. You can also include your title, organisation and contact information.

Example of a Professional Email:

Subject: Application for Administrative Assistant Position

Dear Mr. Okafor,

I am writing to apply for the Administrative Assistant position at your company, as advertised on your website. I have attached my CV and a cover letter for your consideration.

I have two years of administrative experience and I am proficient in Microsoft Word, Excel and PowerPoint. I am organised, detail-oriented and comfortable working in a fast-paced office environment.

I would welcome the opportunity to discuss my application in an interview. I am available at your convenience.

Thank you for your time and consideration.

Best regards, Adaeze Okafor Phone: 0801 234 5678 Email: adaeze.okafor@gmail.com"

Topic 5: To, CC, and BCC (5 minutes)

Instructor Script: "When you compose an email, you will see three fields for recipients: To, CC, and BCC. Let me explain each one.

To: This is the primary recipient â€" the person you are directly addressing. Put their email address in the To field.

CC (Carbon Copy): CC means "carbon copy." This is for people who need to see the email but are not the primary recipient. For example, if you are sending an email to a client but want your manager to see it, you would put your manager's email in CC.

BCC (Blind Carbon Copy): BCC means "blind carbon copy." This is for people who need to see the email but should not be visible to other recipients. For example, if you are sending an email to 50 clients and you do not want them to see each other's email addresses, you would put all their email addresses in BCC.

When to Use Each:

- **To:** The person you are directly addressing.
- **CC:** People who need to be informed but do not need to act.
- **BCC:** People who need to see the email but should not be visible to others. Also used for mass emails to protect privacy.

Common Mistake â€" Reply All: When you receive an email that was sent to multiple people, you can choose to Reply (respond only to the sender) or Reply All (respond to everyone). Use Reply All only when your response is relevant to everyone. If your response is only for the sender, use Reply. Reply All is one of the most misused features in email. It can cause embarrassment and wasted time."

G. INSTRUCTOR DEMONSTRATION (15 minutes)

Demonstration 1: Composing and Sending an Email (5 minutes)

What the Instructor Prepares:

- Gmail open on the projector
- A professional email address to send to (e.g., cea.assessment@gmail.com)

What the Instructor Says and Does: "I am going to compose and send a professional email. Watch carefully."

1. "I click the 'Compose' button in the top-left corner. A new window opens."
2. "In the 'To' field, I type the recipient's email address: `cea.assessment@gmail.com`."
3. "In the 'Subject' field, I type: 'Introduction from [Instructor Name] â€" CEA Learner.'"
4. "In the body, I write: 'Dear CEA Team, My name is [Instructor Name]. I am a learner at Cyber Elias Academy. I am writing to introduce myself and to confirm that I have successfully created my Gmail account. I look forward to completing the Typing & Computer Basics course. Best regards, [Instructor Name]'"
5. "I click the 'Send' button at the bottom of the window. The email is sent."

What Learners Should Observe: The instructor composing a professional email with a clear subject line, greeting, body, and sign-off.

Expected Result: Learners can describe the five parts of a professional email.

Questions the Instructor Can Ask:

- "What are the five parts of a professional email?" (Answer: Subject line, greeting, body, sign-off, name.)
- "What is the difference between To and CC?" (Answer: To is for the primary recipient. CC is for people who need to see the email but are not the primary recipient.)

Demonstration 2: Attaching a File to an Email (5 minutes)

What the Instructor Prepares:

- A sample file on the Desktop (e.g., a .txt file called "Practice Document.txt")
- Gmail open with a new compose window

What the Instructor Says and Does: "Now I am going to attach a file to an email. Watch carefully."

1. "I click 'Compose' to open a new email."
2. "I fill in the To, Subject and Body fields."
3. "I click the paperclip icon at the bottom of the compose window. This is the 'Attach files' button."
4. "A file picker opens. I navigate to the Desktop. I find the file 'Practice Document.txt.' I double-click it."
5. "The file is attached. I can see its name at the bottom of the compose window."
6. "I click 'Send.' The email with the attachment is sent."

What Learners Should Observe: The instructor clicking the paperclip icon, navigating to the file, and attaching it.

Expected Result: Learners can describe the steps to attach a file to an email.

Common Errors and Corrections:

- If the learner cannot find the paperclip icon: "It is at the bottom of the compose window. It looks like a paperclip."
- If the learner cannot find the file: "Click 'Browse' or navigate to the Desktop. The file should be there. If not, ask the instructor to provide it."

Demonstration 3: Downloading an Email Attachment (5 minutes)

What the Instructor Prepares:

- An email with an attachment already in the instructor's inbox
- A designated download location (e.g., the Desktop)

What the Instructor Says and Does: "Now I am going to show you how to download an attachment from an email you receive."

1. "I have received an email with an attachment. I can see the attachment icon (a paperclip) next to the sender's name in my inbox."
2. "I click on the email to open it."
3. "At the bottom of the email, I can see the attachment. It shows the file name and a 'Download' button."
4. "I click 'Download.' The file is saved to my Downloads folder."
5. "To find the file, I open File Explorer and navigate to 'Downloads.' The file is there."

What Learners Should Observe: The instructor clicking on the email, clicking the download button, and finding the file in the Downloads folder.

Expected Result: Learners can describe the steps to download an email attachment.

Safety Reminder: "Only download attachments from people you know and trust. If you receive an unexpected attachment from an unknown sender, do not download it. It could be a virus."

H. GUIDED PRACTICAL EXERCISE (20 minutes)

Exercise: "My First Professional Email"

Practical Objective: The learner will create a Gmail account, compose a professional email, attach a file, send it to the instructor, and download an attachment sent by the instructor.

Starting Materials:

- A browser open on each machine
- A mobile phone (for Gmail account verification)
- A sample file on the Desktop to attach (provided by instructor)

Instructions:

Part 1: Create a Gmail Account (10 minutes)

1. "Open your browser. Go to `gmail.com`."
2. "Follow the printed guide to create your account. Use your real name for the username. Create a strong password. Write it down on a piece of paper."
3. "Verify your account with your phone number."
4. "When your account is created, you will see your inbox. Raise your hand."

Instructor Prompts:

- "What is your email address?" (Each learner states their email address.)
- "Is your password written down and kept safe?"

Part 2: Compose and Send an Email (5 minutes)

5. "Click 'Compose' to open a new email."
6. "In the 'To' field, type: `cea.assessment@gmail.com`"
7. "In the 'Subject' field, type: 'Introduction from [Your Name] â€" CEA Learner'"
8. "In the body, write a short professional email introducing yourself. Include:
    - Your name
    - That you are a learner at CEA
    - What you have learned so far in the course
    - A professional sign-off"
9. "Click 'Send.'"

Instructor Prompts:

- "What are the five parts of your email?" (Answer: Subject, greeting, body, sign-off, name.)
- "Did you use a professional greeting and sign-off?"

