Video Editing — Course Summary

A quick reference of what is covered and what you will learn in each session.

QUICK NAVIGATION

Session 01 — Video Editing Foundations and Workflow

Session 02 — Editing Software and Interface

Session 03 — Cuts Pacing and Story

Session 04 — Audio Editing and Mixing

Session 05 — Colour Text and Graphics

Session 06 — Effects Transitions and Motion

Session 07 — Export Settings Formats and Delivery

Session 08 — Client Work Revisions and File Management

Session 09 — Capstone Edit a Complete Video Project

SESSION 01

Video Editing Foundations and Workflow

Week 1 â€" Module 1: Foundations and Story

WHAT YOU WILL LEARN

- ✓ **Explain** — in their own words what an editor actually does â€" deciding what the audience sees, in what order, and for how long â€" and why editing is a *decision-making* job, not a button-pushing job.
- ✓ **Describe** — the full post-production workflow in order, from ingest (receiving footage) to archive (storing the finished project), using all ten stage names correctly.
- ✓ **Organise** — a footage pack into a clean folder structure with consistent file names, so every clip can be found in under ten seconds.
- ✓ **Back up** — footage so that every clip exists in **two separate places** before editing begins, and explain why "one copy is no copy."
- ✓ **Choose** — the correct aspect ratio (16:9, 9:16, 1:1 or 4:5) for a given platform â€" YouTube, TikTok/Reels, Instagram feed, WhatsApp Status â€" and explain the choice in one sentence.
- ✓ **Set up** — a project correctly: aspect ratio, resolution and frame rate decided **before** the first cut, and state why setup mistakes are expensive to fix later.

SESSION 02

Editing Software and Interface

Week 1 â€" Module 1: Foundations and Story

WHAT YOU WILL LEARN

- ✓ **Open** — CapCut on desktop and mobile, create a new project, and set the aspect ratio, resolution and frame rate correctly before importing.
- ✓ **Import** — footage from an organised folder into the media library, and explain why we import from a clean, named folder.
- ✓ **Identify** — the four main areas of the CapCut interface â€" media library, preview window, timeline and tools panel â€" and state what each does.
- ✓ **Place** — clips on the timeline in story order to build a **first assembly**, with no music, text or effects.
- ✓ **Split, trim and reorder** — clips using the basic tools, and explain what the playhead is and how it controls where an edit happens.
- ✓ **Save and name** — the project file correctly, and explain why the project file is not the video.

SESSION 03

Cuts Pacing and Story

Week 1 â€" Module 1: Foundations and Story

WHAT YOU WILL LEARN

- ✓ **Name and demonstrate** — the five main cut types â€" straight cut, jump cut, cut on action, match cut, and the J-cut/L-cut â€" and explain when each is used.
- ✓ **Select cut points deliberately** — â€" choosing the exact frame to cut on, and justifying the choice in one sentence.
- ✓ **Explain** — the difference between a J-cut (audio leads picture) and an L-cut (picture leads audio), and use at least one of them around dialogue.
- ✓ **Analyse and adjust pacing** — â€" identifying a sequence that drags or feels frantic, and explaining what to cut or hold to fix it.
- ✓ **Describe** — the short-video story shape â€" hook, beginning, middle, end, payoff â€" and build a short edit with that shape.
- ✓ **Use B-roll purposefully** — â€" covering a jump cut and adding meaning, not just filling space.

SESSION 04

Audio Editing and Mixing

Week 2 â€" Module 2: Craft

WHAT YOU WILL LEARN

- ✓ **Explain** — why audio matters more than picture for watch-through, and state the rule: "audiences forgive a soft picture, but they will not watch bad sound."
- ✓ **Set relative levels** — for dialogue, music and effects so the voice is clearly above the music and the music supports rather than fights.
- ✓ **Duck music under voice** — â€" lowering the music volume automatically or manually when someone is speaking.
- ✓ **Apply noise reduction** — to a clip with light room noise, and explain when it helps and when it hurts.
- ✓ **Record a clean voiceover** — using a phone or computer, with a simple script and a quiet room.
- ✓ **Sync cuts to a music beat** — and explain why beat-sync makes a video feel professional.
- ✓ **Check loudness** — by meter and by ear, and state what platforms expect.