Part 3: Attach a File to an Email (3 minutes)

10. "Click 'Compose' again."
11. "In the 'To' field, type your own email address."
12. "In the 'Subject' field, type: 'Practice Attachment â€" [Your Name]'"
13. "In the body, write: 'Please find attached the practice document.'"
14. "Click the paperclip icon. Navigate to the Desktop. Find the file 'Practice Document.txt.' Double-click it to attach it."
15. "Click 'Send.'"

Instructor Prompts:

- "How do you know the file is attached?" (Answer: The file name appears at the bottom of the compose window.)

Part 4: Download an Attachment (2 minutes)

16. "Wait a moment. I will send you an email with an attachment. When you receive it, open it."
17. "Click the 'Download' button on the attachment."
18. "Open File Explorer. Navigate to 'Downloads.' Find the file. Open it to verify it downloaded correctly."

Instructor Prompts:

- "Where did the file go when you clicked Download?" (Answer: The Downloads folder.)
- "Can you open the file and see its contents?"

Expected Result: Every learner has created a Gmail account, sent a professional email to the instructor, attached a file to an email, and downloaded an attachment from an email.

Troubleshooting Guidance:

- If the learner cannot create a Gmail account: "Make sure you have a mobile phone for verification. If you do not have a phone, ask the instructor for a practice account."
- If the learner cannot send an email: "Check that you typed the email address correctly. Check that you clicked 'Send,' not 'Save draft.'"
- If the learner cannot attach a file: "Click the paperclip icon at the bottom of the compose window. Navigate to the Desktop. Double-click the file."

- If the learner cannot download an attachment: "Make sure you clicked 'Download,' not just the file name. Check your Downloads folder."

Completion Checklist:

- ☐ Created a Gmail account with a professional email address
- ☐ Composed and sent a professional email to the instructor
- ☐ Attached a file to an email and sent it
- ☐ Downloaded an attachment from an email received from the instructor

---

I. INDEPENDENT CLASS EXERCISE (10 minutes)

Exercise: "Email Etiquette Quiz"

Scenario: "You are working as an administrator at a company in Port Harcourt. Your boss asks you to review some emails that were sent by junior staff. She wants to know which emails are professional and which ones need improvement. Below are four email descriptions. For each one, decide if it is professional or needs improvement, and explain why."

Task: Read each email description and write down:

1. Is it professional or needs improvement?
2. Why?

Email Descriptions:

Email A: Subject: "Meeting" Body: "Hey, the meeting is tomorrow. Don't be late. â€" Tunde"

Email B: Subject: "Request for Leave" Body: "Dear Mr. Adeyemi, I would like to request leave from the 15th to the 20th of October for a family matter. I have attached the leave application form for your approval. Thank you for your understanding. Best regards, Funmi Adewale"

Email C: Subject: "URGENT!!!" Body: "SEND ME THE REPORT NOW!!!"

Email D: Subject: "Weekly Sales Report â€" Week 42" Body: "Dear Team, Please find attached the weekly sales report for Week 42. Total sales for the week were â,¦2,450,000, which is a 12% increase from last week. Let me know if you have any questions. Best regards, Chika Obi"

Requirements:

- Write in full sentences where possible
- You may discuss with a partner, but write your own answers

Time Allowance: 10 minutes

Success Criteria:

- All four emails correctly identified as professional or needing improvement
- At least three explanations that correctly identify the strengths or weaknesses

Hints Available If the Learner Gets Stuck:

- Hint 1: "Does the email have a clear subject line?"
- Hint 2: "Does the email use a professional greeting and sign-off?"
- Hint 3: "Is the tone polite and respectful?"

Complete Answer Key for the Instructor:

Email A: Needs Improvement

- The subject line is too vague. It should say what the meeting is about.
- The greeting is too informal ("Hey"). It should be "Dear [Name]" or "Hello [Name]."
- The body is too brief. It should include the date, time and location of the meeting.
- The sign-off is missing. It should end with the sender's name.

Email B: Professional

- The subject line is clear and specific.

- The greeting is professional ("Dear Mr. Adeyemi").
- The body is clear, polite and well-structured.
- The sign-off is professional ("Best regards") and includes the sender's name.

Email C: Needs Improvement

- The subject line uses all caps and multiple exclamation marks, which looks aggressive.
- The body is demanding and rude. It should be polite and specific.
- The greeting and sign-off are missing.
- The sender did not introduce themselves.

Email D: Professional

- The subject line is clear and includes specific details (Week 42).
- The body is well-structured and includes relevant data.
- The tone is polite and professional.
- The sign-off is professional and includes the sender's name.

J. REAL-WORLD CASE STUDY (5 minutes)

Case: "Adaeze's Job Application"

Situation: Adaeze has just finished her NYSC. She sees a job advert for an administrative assistant at a company in Port Harcourt. The advert says to send a CV and cover letter to `hr@companyname.com`. Adaeze has never sent a professional email before. She opens her Gmail and writes:

Subject: "Job" Body: "Here is my CV. â€" Adaeze"

She attaches her CV and sends it. Two weeks later, she receives a rejection email. The reason: her email was unprofessional.

The Problem: Adaeze's email was too informal and incomplete. She did not use a proper greeting, she did not introduce herself, she did not mention the position she was applying for, and she did not use a professional sign-off. The HR manager received hundreds of applications. Adaeze's email stood out â€" for the wrong reasons.

Why It Matters: In the professional world, your email is often the first impression you make. A well-written email shows that you are professional, detail-oriented and serious about the opportunity. A poorly written email suggests the opposite. Many qualified candidates lose job opportunities because of bad email skills.

Relevant Concept: Professional email writing. If Adaeze had taken this course, she would have known how to write a proper professional email.

Worked Solution: If Adaeze had taken this course, here is what she would have written:

Subject: Application for Administrative Assistant Position

Dear Hiring Manager,

I am writing to apply for the Administrative Assistant position at your company, as advertised on your website. I have attached my CV and cover letter for your consideration.

I recently completed my NYSC and I have one year of administrative experience from my placement year. I am proficient in Microsoft Word, Excel and PowerPoint, and I am comfortable managing schedules, organising documents and communicating with clients.

I would welcome the opportunity to discuss my application in an interview. I am available at your convenience.

Thank you for your time and consideration.

Best regards, Adaeze Okafor Phone: 0801 234 5678 Email: adaeze.okafor@gmail.com

Reasoning: This email is professional, clear and complete. It tells the recipient who she is, what she is applying for, why she is qualified, and how to contact her. It shows that she takes the opportunity seriously.

Possible Mistake: Adaeze might have written a perfect email but forgotten to attach her CV. This is a common mistake. Always check that your attachment is there before clicking Send.

Correction: Before sending an important email, re-read it. Check the spelling, check the attachment, and check the recipient's email address. A moment of care can save you from embarrassment.

Transfer Exercise: "You are applying for a church volunteer position. The pastor asks you to send an email introducing yourself. Write a professional email that you could actually send."

Professional Connection: Every job application, business proposal, school application and professional communication starts with email. Knowing how to write a professional email is one of the most important career skills you can have.

K. COMMON MISTAKES AND TROUBLESHOOTING (5 minutes)

Mistake 1: Using an Informal Email Address

Symptoms: The learner creates an email address like `sexyboy2000@gmail.com` or `cutegirl123@gmail.com`. **Likely Cause:** The learner does not understand that an email address is a professional identity. **How to Investigate:** Ask the learner, "What is your email address?" If it contains slang, numbers or informal words, it is unprofessional. **Safe Corrective Steps:** Explain that an email address is like a name tag. It should be professional and based on the learner's real name. Help the learner create a new, professional email address. **How to Confirm the Problem Is Resolved:** The learner's email address is professional and based on their real name. **How to Prevent Recurrence:** Before creating an email address, ask the learner, "Would you be comfortable giving this email address to a potential employer?" If the answer is no, help them choose a better one.

Mistake 2: Forgetting to Attach a File

Symptoms: The learner writes "Please find attached..." but does not attach the file. **Likely Cause:** The learner forgets to click the paperclip icon. **How to Investigate:** Ask the learner, "Did you attach the file?" Check the sent email. Is there an attachment? **Safe Corrective Steps:** Teach the learner to always check for the attachment before clicking Send. Show them how to look for the file name at the bottom of the compose window. **How to Confirm the Problem Is Resolved:** The learner checks for the attachment before sending. **How to Prevent Recurrence:** Make it a habit. Before every email, ask: "Did I attach the file?"

Mistake 3: Using Reply All When Reply Is Appropriate

Symptoms: The learner uses Reply All to respond to an email that was sent to many people, but their response is only relevant to the sender. **Likely Cause:** The learner does not understand the difference between Reply and Reply All. **How to Investigate:** Ask the learner, "Did everyone need to see your response?" **Safe Corrective Steps:** Explain the difference between Reply and Reply All. Teach the learner to use Reply unless everyone needs to see the response. **How to Confirm the Problem Is Resolved:** The learner uses Reply when appropriate and Reply All only when necessary. **How to Prevent Recurrence:** Remind the learner: "Reply All is for everyone. Reply is for the sender. Choose carefully."

Mistake 4: Writing in All Caps

Symptoms: The learner writes an email in ALL CAPITAL LETTERS. **Likely Cause:** The learner does not know that writing in all caps is considered shouting. **How to Investigate:** Read the learner's email. Is it in all caps? **Safe Corrective Steps:** Explain that writing in all caps is like shouting. It is rude and unprofessional. Teach the learner to use normal capitalisation. **How to Confirm the Problem Is Resolved:** The learner writes in normal capitalisation. **How to Prevent Recurrence:** Remind the learner: "All caps is shouting. Use normal letters."

Mistake 5: Not Checking Spam Folder

Symptoms: The learner says, "I did not receive the email." But the email is in the Spam folder. **Likely Cause:** Gmail sometimes puts legitimate emails in Spam. **How to Investigate:** Ask the learner to check their Spam folder. **Safe Corrective Steps:** Teach the learner to check their Spam folder regularly. Show them how to mark an email as "Not spam" if it is legitimate. **How to Confirm the Problem Is Resolved:** The learner checks their Spam folder and finds the missing email. **How to Prevent Recurrence:** Remind the learner: "Check your Spam folder if you are expecting an email but do not see it."

L. SESSION ASSIGNMENT (5 minutes)

Assignment Title: "My Professional Email Setup"

Purpose: To reinforce email skills by having the learner create a professional email account and send a formal email with an attachment.

Realistic Scenario: "You have just been accepted for an internship at a company in Port Harcourt. The HR manager asks you to send a formal email introducing yourself and attaching a copy of your CV. You will do this using the Gmail account you created in today's session."

Detailed Instructions:

1. Open Gmail.
2. Compose a new email.
3. In the 'To' field, type: `cea.assessment@gmail.com`
4. In the 'Subject' field, type: 'Internship Introduction â€" [Your Name]'
5. In the body, write a professional email that includes:
    - A proper greeting (e.g., "Dear HR Manager,")
    - Your name and the position you are applying for
    - A brief summary of your skills and qualifications
    - A professional sign-off (e.g., "Best regards,")
    - Your full name, phone number and email address
6. Attach a file to the email. You can use the 'Practice Document.txt' file on the Desktop, or create your own short document in Notepad.
7. Send the email.
8. Open the sent email in your Sent folder to verify it was sent correctly.

Required Deliverables:

- A professional email sent to cea.assessment@gmail.com with an attachment
- The email must include: greeting, body, sign-off, name, phone number, email address

Submission Format:

- The email must be sent to the instructor's email address
- The learner must show the instructor the sent email in their Sent folder

Deadline Recommendation:

- Before leaving the session (in-class assignment)

Marking Rubric:

Criterion	Excellent (5)	Good (3)	Needs Improvement (1)
Subject line	Clear and specific	Present but vague	Missing or unclear
Greeting	Professional ("Dear...")	Semi-formal ("Hello...")	Informal ("Hey...") or missing
Body content	Clear, complete, well-structured	Mostly clear	Incomplete or unclear
Sign-off	Professional ("Best regards")	Semi-formal ("Thanks")	Informal or missing
Contact information	Includes name, phone, email	Includes name and one other	Missing
Attachment	File attached correctly	File attached but wrong file	No attachment
Email address in To field	Correct (cea.assessment@gmail.com)	Typed with minor errors	Incorrect or missing

Total: 35 marks

Common Mistakes to Avoid:

- Forgetting to attach the file
- Using an informal greeting or sign-off

- Writing the body in all caps
- Not including contact information
- Typing the wrong email address in the To field

Instructor Reference Solution:

Subject: Internship Introduction â€" Adaeze Okafor

Dear HR Manager,

My name is Adaeze Okafor. I am writing to introduce myself and to express my interest in the internship position at your company.

I recently completed the Typing & Computer Basics course at Cyber Elias Academy, where I learned how to use a computer confidently, manage files, browse the internet safely and communicate professionally through email. I am proficient in Microsoft Word, Excel and PowerPoint, and I type at 25 words per minute.

I am eager to contribute to your team and to develop my skills further. I have attached my CV for your review.

Thank you for your time and consideration.

Best regards, Adaeze Okafor Phone: 0801 234 5678 Email: adaeze.okafor@gmail.com

---

M. KNOWLEDGE CHECK (5 minutes)

Questions

1. Multiple Choice: What are the five parts of a professional email? a) Subject, greeting, body, sign-off, name b) To, CC, BCC, attachment, send c) Username, domain, password, inbox, sent d) Browser, URL, search, download, bookmark

Answer: a) Subject, greeting, body, sign-off, name

2. Short Answer: What is the difference between To, CC, and BCC?

Answer: To is for the primary recipient. CC is for people who need to see the email but are not the primary recipient. BCC is for people who need to see the email but should not be visible to other recipients.