SESSION 05

Colour Text and Graphics

Week 2 â€" Module 2: Craft

WHAT YOU WILL LEARN

- ✓ **Explain** — the difference between colour correction (fixing) and colour grading (styling), and why beginners master fixing first.
- ✓ **Correct exposure and white balance** — on a clip â€" making a dark clip brighter and a warm/cool clip neutral.
- ✓ **Match two clips** — of the same scene so they look like they belong together.
- ✓ **Apply a light, tasteful grade** — that suits the story â€" without destroying the natural look.
- ✓ **Create readable titles and lower thirds** — that are correctly spelled, well placed and timed.
- ✓ **Add captions** — that are correctly spelled, timed to the speech, and inside safe areas on every platform.

SESSION 06

Effects Transitions and Motion

Week 2 â€" Module 2: Craft

WHAT YOU WILL LEARN

- ✓ **Explain** — why the best transition is usually no transition, and identify the tasteful set: straight cut, dissolve, and a sparing whip or slide.
- ✓ **Apply a dissolve** — between two clips where it helps â€" and remove it where it hurts.
- ✓ **Animate with keyframes** — â€" including a slow zoom on a still image or video clip.
- ✓ **Create a speed ramp** — â€" speeding up and slowing down a clip for dramatic effect.
- ✓ **Build a basic motion title** — â€" text that moves with purpose.
- ✓ **Apply the "does this help the story?" test** — to every effect â€" and delete every effect that does not earn its place.

SESSION 07

Export Settings Formats and Delivery

Week 3 â€" Module 3: Polish and Deliver

WHAT YOU WILL LEARN

- ✓ **Explain** — in plain English what a codec, a container, resolution, frame rate, bitrate and aspect ratio are â€" and why each matters for delivery.
- ✓ **Choose the correct export settings** — for a given platform â€" YouTube, Instagram, TikTok, WhatsApp â€" including codec, resolution, frame rate and bitrate.
- ✓ **Export a video** — from CapCut to a specified platform without visible quality damage.
- ✓ **Check the exported file** — against the brief â€" resolution, aspect ratio, file size and playback quality.
- ✓ **Explain** — how compression can be invisible or ruin a video â€" and how to avoid the ruin.
- ✓ **Name** — the common export mistakes and how to fix them.

SESSION 08

Client Work Revisions and File Management

Week 3 â€" Module 3: Polish and Deliver

WHAT YOU WILL LEARN

- ✓ **Extract requirements from a written brief** — â€" identifying the deliverables, the audience, the platform, the deadline and the scope.
- ✓ **Handle a revision round** — â€" making agreed changes, keeping a revision log, and avoiding endless free rework.
- ✓ **Version files honestly** — â€" using a clean naming convention (`_v1`, `_v2`, `_Approved`) instead of `_final`, `_final2`, `_finalfinal`.
- ✓ **Name and archive deliverables** — â€" so they can be found later and the project can be reopened.
- ✓ **Quote a price in naira** — for a defined editing job â€" using a clear method based on hours and scope, not a guess.
- ✓ **Write a short handover note** — â€" telling the client what was delivered, in what format, and what to do with each file.

SESSION 09

Capstone Edit a Complete Video Project

Week 3 â€" Module 3: Polish and Deliver

WHAT YOU WILL LEARN

- ✓ **Set up a complete project** — â€" aspect ratio, resolution and frame rate chosen and stated before editing, with a clean folder structure and backup.
- ✓ **Build a coherent edit** — from the supplied footage pack â€" clear beginning, middle and end; no accidental gaps; no unused clips left in the timeline.
- ✓ **Demonstrate deliberate cutting** — â€" at least three named cut types used on purpose, including one J-cut or L-cut around dialogue.
- ✓ **Deliver balanced audio** — â€" voice clearly above music; music ducked under speech; sensible loudness.
- ✓ **Apply corrected colour and readable text** — â€" exposure and white balance corrected; a title, at least one lower third, and captions â€" correctly spelled, timed and inside safe areas.
- ✓ **Apply restrained motion** — â€" at least two intentional motion techniques and no gratuitous effects.
- ✓ **Export two correctly named files** — matching the brief â€" a 16:9 file (1920Ã—1080) and a 9:16 file (1080Ã×1920), both with captions.
- ✓ **Write a short handover note** — â€" what was delivered, in what format, and what the client should do with each file.
- ✓ **Present and defend the edit** — in a viva â€" explaining the key decisions clearly and accurately under questioning.