3. Multiple Choice: What should you do if you receive an email from an unknown sender with an attachment? a) Download the attachment immediately b) Open the attachment to see what it is c) Do not download the attachment â€" it could be a virus d) Forward the attachment to your friends

Answer: c) Do not download the attachment â€" it could be a virus

4. Explain in Your Own Words: Why is it important to use a professional email address?

Answer: A professional email address is based on your real name and does not contain slang, numbers or informal words. It shows that you are serious and professional. An unprofessional email address can cost you job opportunities and make a bad first impression.

5. Practical Identification: Open Gmail. Compose a new email. Identify the To field, the Subject field, the Compose button, and the Attach button (paperclip icon).

Answer: The learner correctly identifies all four elements.

6. Scenario-Based: Your friend says, "I sent an email but the recipient says they did not get it. What happened?" What are two things you would tell your friend to check?

Answer: (1) Check the Sent folder to verify the email was sent. (2) Check if the recipient's email address was typed correctly. (3) Check if the email ended up in the recipient's Spam folder.

7. Error-Detecting: A learner writes in their assignment: "I used Reply All to respond to an email from my boss." When is this appropriate, and when is it not?

Answer: Reply All is appropriate when everyone who received the original email needs to see the response. It is not appropriate when the response is only for the sender. In most cases, Reply is the better choice.

N. REFLECTION AND RECAP (5 minutes)

Plain-English Summary

Today you learned how to create and use a Gmail account. You learned how to compose a professional email with a clear subject line, proper greeting, well-structured body, and professional sign-off. You learned how to send and receive emails, attach files, and download attachments. You learned the difference between To, CC, and BCC, and when to use Reply vs Reply All. You also learned email etiquette and safety. This is the skill that connects you to the professional world.

Five Important Takeaways

1. Email stands for electronic mail. It is the most common form of professional communication.
2. A professional email has five parts: subject line, greeting, body, sign-off, and name.
3. Use To for the primary recipient, CC for people who need to see the email, and BCC for privacy.
4. Only download attachments from people you know and trust.
5. Always check for the attachment before clicking Send.

Questions That Help You Recognise What You Can Now Do

- Can you create a Gmail account?
- Can you compose and send a professional email?
- Can you attach a file to an email?
- Can you download an attachment from an email?
- Can you explain the difference between To, CC, and BCC?

Connection to the Next Session

This is the second-to-last session. You now have all the skills you need: computer operation, file management, internet browsing, safe searching, and email. In the next session â€" the final session â€" you will demonstrate all of these skills in an unaided practical assessment. You will create a folder, save a document, download a file from the internet, attach it to an email, and send it â€" all without help. This is your moment to show what you have learned. You are ready.

O. INSTRUCTOR EVALUATION NOTES

Observable Signs of Competence

- The learner creates a Gmail account with a professional email address.
- The learner composes and sends a professional email.
- The learner attaches a file to an email and downloads an attachment.
- The learner uses To, CC, and BCC appropriately.
- The learner uses Reply vs Reply All correctly.
- The learner demonstrates email etiquette and safety.

Common Misconceptions

- **"An email address is just an email address."** Some learners think any email address is fine. Correct this by explaining that an email address is a professional identity.
- **"Reply All is the same as Reply."** Some learners use Reply All for everything. Correct this by explaining the difference and the problems Reply All can cause.
- **"If an email is in my Spam folder, it is spam."** Some learners think Spam is always spam. Correct this by explaining that legitimate emails sometimes end up in Spam.

Suggested Remedial Exercises

- For learners who cannot create a Gmail account: Pair them with a learner who has already created an account. Let them observe the process.

- For learners who cannot attach a file: Walk them through the process step by step. Let them practise attaching and sending files multiple times.
- For learners who use Reply All too often: Give them scenarios and ask them to choose between Reply and Reply All. Discuss the answers.

Differentiation Guidance

Level 1 â€" Supported (for learners who struggle):

- Provide a printed Gmail account creation guide with screenshots.
- Pair with a more confident learner for email exercises.
- Allow extra time for the independent exercise.
- Focus on composing and sending emails before attachments.

Level 2 â€" Independent (standard):

- Complete all exercises as written.
- Answer all knowledge check questions.
- Complete the assignment to the standard shown in the rubric.

Level 3 â€" Challenge (for learners who finish early):

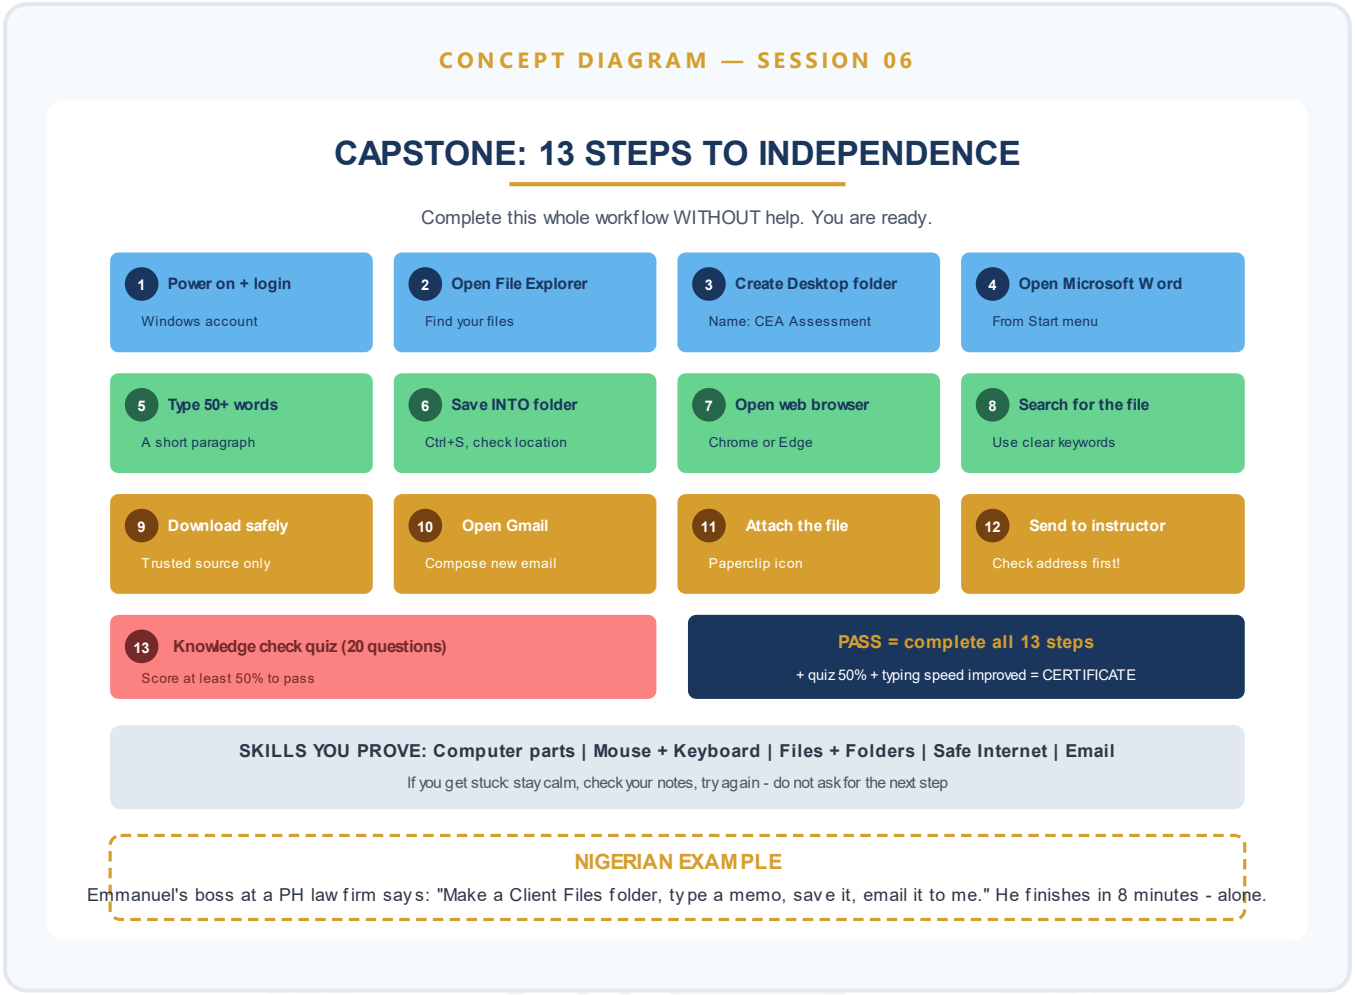

- Ask the learner to research and write down three more email etiquette rules.
- Ask the learner to create an email signature with their name, title and contact information.
- Ask the learner to explain the difference between a professional email and a text message.

End of Session 5

Next Session: Session 6 â€" Demonstrated Independence (Capstone) **What to Bring:** Confidence, all the skills you have learned **Preparation:** Print assessment checklists, prepare knowledge check quizzes, ensure all machines are functional

SESSION 06 OF 6

Demonstrated Independence Capstone

SESSION 6: DEMONSTRATED INDEPENDENCE (CAPSTONE)

Week: 2 **Module:** Digital Independence **Duration:** 105 minutes **Difficulty:** Beginner (but tests all accumulated skills) **Prerequisite Knowledge:** Sessions 1â€“5 â€” all prior knowledge **Connection to Previous Session:** This session integrates and tests everything taught in Sessions 1â€–5 **Preparation Required Before Class:**

- Print assessment checklists (one per learner)
- Print knowledge check quizzes (one per learner)
- Ensure all machines are functional
- Prepare certificate sign-off sheets
- Prepare a specific file for learners to download (e.g., a practice document hosted on a CEA-controlled page or a pre-staged download link)
- Ensure the instructor's email address is ready to receive capstone emails

A. SESSION IDENTIFICATION

Field	Detail
Session Number	6

Field	Detail
Title	Demonstrated Independence (Capstone)
Week	2
Module	Digital Independence
Duration	105 minutes
Difficulty	Beginner (tests all accumulated skills)
Prerequisite Knowledge	Sessions 1â€“5 â€” all prior knowledge
Connection to Previous Session	Integrates and tests everything taught in Sessions 1â€“5
Preparation	Assessment checklists, knowledge check quizzes, certificate sign-off sheets, functional machines

B. LEARNING OUTCOMES

By the end of this session, the learner will be able to:

1. **Power on a computer and log in** to a Windows account without assistance.
2. **Create a folder** on the Desktop with a specific name.
3. **Open Microsoft Word** and type a short paragraph (minimum 50 words).
4. **Save the document** inside the created folder.
5. **Open a web browser** and search for a specific file.
6. **Download the file** from a safe, trusted source.
7. **Open Gmail** and compose a new email.
8. **Attach the downloaded file** to the email.
9. **Send the email** to the instructor.
10. **Complete a knowledge check quiz** covering all sessions.
11. **Demonstrate improved typing speed** compared to their Session 2 baseline.
12. **Reflect on their learning** and identify areas for continued growth.

C. REQUIRED MATERIALS

Hardware:

- One desktop computer per learner
- One keyboard per learner
- One mouse per learner
- One monitor per learner

Software:

- Windows 10 or Windows 11
- Microsoft Word (pre-installed)
- Google Chrome or Microsoft Edge web browser
- Gmail (accessed through the browser)

Accounts:

- Each learner's Gmail account (created in Session 5)
- Instructor email address: cea.assessment@gmail.com

Internet:

- Academy Wi-Fi (required for this session)

Printed Materials:

- Assessment checklist (one per learner)
- Knowledge check quiz (one per learner)
- Certificate sign-off sheet (one per learner)

Assessment Files:

- A specific file for learners to download (e.g., "CEA Practice Document.pdf" hosted on a CEA-controlled page or a pre-staged download link)
- A typing speed test passage (same as Session 2 for comparison)

Alternative for Learners Without Internet: The instructor provides the file on a USB drive. The learner copies it from the USB drive instead of downloading it.

D. OPENING ACTIVITY (5 minutes)

"You Are Ready"

Instructor Script: "Good morning, everyone. This is it â€" the final session. Two weeks ago, many of you had never turned on a computer. Today, you are going to prove that you can use one independently.

I am not going to help you. I am not going to give you step-by-step instructions. I am going to give you a task, and you are going to complete it on your own. This is not a test of perfection. It is a test of independence. Can you sit down at a computer and get the job done without someone holding your hand?

If you have attended the previous five sessions and practised, you are ready. If you are nervous, that is normal. Take a deep breath. You know how to do this. Let us begin."

Expected Learner Response: A mix of excitement and nervousness. Some learners will be confident. Others will be anxious. The instructor's calm, encouraging tone sets the atmosphere.

E. PREREQUISITE REVIEW (5 minutes)

Instructor Script: "Before we start the assessment, let us do a quick review of everything you have learned. I will ask questions and you answer out loud."

Review Questions and Expected Answers:

1. "What are the five main parts of a computer?"
    - Monitor, keyboard, mouse, system unit (CPU), speakers.
2. "What are the five things you can do with a mouse?"
    - Left-click, right-click, double-click, drag-and-drop, scroll.
3. "Where do your fingers rest on the keyboard?"
    - On the home row: A S D F (left hand) and J K L ; (right hand).
4. "What does Ctrl+S do?"
    - It saves the current work.
5. "What is the difference between a file and a folder?"
    - A file is a single piece of information. A folder is a container for files.
6. "What is the internet?"
    - A giant network of connected computers.
7. "How do you know if a website is safe?"
    - Check the URL, look for the padlock icon, and check if the design looks professional.

8. "What are the five parts of a professional email?"
    - Subject line, greeting, body, sign-off, name.
9. "What is the most important rule of internet safety?"
    - Stop and think before you click, download or share.
10. "What is the correct way to shut down a computer?"
    - Click Start, click Power, click Shut down.

How to Address Common Gaps:

- If a learner cannot answer a question, do not embarrass them. Ask another learner to help. The goal is to activate prior knowledge, not to test.

F. FULL LECTURE NOTES (10 minutes)

The Capstone Assessment Explained

Instructor Script: "Here is what you are going to do today. I will give you the full task, and then you will complete it on your own. I will be watching, but I will not help unless you are truly stuck. If you get stuck, try to figure it out yourself first. Use the skills you have learned. Check your notes if you need to. But do not ask me to tell you what to do next.

The Task:

1. Turn on the computer and log in to the Windows account.
2. Open File Explorer.
3. Create a new folder on the Desktop named "CEA Assessment â€" [Your Name]."
4. Open Microsoft Word.
5. Type a short paragraph (minimum 50 words) introducing yourself and describing what you have learned in this course.
6. Save the document inside the folder you created in step 3.
7. Open a web browser.
8. Go to the website I will write on the board.
9. Download the file from that website.
10. Open Gmail.
11. Compose a new email to: cea.assessment@gmail.com
12. Attach the downloaded file to the email.
13. Send the email.

That is it. Thirteen steps. You have done every one of these steps before, in the previous five sessions. Now you are going to do them all together, without help.

After the practical assessment, you will take a short knowledge check quiz and do a typing speed test. Then we will review your portfolio and I will sign your certificate.

Any questions?"

Key Point: The capstone is not a trick. It is not designed to make you fail. It is designed to prove that you can do the things you have been taught. If you have been paying attention and practising, you will pass.

G. INSTRUCTOR DEMONSTRATION (0 minutes)

There is no instructor demonstration in this session.

The entire session is dedicated to the learner's unaided practical assessment. The instructor's role is to observe, record results, and provide encouragement â€" not to demonstrate.

What the Instructor Does Instead:

- Writes the download URL on the whiteboard

- Distributes the assessment checklists
- Observes each learner and records their progress on the checklist
- Provides verbal encouragement ("You are doing well," "Keep going," "You know this")
- Does NOT provide step-by-step guidance
- Intervenes only if a learner is truly stuck and cannot proceed after attempting to troubleshoot independently

---

H. GUIDED PRACTICAL EXERCISE (0 minutes)

There is no guided practical in this session.

The learner completes the entire workflow independently. This is the whole point of the capstone.

I. INDEPENDENT CLASS EXERCISE (50 minutes)

Exercise: "Demonstrated Independence"

Scenario: "You are a new employee at a small business in Port Harcourt. On your first day, your manager asks you to complete a set of computer tasks. You have never done these tasks before, but you have completed a computer course at Cyber Elias Academy. You sit down at the computer and begin."

Task: Complete the following 13 steps without assistance:

1. Turn on the computer and log in to the Windows account.
2. Open File Explorer.
3. Create a new folder on the Desktop named "CEA Assessment â€" [Your Name]."
4. Open Microsoft Word.
5. Type a short paragraph (minimum 50 words) introducing yourself and describing what you have learned in this course.
6. Save the document inside the folder you created in step 3.
7. Open a web browser.
8. Go to the website written on the whiteboard.
9. Download the file from that website.
10. Open Gmail.
11. Compose a new email to: cea.assessment@gmail.com
12. Attach the downloaded file to the email.
13. Send the email.

Requirements:

- Complete all 13 steps independently
- Do not ask the instructor for step-by-step guidance
- If you get stuck, try to troubleshoot on your own first
- Use your notes and the skills you have learned

Time Allowance: 50 minutes

Success Criteria:

- All 13 steps completed
- The folder is correctly named and contains the Word document
- The email is sent with the correct attachment
- The learner can explain what they did and why

Hints Available If the Learner Gets Stuck:

- The instructor may provide a single hint if a learner is truly stuck for more than 5 minutes. The hint should be a question, not an answer. For example: "What did we use to create a folder?" or "Where did we click to attach a file?"

- The instructor should NOT provide the full answer. The learner should figure it out themselves.

Complete Answer Key for the Instructor:

The instructor observes each learner and records their progress on the assessment checklist. The checklist is provided in Part 6 (Capstone Project Pack).

What the Instructor Should Look For:

- Did the learner complete all 13 steps?
- Did the learner use correct procedures (e.g., saving in the right folder, attaching the right file)?
- Did the learner demonstrate safe browsing habits?
- Did the learner type using correct finger placement?
- Did the learner troubleshoot any problems independently?
- Did the learner ask for help? If so, how many times?

Grading: The capstone is graded as Pass / Not Yet Competent.

- **Pass:** The learner completed all 13 steps independently (with no more than 2 hints from the instructor).
- **Not Yet Competent:** The learner could not complete all 13 steps, or required more than 2 hints. The learner is given the opportunity to practise and retake the assessment.

J. REAL-WORLD CASE STUDY (5 minutes)

Case: "Emmanuel's First Day"

Situation: Emmanuel completed the Typing & Computer Basics course at CEA. He passed the capstone assessment. Two weeks later, he starts a new job as an office assistant at a law firm in Port Harcourt. On his first day, his boss says: "Create a folder on your desktop called 'Client Files.' Type a short memo about yourself and save it in that folder. Then email it to me."

Emmanuel sits down at the computer. He takes a deep breath. He has done this before. He turns on the computer, logs in, creates the folder, opens Word, types the memo, saves it, opens his email, attaches the file, and sends it. Total time: 8 minutes.

His boss is impressed. "You are the fastest new starter we have had," she says.

The Problem: Emmanuel's colleague, Chinedu, also started on the same day. Chinedu did not take the CEA course. When his boss gives him the same task, he stares at the screen. He does not know how to create a folder. He does not know how to attach a file. He has to ask for help. His boss is not impressed.

Why It Matters: Emmanuel and Chinedu have the same job. But Emmanuel can work independently. Chinedu cannot. In a workplace, independence is valuable. Employers do not have time to hold your hand. They expect you to be able to sit down and get to work.

Relevant Concept: All the skills taught in Sessions 1â€“5. Emmanuel's success is the result of two weeks of focused, practical learning.

Worked Solution: Emmanuel succeeded because he had practised every step of the workflow multiple times. He had created folders, saved documents, downloaded files, and sent emails with attachments. By the time he did it in a real workplace, it was second nature.

Reasoning: The capstone assessment is not just a test. It is a rehearsal for real life. When you can complete the workflow independently in class, you can complete it independently in a workplace.

Possible Mistake: Emmanuel might have been nervous on his first day. Nervousness can make you forget things. But because he had practised so much, his hands remembered what to do even when his brain was stressed.

Correction: Practice until the skills become automatic. Do not just practise until you can do it. Practise until you cannot fail.

Transfer Exercise: "Think about a task you might be asked to do in a real job. Write down the steps you would take. Then practise those steps until they become automatic."

Professional Connection: Every office job requires the skills taught in this course. Receptionists, administrators, sales officers, teachers, accountants, managers â€” everyone. The ability to operate a computer independently is the foundation of all professional digital work.

K. COMMON MISTAKES AND TROUBLESHOOTING (5 minutes)

Mistake 1: Forgetting to Save the Document

Symptoms: The learner types the paragraph in Word but does not save it. **Likely Cause:** Nervousness or rushing. **How to Investigate:** Ask the learner, "Did you save your document?" **Safe Corrective Steps:** Remind the learner to save early and save often. Use Ctrl+S. **How to Confirm the Problem Is Resolved:** The learner saves the document in the correct folder. **How to Prevent Recurrence:** Make saving a habit. Save after every significant change.

Mistake 2: Saving the Document in the Wrong Location

Symptoms: The learner saves the document on the Desktop instead of in the created folder. **Likely Cause:** The learner does not navigate to the correct folder when saving. **How to Investigate:** Ask the learner, "Where did you save the document?" Check the Desktop. Is the file there? **Safe Corrective Steps:** Show the learner how to navigate to the correct folder in the Save dialog. **How to Confirm the Problem Is Resolved:** The learner saves the document in the correct folder. **How to Prevent Recurrence:** Remind the learner to check the address bar in the Save dialog before clicking Save.

Mistake 3: Attaching the Wrong File

Symptoms: The learner attaches a file other than the downloaded file. **Likely Cause:** The learner navigates to the wrong folder when attaching. **How to Investigate:** Ask the learner, "Which file did you attach?" Check the sent email. Is the correct file attached? **Safe Corrective Steps:** Show the learner how to navigate to the Downloads folder when attaching. **How to Confirm the Problem Is Resolved:** The learner attaches the correct file. **How to Prevent Recurrence:** Remind the learner to check the file name before clicking Send.

Mistake 4: Typing the Wrong Email Address

Symptoms: The learner types the wrong email address in the To field. **Likely Cause:** Rushing or not checking the address. **How to Investigate:** Ask the learner, "What email address did you type?" Check the sent email. **Safe Corrective Steps:** Remind the learner to double-check the email address before sending. **How to Confirm the Problem Is Resolved:** The learner types the correct email address. **How to Prevent Recurrence:** Write the email address on the whiteboard and have learners copy it carefully.

Mistake 5: Panicking When Something Goes Wrong

Symptoms: The learner encounters a problem (e.g., the download does not work) and freezes. **Likely Cause:** Lack of confidence or fear of breaking something. **How to Investigate:** Ask the learner, "What happened? What did you try?" **Safe Corrective Steps:** Encourage the learner to stay calm. Remind them that they can fix most problems by trying again or asking a specific question. **How to Confirm the Problem Is Resolved:** The learner troubleshoots the problem independently. **How to Prevent Recurrence:** Remind the learner that making mistakes is part of learning. The important thing is to stay calm and try to fix the problem.

L. SESSION ASSIGNMENT (5 minutes)

Assignment Title: "My Learning Reflection"

Purpose: To encourage the learner to reflect on their learning and identify areas for continued growth.

Realistic Scenario: "You have completed the Typing & Computer Basics course. Your instructor asks you to write a short reflection on what you have learned, what you found challenging, and what you want to learn next."

Detailed Instructions:

1. Open Microsoft Word.
2. Write a reflection that includes:
    - Your name and the date
    - Three things you learned in this course
    - Two things you found challenging

- One thing you want to learn next
- A sentence about how you feel now compared to how you felt in Session 1

3. Save the file on the Desktop with the name "My Learning Reflection."
4. Show the saved file to the instructor before leaving.

Required Deliverables:

- A document named "My Learning Reflection" saved on the Desktop
- The document contains: three things learned, two challenges, one next step, one feeling comparison

Submission Format:

- The file must be saved on the Desktop of the academy machine
- The learner must show the instructor the saved file before leaving

Deadline Recommendation:

- Before leaving the session (in-class assignment)

Marking Rubric:

Criterion	Excellent (5)	Good (3)	Needs Improvement (1)
Three things learned	Three specific, accurate points	Two specific points	One or vague points
Two challenges	Two specific, honest challenges	One specific challenge	Vague or missing
One next step	Clear, specific goal	Present but vague	Missing
Feeling comparison	Insightful, honest reflection	Present but generic	Missing
File saved correctly	Saved on Desktop with correct name	Saved but wrong location or name	Not saved

Total: 25 marks

Common Mistakes to Avoid:

- Writing vague statements (e.g., "I learned a lot") without specifics
- Not saving the file
- Copying from another learner

Instructor Reference Solution:

Three Things I Learned:

1. I learned how to turn on a computer and log in correctly.
2. I learned how to create folders and organise my files.
3. I learned how to send professional emails with attachments.

Two Things I Found Challenging:

1. I found it hard to type without looking at the keyboard.
2. I found it confusing to tell the difference between safe and unsafe websites.

One Thing I Want to Learn Next: I want to learn how to use Microsoft Excel to create spreadsheets.

How I Feel Now: In Session 1, I was nervous and did not think I could use a computer. Now I feel confident and ready to learn more.

M. KNOWLEDGE CHECK (15 minutes)

Quiz

Instructions: Answer all 20 questions. Choose the best answer for multiple-choice questions. Write in full sentences for short-answer questions.

Section A: Multiple Choice (10 questions, 2 marks each)

1. What are the five main parts of a computer? a) Monitor, keyboard, mouse, CPU, speakers b) Monitor, keyboard, mouse, printer, scanner c) Screen, keyboard, mouse, hard drive, RAM d) Monitor, keyboard, mouse, webcam, microphone
2. What does CPU stand for? a) Central Processing Unit b) Computer Personal Unit c) Central Program Utility d) Computer Processing Unit
3. What is the home row on a keyboard? a) The top row of letters (QWERTY) b) The middle row of letters (ASDF JKL;) c) The bottom row of letters (ZXCV) d) The number row (12345)
4. What does Ctrl+Z do? a) Copy b) Paste c) Undo d) Save
5. What is the internet? a) A single large computer b) A giant network of connected computers c) A type of software d) A search engine
6. What does the padlock icon in the address bar mean? a) The website is loading b) The website is secure c) The website is broken d) The website is an advertisement
7. What are the five parts of a professional email? a) To, CC, BCC, attachment, send b) Subject, greeting, body, sign-off, name c) Username, domain, password, inbox, sent d) Browser, URL, search, download, bookmark
8. What is phishing? a) A type of computer virus b) A fake email or website that tries to steal your information c) A way to speed up your internet d) A type of online game
9. What is the correct way to shut down a computer? a) Pull the plug b) Press and hold the power button c) Click Start, click Power, click Shut down d) Close the laptop lid
10. What is the difference between a file and a folder? a) A file is a container, and a folder is a single piece of information b) A file is a single piece of information, and a folder is a container c) A file and a folder are the same thing d) A folder is a type of file

Section B: Short Answer (5 questions, 4 marks each)

11. What are the five things you can do with a mouse?
12. What is the difference between a desktop computer and a laptop computer?
13. What are three things you should check before entering your password on a website?
14. What is the difference between Reply and Reply All?
15. Why is it important to use descriptive file and folder names?

Section C: Scenario-Based (2 questions, 5 marks each)

16. You receive an email from "your bank" asking you to click a link and enter your password. The sender's email address is "security@bank-verify-login.com." Is this email safe or unsafe? Explain why.
17. Your friend says, "I saved my file but I cannot find it. Where did it go?" What are three things you would tell your friend to check?

Section D: Practical Identification (3 questions, 5 marks each)

18. Open File Explorer. Create a new folder on the Desktop called "Test Folder." Rename it to "CEA Test." Delete it and restore it from the Recycle Bin.
19. Open your browser. Navigate to google.com. Search for "Cyber Elias Academy." Bookmark the CEA website.
20. Open Gmail. Compose a new email to yourself with the subject "Test Email" and a short body. Send it. Check your Sent folder to verify it was sent.

Answer Key

Section A: Multiple Choice

1. a) Monitor, keyboard, mouse, CPU, speakers
2. a) Central Processing Unit
3. b) The middle row of letters (ASDF JKL;)
4. c) Undo
5. b) A giant network of connected computers
6. b) The website is secure
7. b) Subject, greeting, body, sign-off, name

8. b) A fake email or website that tries to steal your information
9. c) Click Start, click Power, click Shut down
10. b) A file is a single piece of information, and a folder is a container

Section B: Short Answer

11. Left-click, right-click, double-click, drag-and-drop, scroll.
12. A desktop sits on a desk and has separate parts (monitor, keyboard, mouse, system unit). A laptop is one single unit that you can carry around.
13. (1) The URL â€" does it match the real website? (2) The padlock icon â€" is there a padlock in the address bar? (3) The design â€" does the website look professional?
14. Reply responds only to the sender. Reply All responds to everyone who received the original email. Use Reply unless everyone needs to see the response.
15. Descriptive names tell you what is inside a file or folder without opening it. This makes it easy to find things quickly. Vague names like "Document1" or "Stuff" do not help you find anything.

Section C: Scenario-Based

16. Unsafe. The sender's email address is "bank-verify-login.com," not the real bank's domain. The email asks you to click a link and enter your password. A real bank will never ask for your password by email. This is a phishing attempt.
17. (1) Check the Desktop â€" the file might be there. (2) Open File Explorer and search for the file name in the search box. (3) Check the Downloads folder â€" the file might have been saved there by default.

Section D: Practical Identification

18. The learner successfully creates, renames, deletes, and restores the folder.
19. The learner successfully navigates to Google, searches, and bookmarks the CEA website.
20. The learner successfully composes, sends, and verifies the email.

N. REFLECTION AND RECAP (5 minutes)

Plain-English Summary

Today you demonstrated that you can use a computer independently. You turned on the computer, created a folder, typed a document, saved it, downloaded a file from the internet, attached it to an email, and sent it â€" all without help. You also completed a knowledge check quiz and reflected on your learning. You have completed the Typing & Computer Basics course. You should be proud of yourself.

Five Important Takeaways from the Entire Course

1. A computer is a tool. It is not magic. It does exactly what you tell it to do.
2. The five main parts are: monitor, keyboard, mouse, system unit (CPU), and speakers.
3. Good file organisation and internet safety are professional skills, not optional extras.
4. Email is the most important professional communication tool in the world.
5. You are now digitally independent. You can sit down at any computer and get to work.

Questions That Help You Recognise What You Can Now Do

- Can you turn on a computer and log in without help?
- Can you create folders and organise your files?
- Can you browse the internet safely?
- Can you send professional emails with attachments?
- Can you type using the correct finger placement?
- Can you explain what you have learned to someone else?

What Comes Next

You have completed the foundation course. You are now ready for the next level. At Cyber Elias Academy, you can continue with:

- **Microsoft Office** â€" Learn Word, Excel and PowerPoint in depth.
- **Graphic Design** â€" Learn to create professional designs.
- **Web Design** â€" Learn to build websites.
- **Data Entry** â€" Learn to handle data accurately.
- **Computer Repairs** â€" Learn to diagnose and fix computer problems.
- **Digital Marketing** â€" Learn to promote businesses online.
- **Content Creation** â€" Learn to create photos, videos and written content.

The skills you learned today are the foundation for all of these courses. You are ready.

O. INSTRUCTOR EVALUATION NOTES

Observable Signs of Competence

- The learner completes all 13 steps of the capstone independently.
- The learner uses correct procedures throughout the workflow.
- The learner demonstrates safe browsing habits.
- The learner types using correct finger placement.
- The learner troubleshoots problems independently.
- The learner scores at least 50% on the knowledge check quiz.
- The learner's typing speed has improved from their Session 2 baseline.

Common Misconceptions

- **"I can just learn this on my own."** Some learners think they do not need a course. They may be right â€" some people can figure things out on their own. But most people benefit from structured, guided learning. This course gives them a foundation that self-taught learners often lack.
- **"I will never need to use a computer."** Some learners think they will avoid computers in their daily life. In 2026, this is almost impossible. Banking, communication, shopping, education, government services â€" everything requires basic computer skills.
- **"I am too old to learn this."** Some older learners feel they cannot learn new technology. This is not true. Age is not a barrier to learning computer skills. Patience and practice are the only requirements.

Suggested Remedial Exercises

- For learners who do not pass the capstone: Allow them to practise on academy machines during opening hours. Provide a step-by-step guide they can follow. Let them retake the assessment when they are ready.
- For learners who score below 50% on the knowledge check: Review the questions they got wrong. Provide additional practice exercises. Let them retake the quiz.
- For learners whose typing speed has not improved: Provide a daily typing practice plan. Recommend free typing practice websites. Measure their speed again in one month.

Differentiation Guidance

Level 1 â€" Supported (for learners who struggle):

- Allow extra time for the capstone assessment.
- Provide a printed step-by-step guide they can follow.
- Offer one-on-one support during the assessment.
- Allow them to retake the assessment after additional practice.

Level 2 â€" Independent (standard):

- Complete the capstone assessment as written.

- Answer all knowledge check questions.
- Complete the reflection assignment.

Level 3 â€" Challenge (for learners who finish early):

- Ask the learner to create a more detailed document (e.g., a one-page CV).
- Ask the learner to send an email to multiple recipients using CC and BCC.
- Ask the learner to research and write down three more things they want to learn about computers.

CERTIFICATE SIGN-OFF

Learner Name: _____

Date: _____

Capstone Assessment Result: Pass / Not Yet Competent

Knowledge Check Score: _____ / 100

Typing Speed (Session 2 Baseline): _____ WPM

Typing Speed (Session 6 Final): _____ WPM

Improvement: _____ WPM

Instructor Signature: _____

Certificate Awarded: Yes / No

Comments:

End of Session 6 â€" End of Course

Congratulations! You have completed the Typing & Computer Basics course at Cyber Elias Academy.

Next Step: Continue your learning with Microsoft Office, Graphic Design, Web Design, or another CEA course.
